SUMMARY:

Results driven Associate Data Scientist with 3+ years of experience leveraging advanced analytics techniques and machine learning algorithms to extract actionable insights from complex datasets. Skilled in data cleansing, modelling and deployment of predictive analytics solutions.

EXPERIENCE:

Associate Data Scientist | Innodatatics | Hyderabad, TS | May 2022 – Present

- Conduct exploratory data analysis (EDA) on large datasets to draw insights, patterns and trends
- Automate and develop data pipelines to streamline data Wrangling/Munging/Cleansing
- Developed predictive models for machine downtime and cement demand forecasting using machine learning algorithms such as naïve bayes, decision tree, regression, etc.
- Implemented deep learning models for bird detection project
- Collaborated with cross functional teams to deploy machine learning models into production environments
- Evaluated model performance using appropriate metrics and iteratively refined models to improve accuracy and robustness

Service Engineer | Euroteck Environmental Pvt Ltd | Hyderabad, TS | Jan 2021 – April 2022

- Developed interactive reports and dashboards in PowerBI to present key insights and facilitate data driven decision making
- Conducted thorough analysis of large data using Python, SQL and Excel
- Handling multiple clients across India to track complaints and product spare sales
- Assisted in developing and maintaining the company's database
- Tracking the Quotations, Sale Orders and Invoices for all the spare orders using the SAP SD module

EDUCATION:

- Bachelor of Engineering in Mechanical | Sathyabama University | Chennai, TN | 2020
CGPA – **8.69**
- Intermediate Education | Narayana Junior College | Vijayawada, AP | 2016
CGPA – **9.53**
- Secondary Education | Sri Chaitanya High School | Vijayawada, AP | 2014
CGPA – **9.7**

SKILLS:

- Python (Pandas, Numpy, Sklearn, etc.)
- Structured Query Language (MySQL)
- Machine Learning Algorithms (Regression, Classification, Clustering, Dimension Reduction, Recommendation Engine, etc.)
- Deep Learning (Neural Networks, Tensorflow, Keras)
- Data Visualization (Matplotlib, Seaborn, Plotly)
- Model Evaluation and Validation
- Business Intelligence tool (PowerBI)
- Deployment tools (Flask, Streamlit)
- Evidently for monitoring and maintenance
- Strong communication skills, able to present complex technical concepts to non-technical stakeholders

PROJECTS:

Project 1:

Business Problem: CNC Machines are failing due to unplanned reasons.

Technology Stack:

- Database: MySQL
- Algorithms: Naïve Bayes, KNN, Decision Tree, Ensemble techniques, ANN, etc
- Programming Language: Python
- Libraries: Pandas, Numpy, Matplotlib, Sklearn, Feature_engine, Sweetviz
- Visualization tool: PowerBI
- Deployment tool: Streamlit
- Monitoring & Maintenance: Evidently

Project 2:

Business Problem: The customer faces challenges managing varying quantities of cement bags across different locations resulting in increased transportation costs, longer delivery times to high demand areas and customer dissatisfaction.

Technology Stack:

- Database: MySQL
- Algorithms: Time series models & some deep learning algorithms like LSTM, RNN, etc
- Programming Language: Python
- Libraries: Statsmodels, Keras, darts
- Deployment tool: Streamlit

Project 3 (Ongoing):

Business Problem: Bird Detection and Tracking for Healthcare Monitoring (Poultry)

Solution Approach: To develop an AI model that can analyze images of chicks of 7 days, 14 days and 26 days and accurately monitor the health by examining the weight of each chick

using the weighing machine. Using roboflow, annotation and augmentation techniques were applied. The YOLOv8 algorithm was used to build the model.
