

Guru Keerthana Macha

Java Developer

Mobile No: +91-6303867925

Email: mgurukeerthana@gmail.com

Hyderabad

Summary:

Having around 2+ years of professional experience in IT and in Java, Spring Boot, Hibernate, JPA, SQL, J2EE based systems. Primarily in the areas of Application Development, Maintenance & Support, and Systems Analysis and Manual Deployments.

- Extensive experience in development of J2EE applications using **Java**,
- **Spring Boot, Rest Api, Hibernate, JPA, SQL.**
- Experience in Rest full Web service
- Experience in developing Business service components in Spring Framework.
- Good Exposure in developing Restful Services, Spring Boot.
- Experience in using IntelliJ IDE and remote debugging.
- Experience on development of enterprise applications on Tomcat Webserver.
- Strong experience in troubleshooting and fixing of issues Java/J2ee application.
- Self-motivated, quick learner and willing to adapt new technologies.

Professional Experience:

Working as Associate in **Lead Winner Corps.,** Hyderabad from **Feb 7th 2022** to **till**

Academic History:

Completed B.Tech(Electrical And Electronics Engineering) in 2021 from Audisankara College Of Engineering and Technology-Gudur

Skills Summary:

Programming	: JAVA, SQL.
J2EE Technologies	: Spring ,Spring Boot.
IDE	: IntelliJ
Application/Web Servers	: Tomcat 7.0
Framework	: Spring Boot,Hibernate,JPA.
Operating Systems	: Windows.
Databases	: PostgreSQL.
Version Control	: Git

Project #1: SQUAREUP**Environment:**

Language: Java
Frameworks: Spring MVC, Spring Boot
Technologies: Rest API, SQL, Hibernate
Role: Team Member

Duration: February 5th, 2022, to April 31st, 2023 (Note: April has 30 days, so the date is adjusted to April 30th)

Project Overview:

"Square up" is a comprehensive solution designed to optimize fund tracking processes for government departments and their respective authorities. Integrated seamlessly with two external systems, namely PFMS (Public Financial Monitoring System) and multiple banks for streamlined payment operations, Square up ensures efficiency and accuracy in financial transactions. Notably, the solution offers two distinct payment modes, ACH and SNORKEL, enhancing flexibility and adaptability to diverse payment requirements.

As a developer, my key responsibilities in this application included:

- Developing and integrating Square up with external systems such as PFMS and various banks for seamless data exchange and payment processing.
- Ensuring the security and integrity of the application by implementing best practices and standards.
- Providing ongoing support and maintenance to address any issues and implement enhancements as needed.
- Documenting software designs, processes, and procedures for future reference and knowledge sharing.

- Participated in code reviews and collaborated with fellow developers to identify opportunities for improvement and enhance the overall quality and efficiency of the Square up solution.
- Documented software designs, integration workflows, and technical processes for reference and future maintenance, promoting knowledge sharing and collaboration within the development team.

Project # :2

Position: Team Member

Project: Distribution of Funds System

Environment:

Language: Java

Framework: Spring Boot

Database: SQL, Hibernate

Duration: May 1, 2023, to January 27, 2024

Responsibilities and Achievements:

Project Overview:

The SFMS solution serves as a robust platform for implementing state-level schemes, effectively bridging operations between state and district levels. State officials distribute funds through this platform, which are then utilized by district officials to make payments to vendors and beneficiaries. Notably, SFMS seamlessly integrates with two various banks for streamlined API integration, ensuring smooth financial transactions across the system.

As a developer, my key responsibilities in this application included:

- Developing and implementing API integrations to connect software systems and facilitate data exchange.
- Writing custom code and scripts to support integration workflows, data transformations, and business logic.
- Designing and configuring API endpoints to enable seamless communication between systems.
- Troubleshooting, documenting software designs, processes, and procedures for future reference and minimizing downtime and disruptions to business operations.
- Implementing error handling and logging mechanisms to track and troubleshoot payment processing issues.
- Optimizing payment workflows and user experiences to enhance efficiency and usability.

Project # :3

Position: Team Member

Project: Reach

Environment:

Language: Java

Framework: Spring Boot

Database: SQL, JPA

Duration: Feb4, to till

Overview:

REACH, an innovative healthcare solution designed to revolutionize patient primary healthcare.

Goals:

1. Medical registration of User, Patient, Doctors and Command line centre
2. Provide end to end medical history of Prognosis and diagnosis of every Patient which User is registering and getting medicated from doctors login.

Specifications:

REACH will pre-scan with the Vitals and analyse the reports on medical history and send the preliminary dialogue to the doctor.
