OBJECTIVE

Data Analyst with 4+ years of experience seeking a challenging position to leverage expertise in data analysis, visualization, and storytelling to uncover actionable insights and drive business growth.
Rich experience of building user friendly reports to give better visibility of business and aid Strategy & Planning.

- Extensive experience in R and Python.
- Designed and implemented SQL associated with database.
- Experience advanced excel.
- Data Visualization tools like excel, power BI.

EDUCATION

B. TECH (Biju Patnaik University of Technology)	2006-2010
Participated in consulting project Power Plant engineering for NTPC.	
Higher Secondary Education +2 Orissa Education Board	2004-2006
Secondary School Education ICSE Board, Orissa	Pass Out 2004

EXPERIENCE

<u>Myntra designs Pvt Ltd, Bangalore</u>	2021-Till Date
Role: Senior Officer (Data Analyst) As part of Supply Chain Management at Myntra. Have to monitor & prepare report of key metrics related to Business, Customer and Operations.	
Responsibility: Performance Metrics: Creating Vendor Metrics monitoring, Customer Metrics monitoring, Business Metrics monitoring & Achievement. Daily, weekly, monthly, quarterly level planning & monitoring at BU BAG level of KPIs. Developing dashboard to Monitor & report key metrics – Business, Customer and Operations. Responsible for analyzing and interpreting data to inform decision-making processes and identify assortment and portfolio gaps.	
Data Analysis: Support business decisions by - formulating hypothesis, structuring the problem, analyzing relevant data to verify hypothesis and prepare documentation to communicate the results with insights.	
Predictive Analysis: Utilize different methods to forecast trends and customer behavior increase standard within group of customers enabling in decision-making.	
Collaboration & Communication: Effectively communicate findings and recommendations and impact to stakeholders.	
Project Involvement: Handling large data sets and relational databases. work with others in a fast-paced, team environment and interact effectively with all levels of management. Knowledge of advanced MS Excel, Python or R and SQL.	

Proziod analytics Pvt Ltd, Bangalore**2019-2021****Role:** Data Analyst

Responsibility: Creating a workflow process to automate the validation of bills, Verifying the accuracy of the utility bills (power and gas) for the clients.

Processing, cleaning and verifying the integrity of data used for analysis.

Good knowledge in Excel (Lockups/Match, Pivot, Syntax, Index, Circular Reference, Data Validation, Conditional Formatting, etc).

Project Involvement: Collecting data and sending the right content over the right channel at the right time to client. Using tool MySQL, Advanced Excel, SQL and reporting.

Vaidehi Software Technology, Bangalore**2018-2019****Role:** Data Analyst

Responsibility: Using SQL Fetching raw data of demographics, product purchase history, customer information of registered customers. Data segmentation techniques applied on the data set and identified the group of customers of similar characteristics and target them better and scalable. Variables were checked for normality and used EDA to detect the correlation between the variables and ran regression equation.

Project Involvement: Marketing Data Analytics - Successful Marketing is sending the right content over the right channel at the right time to the right Customer. Using tool MySQL, Advanced Excel.

Shimizu Corporation India Pvt. Ltd. Bangalore**2015-2018****Role:** MEP Senior Design Engineer

Responsibility: Coordination with architectural and structural and all MEP work. Creating Architectural Air conditioning and Ventilation, firefighting and construction drawing. Checking project planning, schedule and reporting to project management.

Project Involvement: Unicharm India Pvt. Ltd, Bangalore, Toyota motors, Bangalore, Amazon Warehouse, Hyderabad, Keihin fie project (subsidy-Honda Auto), Bangalore

CERTIFIED COURSES:

Data science and Machine learning, Jigsaw Academy School of Analytics, Bangalore

- Full stack data science and machine learning program.
 - Certified in Telecom churn rate Analytics by Jigsaw Academy
-

TECHNICAL EXPERTISE & PROJECTS:

Tools: R & python platform, Excel, SQL. (Open to learn new tools and can learn quickly).

Techniques	Real time Projects
Statistical tests	-T-test-Hypothesis testing of means -ANOVA-Comparison of means of two groups by shelf height and aisle placement in retail stores -Chi-square Tests-Measures of association/ Correlation, Goodness of fit
Linear regression	-Predicting price of used car by modeling its characteristics -Market mix model
Logistic regression	-Application credit scoring -Brand perceptions, whether customer consider the product as “good for them”
Clustering/Profiling	-Clustering of stores using volume and type of sales -RFM analysis
Decision trees	-Defend, Grow, Exit segmentation -Predicting outcome of cricket match
Time series forecasting and ARIMA	-Predicting Auto sales -Predicting number of airline passengers
Neural networks	- Back Propagation Neural networks used to predict “buy/sell/hold” point of a script in Stock market.

CASE STUDIES / PROJECTS

○ *Price Prediction – Linear Regression(python)*

Worked on a regression model to predict the price of a car as a function of various attributes.

○ *Horse bred classification (Logistic Regression)*

Predictive modeling done for the US thoroughbred Horse Racing Industry with the help of historic race data. Regression analysis was done to form a model that would determine the race characteristics which maximizes the earnings and profits for the horse racing industry.

○ *Segmentation – (K-Means)*

Store segmentation using cluster analysis had been done to identify the buying behavior of a retail chain of 515 stores spread across Tamil Nadu and Karnataka.

○ *Fraud Analysis - Decision Tree (C 5.0) (R)*

To detect the Probability of frauds from historical data.

The Bank's Credit department is trying to identify the people who are committing fraud in paying their loans to the bank. Specifically, the bank wanted to know to whom they should sanction the loan based on the previous behavior of the customers towards their banking nature and their incomes, Occupations and few other attributes. Based on the Cross Table values the accuracy of the model is predicted and it's found to be 91.50 %.

○ *Data Science Competitions on KAGGLE & Analytical Vidhya -*

Predict Survival of Passengers on the Titanic Ship using various classification algorithms.

Predict House Prices based on 100+ predictors using Supervised and Unsupervised learning algorithms.

Loss given default by one of the leading Bank with the help of logistic regression based on classification mechanism.
