Education

B.E. (ECE) from VTU
B.E ECE 2014
Percentage - 61.7%

Diploma from DTE
Diploma ECE 2011
Percentage - 72.2

SSLC from Karnataka State Board
10th 2008
Percentage - 86.7%

Data enthusiast with a strong background in data science, machine learning, and analytics. Experienced in leveraging advanced data-driven strategies to optimize content scheduling, enhance customer experiences, and drive revenue growth. Certified in Python, SQL, Excel, and proficient in data analysis, hypothesis testing, and regression modeling.

Employment

Reflexion.ai(Formerly Sciffer Analytics)
Associate data scientist

Pune
Dec. 2020 to Current

Projects:

Predictive Customer Behavior Analysis | RefleXion.ai, Pune

- Employed **logistic regression** to analyze customer behavior and predict engagement patterns.
- Utilized historical data and user attributes to build a predictive model for user interactions.
- Provided actionable insights to enhance customer experiences and optimize content delivery.
- Technologies used: **Python, Pandas, Numpy Logistic regression, SQL, Powerbi**

Predictive Modeling of BARC Reach and TSV for Zee TV Across Time Periods| RefleXion.ai, Pune

- Prediction of BARC reach and TSV for Zee TV for various time-periods of the day.
- EDA** to understand features, see correlation and data wrangling to make data available for modelling in correct format
- Data pre-processing : Outlier treatment, profiling each variable to impute missing values, categorical values one-hot encoding.
- Hands on experience with packages like Pandas, **Numpy Matplotlib, Seaborn, Scikit learn, Plotly.**
- Regression Modelling using **Lasso regression, Random forest & Xgboost**; used **grid search** to derive best hyper-parameters
- Understand feature importance, model validation.
- Technologies used: **Python, Pandas, Numpy, SQL, Random forest, Clustering, Xgboost**

Sciffer Ad Optimizer | RefleXion.ai, Pune

- Developed an ad optimization engine to schedule ads in breaks based on customer defined constraints with ultimate goal of maximizing revenue.
- Used advanced video and audio analytics to analyze high and low points in content.
- Utilized data from BARC and other sources for data-driven scheduling decisions with linear programming optimization.
- Schedule adds with objective of revenue maximization while satisfying multiple business constraints like top-tail, separation, exclusivity, max spot per break, time/program exclusion, break preference etc.
- Technologies used: **Python, Pandas, Numpy, Linear programming, Pyscipt, SQL**

Music Scheduler | RefleXion.ai, Pune

- Developed a music scheduling system to minimize song repetition and enhance viewership using linear programming techniques.
- Utilized linear programming for optimal scheduling placement and duration.
- Schedule music with objective of minimizing the repetition of song in a given day with following constraints like no back to back, inclusion, exclusion, min/max.
- Technologies used: **Python, Pandas, Numpy, Linear programming, Pyscipt, SQL**

Source one management services

Data Analytics(Recruitment)

- Optimized data collection procedures and generated insightful HR dashboards.
- Tracked KPIs like Quality of Hire, Cost per Hire, and Fulfillment Rate.
- Utilized advanced Excel functions for reporting and analysis.
- Created charts and graphs for data visualization and performance assessment.

Bangalore
Aug. 2017 to Mar. 2018

Senior Executive Recruitment

- Managed end-to-end recruitment process, including candidate sourcing and interviewing.
- Interacted with clients to gather requirements and coordinated candidate interviews.
- Achieved an offer-to-joining ratio of 85% through effective candidate management.

Bangalore
June 2015 to July 2017

Practice Case Study:

- Zomato rating prediction using **random forest regressor**.
- Interview attendance predictor using random forest regressor.
- Predicting sales based on different advertising platforms using decision tree regressor.

Capstone Project: Customer Churn Analysis for Telecom

- Using telecom datasets predict churn of customer.
- Outlier treatment, profiling each variable to impute missing values where needed, eliminated columns with 80%+ missing values.
- Built logistic regression model using backward selection algorithm, **regularization L1/L2 Lasso/Ridge** and cross validate it.
- Predict churn probability for each customer.

Achievements

- Achieved up to 5% potential uplift in ad revenues through optimized ad scheduling.
- Successfully predicted content performance, contributing to box office success.

Certifications

Python 3 Programming Specialization

May 2022

Optimization with Python by Udemy

June 2021

Completed Business Statistics And Analysis certification by Rice University - Coursera

Full Stack Data Science Programme by Jigsaw Academy

Apr. 2020
