

AKSHAY KUMAR

Software Test Engineer

7538880640

akshayrocky901@gmail.com

TamilNadu,Chennai

PROFILE SUMMARY

Software Test Engineer with 3.6 years of hands-on experience in quality assurance and software testing. Adept at designing and implementing comprehensive test plans, test cases, and strategies to ensure the delivery of high-quality software products. Proven expertise in manual and automated testing across various domains, including web and mobile applications.

EDUCATION

B.TECH (MECHANICAL ENGINEERING) PRIST UNIVERSITY MANAMI-NALLUR,SH 49, MAHABALIPURAM , TAMILNADU (2020)

WORK EXPERIENCE

COMPANY NAME - GLOBE ACTIVE TECHNOLOGIES LIMITED (AUG 2020 - TILL DATE)

- Conducting thorough testing of software applications, including functional, regression, and performance testing, to identify and resolve defects before product releases.
- Collaborating with cross-functional teams, including developers and product managers, to understand requirements and ensure comprehensive test coverage.
- Designing and executing test cases, test plans, and test scripts to validate software functionality and ensure adherence to quality standards.
- Utilizing automated testing tools, such as Selenium and JUnit, to streamline testing processes and improve efficiency.
- Investigating and analyzing complex software issues, documenting defects, and working closely with the development team to facilitate timely resolutions.
- Participating in Agile/Scrum meetings to provide testing status updates and address any concerns related to product quality.
- Assisted in the creation and execution of test plans, test cases, and test scripts for various software projects.
- Conducted manual testing of web and mobile applications to identify and report defects, ensuring a smooth and error-free user experience.
- Collaborated with development teams to reproduce and debug reported issues, providing detailed information for efficient troubleshooting.
- Actively participated in team meetings, contributing insights on testing strategies and improvements to enhance overall product quality.

SKILLS

- Test Automation : Selenium
- Framework : Cucumber BDD, TestNG, Data-Driven, POM
- Languages : Core java
- SCM & CICD : GIT & Jenkins
- Defect Management : JIRA
- API - Postman

PROJECT # 2

PROJECT NAME : BARCLAYS BANK UK

DURATION : SEP 2021 - TILL DATE

DOMAIN : BANKING SECTOR

ROLE : SOTWARE TEST ENGINEER

DESCRIPTION :

In this project, our team embarked on a comprehensive data analysis and algorithm development initiative for Barclays Bank UK. The primary objective was to leverage data-driven insights and advanced algorithms to enhance decision-making processes, improve operational efficiency, and drive business growth within the banking sector.

RESPONSIBILITIES :

- Understand the project requirements, especially those related to banking functionalities, and analyze them to ensure clarity and testability.
- Develop comprehensive test plans outlining the testing approach, strategies, resources, and timelines specific to Barclays Bank UK domain.
- Create detailed test cases covering various scenarios such as transaction processing, account management, security measures, and compliance requirements.
- Perform functional, regression, integration, and system testing to validate the software against specifications and ensure it meets Barclays Bank UK's standards.
- Develop and maintain automated test scripts using suitable tools/frameworks to increase efficiency and coverage, especially for repetitive test cases.
- Identify, report, and track defects using designated defect tracking tools, collaborating closely with developers and stakeholders to ensure timely resolution.
- Set up test environments that closely resemble Barclays Bank UK's production environment, ensuring realistic testing conditions.
- Conduct performance testing to assess system responsiveness, stability, and scalability under various load conditions, ensuring optimal performance for Barclays Bank UK's users.
- Perform security testing to identify vulnerabilities and ensure compliance with banking industry security standards and regulations.
- Maintain comprehensive documentation of test plans, test cases, test results, and any other relevant artifacts as per Barclays Bank UK's documentation standards.
- Develop and maintain automated test suites using Postman Collections and Newman CLI for API testing, allowing for continuous integration and regression testing in the software development lifecycle.
- Create and maintain comprehensive documentation for APIs tested using Postman, including endpoint descriptions, request and response schemas, authentication methods, and sample requests, to facilitate API consumption by developers. Conduct performance testing of APIs using Postman to assess response times, throughput, and scalability under various load conditions, ensuring optimal performance and reliability of APIs.

PROJECT # 1

PROJECT NAME : INNOVATE CREDIT UNION

DURATION : AUG 2020 - SEP 2021

DOMAIN : BANKING SECTOR

ROLE : SOTWARE TEST ENGINEER

DESCRIPTION :

"Innovate Credit Union" embodies a visionary initiative aimed at revolutionizing the traditional banking landscape by infusing innovation, inclusivity, and community-centric values into the credit union sector. This project is a pioneering endeavor that seeks to redefine the banking experience for members, empower communities, and drive positive social impact through accessible financial services and forward-thinking solutions.

RESPONSIBILITIES :

- Understand the project requirements, especially those specific to credit union operations, and analyze them to ensure clarity and testability.
- Develop comprehensive test plans outlining the testing approach, strategies, resources, and timelines tailored to the Innovate Credit Union domain.
- Create detailed test cases covering various scenarios such as member account management, loan processing, online banking features, and regulatory compliance requirements.
- Perform functional, regression, integration, and system testing to validate the software against specifications and ensure it meets Innovate Credit Union's standards.
- Develop and maintain automated test scripts using suitable tools/frameworks to increase efficiency and coverage, especially for repetitive test cases in the credit union domain.
- Identify, report, and track defects using designated defect tracking tools, collaborating closely with developers and stakeholders to ensure timely resolution.
- Set up test environments that closely resemble Innovate Credit Union's production environment, ensuring realistic testing conditions.
- Conduct performance testing to assess system responsiveness, stability, and scalability under various load conditions, ensuring optimal performance for Innovate Credit Union's members.
- Perform security testing to identify vulnerabilities and ensure compliance with banking industry security standards and regulations, with a focus on protecting member data and transactions.
- Maintain comprehensive documentation of test plans, test cases, test results, and any other relevant artifacts as per Innovate Credit Union's documentation standards.
- Collaborate with cross-functional teams including developers, business analysts, project managers, and quality assurance teams to ensure smooth project execution and delivery.
- Stay updated with industry best practices, emerging technologies, and trends specific to credit union operations to continually improve testing processes and methodologies.
- Perform testing of APIs using Postman tool, including functional testing, integration testing, and regression testing, to ensure that APIs meet functional requirements and provide accurate responses.
- Identify, report, and track issues found during API testing using Postman, and work closely with development teams to prioritize and resolve issues in a timely manner.
