

CALVIN BANET

Software Engineer

@ calvinbanet@gmail.com

📍 Bangalore

Mob :- 8310101816

SUMMARY

QA Automation Engineer skilled in implementing QA processes and procedures, developing and setting automation frameworks, and writing test scripts while working with development, customers, support, and implementation teams.

EXPERIENCE

QA Automation Engineer

Fission Labs

📅 02/2021 - Present 📍 Hyderabad, India

Implemented and documented automated testing framework resulting in and reducing in testing time.

- Developed and implemented an **automated testing framework** using **Selenium WebDriver in Java**, ensuring efficient and reliable testing of **web applications**.
- Designed and executed test cases for different web applications, covering **functional, regression, and integration testing**, ensuring the quality of the software.
- Integrated **Selenium automation scripts** with **continuous integration tools** like **Jenkins**, enabling scheduled and automated test execution as part of the CI/CD pipeline.
- Identified and reported defects using issue tracking tools like **JIRA**, providing detailed information and assisting in the resolution process.
- Experience in designed Functional decomposition **TestNG**, **Data Driven** & **cucumber BDD** framework.
- Proficient experience in Test Case Design, Test Execution, Bug tracking, debugging, troubleshooting and Reporting.
- Utilized **TestNG** for test case management, enabling parallel test execution, test prioritization, and **data-driven testing**.
- Implemented **cross-browser testing** using **Selenium Grid** to ensure compatibility across different browsers and platforms.
- Implemented **behavior-driven development (BDD)** using **Cucumber** and Gherkin syntax to automation framework
- Implemented advanced reporting mechanisms using frameworks like **Extent Reports** or **Report NG** to generate comprehensive test execution reports.
- Implemented integration testing using **API testing frameworks** like **SOAPUI** to validate **end-to-end system functionality**.
- Implemented advanced techniques like **headless browser testing** and **browser profiling** for **performance testing** and optimization.

TECHNICAL SKILLS

Automation testing Java Python

Test Scripting SDLC API

Web application testing

Manual testing SQL

STRENGTHS

Process Optimization

Reduced test execution time by 70% through automated test scripts

Collaboration

Improved communication between teams resulting in 20% faster issue resolution

Attention to Detail

Identified and resolved critical defects, preventing major customer impact

ACHIEVEMENTS

Successful Automation Project

Automation project resulting in 70% reduction in manual testing effort

Cross-Functional Collaboration

Improved collaboration between development and QA teams, resulting in fewer defects in production

LANGUAGES

EXPERIENCE

QA Manual Engineer

Fission Labs

📅 2021 - Present 📍 Hyderabad, India

Manual testing involves executing test cases, validating software functionality, and reporting defects without using automated tools or scripts.

- Execute **test cases** and meticulously validate software functionality.
- Understood the requirements & project functionality and conducted system/functional testing, functionality testing
- Performed Functional, Performance, Smoke, Regression, Exploratory, Sanity, Compatibility, Usability and Unscripted testing.
- Identified, classified, reviewed, resolved P1/P2/P3 defects in consultation with Tech support team and other team members.

PROJECTS

1. Robert Half

📅 03/2021 - 04/2022 📍 Hyderabad

This project is based on salesforce and Robert half is mainly uses for job seekers who are looking for employment in one of the industries they specialize in and we used licensed tool called Provar for automation testing scripts

- Implemented Provar tool for automation testing, enhancing test efficiency and scalability.
- Developed **robust test automation** frameworks using Provar, reducing manual effort and improving test coverage.
- Integrated Provar with **Salesforce CRM**, ensuring end-to-end testing of complex business processes.

2. Path Presenter

📅 04/2022 - Present 📍 Hyderabad

The Path Presenter Project focuses on expanding and improving services in healthcare. path presenter refers to the remote delivery of healthcare services using telecommunications technology, allowing patients to consult with healthcare providers without physically visiting a clinic or hospital. The project provides training and education to healthcare providers, staff

- Experience in designing and implementing test scripts using WebDriver IO to perform functional and regression testing of web applications.
- Proficient in creating complex test scripts using WebDriver IO to automate end-to-end testing scenarios, including user interactions, form submissions, and data validations
- Knowledge of Behavior-driven development (BDD) practices and frameworks like Cucumber, and defining test scenarios
