WORK HISTORY

Infosys

Data Engineer, 07/2022 – 07/2024

- Leveraged Azure **Databricks** to extract raw data from diverse sources and stored it in the data lake via mount points.
- Transformed source files from the data lake into Delta tables using Azure Databricks.
- Employed **Medallion Architecture** for efficient data processing at different stages.
- Stored data in **SCD Type 2** format to prevent data loss and enhance reporting accuracy.
- Implemented **PySpark** logic, DataFrame API, and Spark SQL for data cleaning and transformation.
- **Orchestrated** data ingestion, Databricks jobs and notebooks in **Azure Data Factory**.
- Improved execution time by 20% through various Spark optimization techniques
- **Technologies Used:** Azure Databricks, Spark, Python, Azure ADLS gen 2.

PROJECTS

End-to-End ETL Pipeline: Streaming, Processing, and OLAP with Star Schema

GitHub Link: <https://github.com/VeenaBhyrava/ordersDimModelling>

- Designed and implemented a robust data pipeline for an e-commerce website, transforming order transactions into an OLAP database with star schema
- Collected real-time orders data from **Confluent Kafka**, handling up to **1000 orders per minute**, and stored in a raw table in **POSTGRES**.
- Converted raw data into facts (e.g., order amounts) and dimensions (e.g., customer, address, merchant), ensuring referential integrity between them.
- Implemented **Change Data Capture** (CDC) for all dimension tables to maintain accuracy and eliminate duplicates.
- Engineered comprehensive data transformation scripts in **Python**, improving data retrieval speeds by 40% for analytical queries.
- **Technologies Used:** PostgreSQL, Confluent Kafka, Python, dimensional modelling.

Real-Time Data End-To-End Pipeline with Databricks

- Utilized Spark Structured Streaming to perform ETL on streaming data received from Kafka, following the **Medallion architecture**.
- Incorporated Auto Loader in DLT pipeline, ensuring seamless schema evolution and incremental data loading.
- Developed a **CI/CD workflow** to automate production and development workspaces, reducing deployment time by 50%.
- **Technologies Used:** Databricks, Confluent Kafka, Azure Data Lake, Spark Structured Streaming, CI/CD

TECHNICAL SKILLS

- SQL
- Python
- Java
- Apache Spark
- Azure Databricks
- Azure Data factory
- DataFrame API
- Spark Structured Streaming
- Confluent Kafka
- Data Warehousing
- Dimensional Modeling
- MySQL
- PostgreSQL
- Basic Bash Scripting
- Basic CI/CD Workflows

CERTIFICATIONS

Databricks Certified Data Engineer Associate

EDUCATION

B.Tech in Mechanical Engineering,
05/2018 – 05/2022

Jawaharlal Nehru Technological University, Anantapur - Anantapur, Andhra Pradesh

- Gained NCC 'C' certificate
- GPA: 8.8
