Duration	Organization	Designation
Mar, 2023 – Oct 2024	Learniphi Technology Pvt Ltd	Senior Software Test Engineer
Oct 2019 – Mar, 2023	Web crypt Technology Pune	Software Test Engineer

Key Projects:

Project: #1

Learning Pathway

Client: **Learniphi**

Description: It's completely based on Open edx. Open edX is the underlying open-source software framework that forms the basis for the learning platform. It consists of two main parts: CMS (Content Management System) and LMS (Learning Management System). This is the part of Open edX where course content is created, updated, and managed. In the CMS (Studio), instructors can design and structure their courses, manage multimedia content, and create assessments. The LMS (Learning Management System) is the user-facing side of Open edX. Users can access the platform, purchase courses, and engage in the learning content provided. Upon completion of a course, certificates are generated by the admin. This is a common feature in online learning platforms to provide learners with proof of completion. The platform offers courses from various sources, including Open edX.

Coursera, Udemy, and potentially other providers.

Duration: Mar 2023 – Oct 2024

Responsibilities: - • Performing functional feature testing including regression testing. • Participating in Test Planning and Test Strategy creation. • Test Case creation, test execution and issues/bugs reporting. • Worked effectively with Developers, Project Management to achieve high quality, release deadlines. Prepared Testing Weekly Progress Report • Working on preparing test cases as well as test suite for selenium WebDriver • Executing test cases and test suite for automation.
Role Description: Senior Software Test Engineer Environment: Selenium WebDriver, BDD Framework, Oracle Database, Java Team Size: 5
Project: #2 Adactic
Description: Using this system user can view and check for various rooms available and simultaneously book them by making online payment via credit card. The system calculates the total cost on booking the services. Once the user makes the payment, system will provide online receipt to the user. User can view the room booking in an effective graphical user interface. Since room bookings will be displayed in effective graphical user interface user will get to know which rooms are booked and how many rooms are available for booking. Using this application user can select the room according to his preference. The rooms which are already will be disabled and the rooms which are available user just have to select it and then proceed to payment option. Once user makes the payment system will generate receipt and it will be sent to respective user's email id and it will be reported to the admin, when user visits the hotel, he must show the receipt for the accommodation
Duration: Oct 2019 – Mar 2023.
Responsibilities: - • Understanding the Requirements and Functional Specifications of the Project. • Identified Test Scenarios required for testing • Prepared and Executed Test Cases as per System Requirements. • Defect Reporting and Tracking using Bugzilla • Extensively performed Manual Testing process to ensure the quality of the software. • Created automation scripts based on Hybrid Framework. • Selenium was used to generate automated test scripts for functionality.
Role Description: Manual Testing, Automation Environment: WebDriver, TestNG, Java, JSP. Team Size: 10
