Overview

A recent graduate in Computer Engineering with hands-on experience in web development and AI-driven research. Highly organized and self-motivated, with strong skills in Python, Java, and machine learning frameworks. Eager to leverage my education and technical expertise to contribute to innovative projects and drive impactful results in the tech industry.

Professional Experience

International Internship Pilot Program (IIPP), Research Intern

May 2024 – Jul 2024

TAIWAN

- Successfully cracked one of the most prestigious fully-funded internship programs in Taiwan.
- Developed and fine-tuned models using GPT-2 to extract useful information from Cyber Threat Intelligence (CTI) reports.
- Improved model performance by experimenting with various fine-tuning techniques and hyperparameter adjustments.

Interfax IO, Web Design Intern

Aug 2023 – Oct 2023

Remote

- As an intern web developer at Interfax, I had the opportunity to contribute to the development and maintenance of the company's web applications and digital assets.
- This experience allowed me to enhance my technical skills and gain valuable insights into the field of web development.

Education

B.Tech, Presidency University

Aug 2020 – Nov 2024

Bachelor of Technology in Computer Engineering

PUC, Huda National College

Jun 2018 – Jun 2020

Pre-University in PCMC, Karnataka State Board

Skills

- **Programming Languages:** Python, Java, C, SQL
- **Machine Learning & AI:** TensorFlow, PyTorch, Scikit-learn, GPT-2, LLMs, NLP, Data Analysis
- **Frameworks and Libraries:** OpenCV, Pandas, Seaborn, Streamlit
- **Developer Tools:** Git, GitHub, Windows, VS Code, Prompting, Vercel, Eclipse, Ubuntu, MATLAB
- **Web Technologies:** HTML, CSS, JavaScript, Bootstrap, MySQL, PHP
- **Relevant Coursework:** Machine Learning and Deep Learning, Fundamentals of Artificial Intelligence, Prompt Engineering, Large Language Models, Web 2.0, Web 3.0, Blockchain, Object Oriented Programming, Front End Full Stack Development, Database Management System, Cloud Computing
- **Soft Skills:** Analytical Thinking, Adaptability, Collaboration, Time Management, Emotional Intelligence, Problem-solving, Teamwork

Final Year Project

🔗 Multiple Disease Prediction System using ML 🔗

Project Description

Led a team of three in the successful completion of a major final year project titled 'Multiple Disease Prediction System using ML' at Presidency University. Developed an advanced predictive system employing Machine Learning techniques to forecast the onset of Diabetes, Heart Disease, and Parkinson's Disease based on patient symptoms and historical data.

Report Contribution 🔗

Produced a comprehensive project report encompassing the project's methodology, findings, and implications. Demonstrated analytical and problem-solving skills in presenting a thorough analysis of patient data and symptoms. The report served as a testament to my ability to communicate complex technical concepts effectively.

Journal Publication 🔗

Contributed to the publication of research findings in a respected journal. The published paper highlighted the innovative approach taken in disease prediction, showcasing a commitment to impactful research and recognition in the academic community. This experience underlines my dedication to knowledge in the field of healthcare through practical applications of Machine Learning.

Open Source Projects

- **InfoBuddy-with-LLAMA-3.1**  LLAMA 3.1 | Python
Developed a powerful chatbot designed to assist with day-to-day life problems and healthcare, providing clinicians with rapid access to relevant research, treatment options, and patient history, enhancing care quality and efficiency.
- **Event Extraction from CTI Reports Using LLM BERT**  BERT | Python
Developed a sophisticated system to extract critical events from Cyber Threat Intelligence (CTI) reports using BERT, enabling enhanced threat detection and response through advanced language model techniques.
- **WhatsApp Chat Analyzer**  Python | Shell
Created a Python-based application to analyze WhatsApp chat data, delivering key insights and visualizations such as message trends, user participation, and activity patterns, helping users understand communication dynamics.
- **Travel-and-Tourism-Management-System**  Java | MySQL | AWT | Servlet
Designed and implemented a desktop-based application for managing travel and tourism operations, utilizing core Java concepts with a Swing-based GUI and MySQL integration for robust data management.
- **Amber Perfumes**  HTML | CSS | JavaScript | Servlet | JSP | MySQL
Built a full-stack website for fragrance enthusiasts, seamlessly integrating front-end and back-end technologies to create a digital platform for exploring and purchasing luxury perfumes.

Note - The above are some of my best projects. Please check my GitHub profile for more

Certifications

- **Data Analytics and Predictive tech**, IIT (BHU), Varanasi
- **Real Life Machine Learning and Data Science**, Udemy
- **HTML, CSS, and Javascript for Web Developers**, Coursera

Publications

- **MULTIPLE DISEASE PREDICTION SYSTEM USING MACHINE LEARNING** 
A machine learning system for early prediction of diabetes, heart disease, and Parkinson's by analyzing medical data to enable timely interventions through a user-friendly web interface. This was our Final year Project done by group of 3 later on Published on this Journal
Mohammed Azeez, "Multiple Disease Prediction Using Machine Learning," 2024.

Note - I am Working on another Paper called 'Decentralized Cyber Threat Intelligence (CTI) Platform with LLM-Based Analysis'
it will be published soon in Cryptology and Information Security Conference 2024
