## Professional Summary

Logical and results-driven Web Developer dedicated to building and optimizing user-focused websites for customers with various business objectives.

## Designation

**Java full Stack Web Developer at Infosys**

## Skills

IDE : STS, Eclipse, Visual Studio

Languages : Java, Html, CSS, JavaScript

Backend : Spring Boot, Node.js

Frontend : Angular, Typescript

Database : MySQL, MongoDB, H2 Database

Tools : Postman, Git, IntelliJ, Maven

## Responsibilities

- Develop a responsive web pages using Html, CSS, and JavaScript as per client requirements.
- Creating RESTful API end points using Java Spring boot framework for a client project. This involves defining API endpoints, handling data validation, and ensuring data integrity.
- Have to participate in daily stand-up meetings, Sprint planning, task estimation, and tracking.
- Should Collaborating with front-end developers to ensure the seamless integration of UI components with back-end functionality.
- Troubleshoot and resolved bugs and issues in a timely manner.
- Testing and debugging to ensure the reliability and stability of the applications.

## Professional Experience - Technical

- Experience working in Agile Development following SCRUM process, Sprint daily Standup meetings
- Used Core java Collections, Exception Handling and java 8 features(like Lambda and streams)
- Used Maven to build the application and deploy it on Tomcat server
- Developed UI layer for the application using Html, CSS, Angular
- Used Micro services using Spring MVC, Spring boot, Dependency Injections
- Developed Controllers and Services for handling the requests using Spring Boot
- Used OAuth 2.0 authentication protocol respectively for security and authentication
- Designed Single Page Application using Angular Concepts of Components, Directives, Services, Templates and Binding.
- Used Junit for Unit testing and Log4j for logging errors

## Project work

- Working as a full stack developer in **Citizens bank**, USA (2022-present)
- Worked in Vehicle insurance System Project as Spring boot Developer.
- My work was to Create efficient and simple Rest API requests to fetch a User details
- Construct the Micro service architecture to implement the each controllers (coding and annotations)
- Used Junit for Unit testing and Log4j for logging errors
- Using Postman tool to check the API requests and handling the exception Messages
- Making calls by using Rest-end points and fetch the data as JSON response and parse it on UI.
- Using GitHub with well -defined branching and merging the code.

## |Certifications

- Completed “**Data structures & Backend with Java**” certification by **Coursera** (Board Infinity).
- Completed “**Ecommerce website with Html and CSS**” certification provided by **Great Learning Academy**.
- Done the internal certifications of java8, spring boot framework, Angular, micro services provided by Infosys.
