PROJECTS

Amrita HIS

- o Developing & Designing Web based application with JAVA/J2EE, SOFIA Framework, open source object/relational mapping tool hibernate, JDO and implementing Database with MySQL.
- o Designing and developing new features, components and functionality to existing systems.
- o Contributed to the development of a barcode scanning framework, streamlining and automating manual processes across multiple modules of the Hospital Information System.
- o Developed a flexible client-side JavaScript framework (UI Delta Rules) for dynamically applying CSS styles to a wide array of interface controls based on predefined rules. This solution improved the overall user experience and design consistency across multiple application modules.
- o Performed UI bug fixes utilizing JavaScript, jQuery, HTML, and CSS to enhance the user interface and ensure a smoother user experience.

Swift

- o Played a pivotal role in the development of 'Swift,' a cross-platform hospital information application for Android and iOS, using Quasar, JavaScript, and jQuery.

Aura

- o Contributed to the development and implementation of Aura, a versatile and user-friendly business intelligence solution.
- o Facilitated secure healthcare data exchange among stakeholders, resulting in enhanced data management and overall operational efficiency.
