I have 7 years of experience as a dedicated Software Test Engineer, currently based in the Bangalore. My expertise spans testing diverse projects, including e-commerce platforms, digital marketplaces, and technology-infused solutions for outdoor sports. As a Software Test Engineer, I excel in analyzing requirements, designing comprehensive test scenarios, and executing meticulous test cases. Proficient in tools such as Jira and Bugzilla, I ensure bug-free software releases. Additionally, my skills extend beyond functional testing, encompassing hands-on experience in Selenium Automation, SQL queries, Postman, and Android app testing.

Willing to relocate: Anywhere

Work Experience

Knowde

Knowde is an ecommerce web-based project and the first digital marketplace for chemicals and polymers. Through Knowde, customers can compare all chemical-related products, request quotes, and make purchases

Project #2 - Smashers On

The Smashers ON App combines outdoor golf on Top tracer Ranges with technology, allowing you to connect with players and friends globally in a vibrant community. Engage in events on bucket-list courses and enjoy the game together.

Roles And Responsibilities

- # Tested and verified web applications using manual and automation skill sets in an agile environment.
- # Led rigorous manual testing efforts on a diverse range of devices, including Windows and Android platforms, to validate compatibility with leading web browsers like Chrome, Firefox and Edge, ensuring a flawless user experience and consistent performance across all platforms.
- # Participated in meetings, including stand-up meetings, sprint planning, and retrospectives.
- # Contributed to the identification of test scenarios and the design of test cases as per requirements.
- # Demonstrated proficiency in handling elements in Selenium WebDriver.
- # Utilized automation testing using Selenium with Java, BDD framework, Maven, TestNG, Git, and Jenkins.
- # Took responsibility for automating test cases and creating Jenkins jobs.
- # Developed automation scripts.
- # Carried out API testing using Postman.
- # Led a team of 5+ members to rewrite regression test cases and exceed goals.
- # Efficiently communicated with Business Analysts to identify bugs.

Project #1 - Palms

Palms, WMS software designed to facilitate the efficient movement of stocks within the warehouse. Built on the Microsoft .NET platform, PALMS provides a web application accessible from all browsers. In addition to the web application, Palms also offers Windows and Android-based HHT applications.

Roles And Responsibilities

- # Prevented project delivery delays by utilizing Jira for efficient project tracking
- # Conducted functional, regression, and system testing to ensure product quality
- # Reported defects, and defined severity and priority levels
- # Coordinated with developers during releases to ensure comprehensive testing of all code changes.
- # Mentored junior testers, offering guidance and support on testing activities.
- # Captured bugs and logged for review in the Microsoft Team Foundation Server.
- # Implemented regression testing and communicated observations to the development team.

.

Project #1 - Finsoft

Finsoft, Financial web application software where user can join to different deposit schemes based on different interest rates.

Roles And Responsibilities

- # Analyzed and reviewed all requirements and functional specifications of the application.
- # Identified the necessary testing environment, tools, and resources
- # Created automated test scripts where applicable
- # Documented test results, reported issues, and logged defects.
- # Assisted in troubleshooting customer-reported issues.

Education

Master of Computer in Application

Hindustan College of Engineering & Technology - Coimbatore, TAMIL NADU, IN
2011 to 2014

Skills / IT Skills

- Programming Languages: Core Java
- Domain Knowledge: Financial, E-commerce, Event management software.
- Operating Systems: Windows
- Automation Tools :Selenium Webdriver, Selenium IDE, AutoIT ,Postman
