

Career Objective:

IT professional with 3.8 years of experience in **DevOps**, **AWS** and **Linux**. Experience in **Continuous Integration** and **Continuous Delivery** methodologies. Ability to quickly understand requirements & involved in client meetings.

Experience Summary:

- Experience in using **Git**, **Maven**, **Jenkins**, **Docker**, **Ansible** and **AWS** services which reduce the effort of developers and operation teams in performing maintenance and daily operation.
- Strong background in Branching, Merging, Tagging, and maintaining the version across the environments using **SCM** tools like **GIT (GitHub)**.
- Building the source code using the Build Tool, **Maven** by writing **pom.xml**.
- Experience in **Nexus** Repository in storage and for downloading artifacts for deploying it to applications and for testing.
- Designing, implementing, and supporting fully automated **Continuous Integration (CI)** and **Continuous Deployment (CD)** processes using **Jenkins**.
- Good experience in creating and configuring new Build jobs, Plug-ins management, Distributed builds using **Master/Slaves** and other administration tasks in **Jenkins**.
- Good experience in deploying the files in **Tomcat** Server.
- Having experience in **Docker**, **Containerizing** applications using **Docker**, and managing the Docker private registry.
- Having Experience writing **Docker files** to build the **Docker images**. Experience with container-based deployments using **Docker**.
- Worked with various components of **Docker** like **Docker Engine**, **Docker hub**, **Docker Registry**.
- Providing Infrastructure support with **Ansible**. Writing **playbooks** to automate infrastructure using ansible.
- Experience on automating build and deploy Java applications to different environments like Dev, QA, and UAT by using Jenkins.
- Having experience in Deploying the **WAR** files on application servers.
- Experience on **Kubernetes master node** and worker node.
- Worked on Kubernetes creating **pods**, **replica sets** and deployment objects.
- Hands on experience with **Linux** Environments.
- Experience on creating and maintaining the infrastructure on **AWS services** such as-
 - **Ec2 Instance**, **Simple Storage Services(S3)**,
 - **Elastic Load Balancer (ELB)**, **Virtual Private Cloud (VPC)**,
 - **Elastic Block Storage (EBS)**, **Auto Scaling**, **Cloud Watch**.

- Worked on Multiple **AWS** instances, set the **security groups, Elastic Load Balancer** and **AMIs, Auto scaling** to design cost effective, fault tolerant and highly available systems.
- **Used Identity and Access Management (IAM)** to **assign roles** and to create and manage **AWS users, groups and use permissions to AWS resources**. And also Used **Simple Notification Service (SNS)** as email alert system by creating topics and subscribing users email to topics.
- Have excellent problem solving, time management skills, ability to work independently or as part of a team.

Educational Qualification:

- **B. Tech** from **Jawaharlal Nehru technological university, Anantapur 2017.**

Professional Experience:

- Currently working as **AWS DevOps Engineer** for **Safe Storage Technologies & Services Bangalore** from **Nov 2019** to **Aug 2023**

Technical Skills:

Cloud Platform	Amazon Web Services
Version Control System	Git
Build tools	Maven
Continuous integration tool	Jenkins
Configuration Management	Ansible
Containerization platform	Docker
Operating system	Windows, Linux
Container Orchestration tool	Kubernetes
Application server	Tomcat
Ticketing tool	Servicenow

Project #2:

Title : Ecommerce & Safe Storage
Duration : Aug '21 to till date
Role : AWS & DevOps Engineer

Description:

E-commerce is the activity of electronically buying or selling of products on online services or over the Internet. E-commerce draws on technologies such as mobile commerce, electronic funds transfer, supply chain management, Internet marketing, online transaction processing, electronic data interchange, inventory management systems, and automated data collection systems.

Roles and Responsibilities:

- Creating branches and tags using Git, Maintain the Git Repository.
- Creating Jar / War Files Using Maven, Experienced with pom.xml files along with java web.
- Automate the build process using Jenkins jobs.
- Monitoring daily builds using CI tool Jenkins, Verifying logs.
- Collaborated with Development and Support teams to setup a **CD (Continuous Delivery)** environment with the use of **Docker continuous** build and delivery tools.
- Creating CI/CD pipelines by integrating **Git, Git Hub, Maven, Jenkins and AWS (amazon web services)**
- Setting up new build configurations for various process in Windows and Linux environments.
- Responsible for Build and Release Management, Deployment Management, EnvironmentManagement, Incident Management and main contact POC for Build and Release
- Implement CI/CD process for multiple projects using Jenkins.
- Create Jenkins pipeline jobs for Java Applications to Implement CI/CD process.
- Working on Multiple **AWS instances**, set the security groups, Elastic Load Balancer, Configuring and Networking of **Virtual Private Cloud (VPC)**.
- Worked with AWS **S3**, configuring them with permissions, Logging, versioning and tagging.
- Configured **IAM** roles for Ec2 instances that provide specific level access to S3 Buckets and other services.
- Implemented alarms in **Cloud Watch** based on thresholds and monitored the server's performance, CPU Utilization, disk usage.

Project #1:

Title : Warehousing
Duration : Jan '20 to Aug '21
Role : DevOps Engineer

Description:

Prehistory and ancient history A warehouse can be defined functionally as a building in which to store bulk produce or goods (wares) for commercial purposes. The built form of warehouse structures throughout time depends on many contexts: materials, technologies, sites, and cultures.

Roles and Responsibilities:

- Administration access **to Git & Git Repository**.
- Creating **Jar/war** Files using Maven.
- Experienced with **pom.xml** files along with java web applications.
- Automate the build process using **Jenkins jobs**, monitoring daily builds using Jenkins jobs.
- Verifying **the logs** if the build fails.
- Deploying the jar/war files in **Tomcat web server**, Verify the Deployment logs to check for successful deployments.
- Configuring Jenkins as a common **CI** engine to build and promote applications to **DEV, QA and STAGING** to **Linux environments** and also worked on installing the required plugins in Jenkins.
- Created **Jenkins pipelines jobs** by using Jenkins file and also enabling build triggers to automate Jenkins jobs.
- Set up **Jenkins master and Slaves** configuration to support scalability and agility.
- Configured Email notifications in Jenkins.
- Experience in **Docker to build Docker images** and pushing an image to a private registry and also experience in writing the Docker file to build Docker images and **creating Docker Containers**.

Personal details:

Name : Desaisetty Arun Kumar

DOB : 30-Oct-1995

Mob : 7893394859

Address : D.No 13, Ramaiah garden, Royal school road, Kadugudi, Bangalore-560067
