

HARSHITHA M G

Summary

Results driven and dynamic professional having 2.5+ years of excellence in analyzing business and system requirements and developing various test specifications & strategies which includes Functional, System Integration, Regression & Performance Testing. Highly capable enough to establish the Software Quality and Configuration Management Plan (SQCMP) and tailor processes to meet the objectives and constraint of the project. Proven experience in designing, developing, and executing automation scripts using open source tools like Selenium. Excellent in managing evolving test requirements throughout the product lifecycle, covering test analysis, planning, design, test data preparation and test execution. Adept at planning and scheduling the software QA evaluation and software configuration audits throughout the IT project life-cycle.

CAREER TIMELINE:

- May 2021 – Present: Enkefalos, Mysore as Quality Assurance Engineer

Key Result Areas

- Reviewing business requirements, system documentation and project assets to create robust, accurate, usable test artifacts (test plans, test cases, automated scripts, reports) to ensure end results align with business needs
- Analyzing requirements and effectively applying appropriate testing techniques to ensure comprehensive testing coverage in a timely manner
- Creating strategies to identify, replicate, and test defects across multiple applications and code bases and validating changes to target applications
- Performing extensive functionality, integration, regression, interoperability and end-to-end system testing
- Documenting and interpreting results of automated testing, recording bugs and documenting future remediation work
- Actively contributing to quality process improvement, testing and software quality development strategy and roadmap/vision
- Responsible for generating test plans based on architecture, use cases and requirements; working in co-ordination with product, project and QA teams
- Analyzing specifications and developing test plan to provide adequate test coverage for all the features
- Adapting to the QA technologies in the company and applying the tools in the whole QA process
- Participating in all phases of the development life cycle related to QA
- Carrying out desk checks and evaluating performed processes and work products against applicable application development/maintenance processes and quality management principles

Core Skills

- Software QA
- Test Case Development
- Agile Methodologies
- Automation Testing
- Defect Lifecycle Management
- Documentation
- Product Lifecycle
- API Testing
- SDLC
- STLC

Technical Proficiency

- Tools: Postman, Insomnia, Selenium, Cucumber, Jmeter
- Test Management Tools: JIRA
- Databases: PostgreSQL
- Language: Python
- Operating Systems: Windows 7 & 10, MacOS and Androids

Education

- BE. Electronics & Communication | Vidya Vikas Institute of Engineering and Technology Mysore|

Project Annexure

EventZalley – Events Participate Platform (www.eventzalley.com)	
In a nutshell	• Eventzalley is platform user buy the tickets and events for the following event category. • Events category Running, Cycling and Swimming. • Users buy the tickets and participate specific events. • Result will proceed portal itself. • Users participate virtual event connect with strava.
Roles	• Successfully delivered customer, business, tech & compliance related complex projects (like platform registration, bib creation, and payment process) on/before time with almost no issues on production • Review functional requirements as well as design documents • Write requirement document by understanding the module. • Prepare comprehensive test plans. • Write smoke, regression and system test cases. • Maintain, execute and update the test suite as per the changes in the module/application. • Write and execute MySQL queries to verify data. • Write detailed test cases for features, APIs • Co-ordinate task and testing progress between developer and QA team. • Partake in stakeholder's meetings and gather valuable information that can be translated into test or product requirements. • Partake in support calls to understand end user problems and registration and payment needs. • Discussion with stakeholders (PM, SDM, Dev) and my team. • Complete ownership right from starting of the project. • Conduct end to end testing without compromising on testing standards. • Automation using BDD cucumber tool.

Keyskillset – Learning Plat Form(www.keyskillset.com)	
In a nutshell	• Users could buy any courses to learn (Like excel and python course)
Roles	• Review functional requirements as well as design documents • Write requirement document by understanding the module. • Prepare comprehensive test plans. • Write smoke, regression and system test cases. • Maintain, execute and update the test suite as per the changes in the module/application. • Write and execute MySQL queries to verify data. • Write detailed test cases for features, APIs • Co-ordinate task and testing progress between developer and QA team. • Partake in stakeholder's meetings and gather valuable information that can be translated into test or product requirements. • Partake in support calls to understand end user problems and registration and payment needs. • Discussion with stakeholders (PM, SDM, Dev) and my team. • Complete ownership right from starting of the project. • Conduct end to end testing without compromising on testing standards. • Automation using BDD cucumber tool.
