PROJECTS

Prudential- Netteza migration to Azure Synapses

PACS has started the Unified Data Cloud migration journey in March 2021. It went live with fully secured unified Data Platform in Microsoft Cloud on 27 March 2022. Parallely, all the existing use case from on-premise. Data Lake were migrated into unified Platform and on premises infrastructure was successfully decommissioned on 15 Aug 2022.

PruDataStore (PDS) is a local reporting data repository which is in IBM Netteza.

PDS take care of operational reporting needs for all divisions. IBM extended support for Netteza is going to expire in 2023 and all existing functionality should be migrated to PruDataHub (Unified data platform) on Azure Cloud by 2023 and IBM Netteza should be retired.

The Range Data-Warehouse

Client: Chris Dawson, UK

Role: DWH Test Engineer

Environment: Oracle and Informatica

DESCRIPTION:

The Range Which is one of the Organizations that sells various numbers of products. The

Range has various stores, which maintains Database has lots of historical data. This project was to

create Sales Data Warehouse and generate reports using Business Objects. The aim of sales data

warehouse is to analyze sales of major brands varying with different promotional schemes. The

system has a database which stores information about sales, profits and contacts of customers. Using

this existing database, the system should analyze the sales and profit and generates reports for sales

and profits in month wise and year wise. The resulting model gives us an idea about growth in profit,

prediction about increase in sales. The data warehouse was further used to do Market Based analysis.
