Experienced Java Developer with 3.3 years of experience in Java applications, specializing in Spring Boot, AWS, Microservices, Hibernate, SQL, and RESTful API development. Proven track record in optimizing code, fixing defects, and collaborating with cross-functional teams to deliver high-quality software solutions.

Experience: -

Coforge Solutions; - 2.2 years

Reliance Retails:- 6 months

Coforge Solutions:- 1.1 years

Total Experience 3.3 years

Designation:- Java Backend Developer

SKILLS

- Java 8 Feature
- Spring Boot, Hibernate Spring MVC
- RESTful API , RESTapi
- MYSQL: DB
- JUnit Postma
- Micro Service

Area of Expertise

Java (JDK 1.8): Proficient in Java development, with a focus on Java SE 8 features and functionality.

Hibernate JPA: Experienced in using Hibernate for Java Persistence API, enabling efficient database interaction.

Spring Boot: Skilled in developing applications using the Spring Boot framework, known for its auto-configuration and ease of use.

Microservices: Proficient in building microservices architecture for scalable and modular applications.

Restful Web Services: Experienced in designing and implementing RESTful APIs for seamless communication between systems.

MongoDB: Familiar with MongoDB, a NoSQL database for efficient data storage and retrieval.

PostgreSQL: Competent in working with PostgreSQL, a powerful open-source relational database system.

Servlets, JSP, JSTL: Proficient in Java EE technologies like Servlets, JSP, and JSTL for web application development.

Eclipse, STS: Skilled in using Eclipse and Spring Tool Suite (STS) as integrated development environments.

Angular (TypeScript): Proficient in TypeScript and Angular for dynamic and robust web application development.

Git: Proficient in version control and collaborative development using Git.

Maven: Experienced in managing project builds and dependencies with Apache Maven.

JWT Token: Knowledgeable in implementing JWT token authentication and authorization for API security.

JDBC, ORM Concepts: Proficient in Java Database Connectivity (JDBC) and Object-Relational Mapping (ORM) concepts.

JUnit Testing: Skilled in unit testing with JUnit for ensuring code reliability.

Model Mapper (DTO Implementation): Experienced in designing and implementing DTO classes for data transfer between application layers.

Spring MVC: Competent in the Model-View-Controller architecture for scalable and maintainable applications.

Spring Security: Knowledgeable in implementing authentication and authorization features securely.

RESTful API Design: Skilled in designing RESTful APIs for efficient data transfer and integration.

SQL (Structured Query Language): Proficient in writing SQL queries, creating, and modifying database schemas.

Debugging: Skilled in identifying and resolving issues in software applications.

JSON (JavaScript Object Notation): Proficient in parsing, generating, and manipulating JSON data for efficient data exchange.

Java 8 Future API: Experienced in leveraging Java 8 Future API for concurrent and asynchronous programming.

HTML, CSS: Proficient in front-end technologies for web development.

AWS: Knowledgeable in Amazon Web Services (AWS) for cloud-based solutions.

Project Breakdown:

Project Name: SimplyBook.me

Team Size: 7

Location: Bangalore, Karnataka

Technologies Used : Core Java, J2EE, Spring Boot, Hibernate JPA, IntelliJ

Ide, Postman, Java, Hibernate, Restful API's, MySQL, Spring Security,

JUnit, Git & GitHub, , Swagger.

Project Description:

The SimplyBook.me is a web-based application. It offers a userfriendly interface for patients to book online doctor medical appointment in your city. Project Name: WEGO Flight Booking Application

Project Name: WEGO Flight Booking Application

Role: Java Backend Developer

Team Size : 8

Project Description: The WEGO is a web-based application. It offers a user-friendly interface for users to book online flight reservation.

Technologies Used: Java, Spring MVC,

Roles and Responsibilities:

- Applying the **Spring MVC** architecture to develop the application.
- Setting up and configuring **MySQL** Database and creating the database schema.
- Implementing **entity** classes with **encapsulation** concepts.
- Creating **repository layers** for database operations.
- Configuring **application properties files**.
- Creating the **service layer** in the application for the implementation of backend business logic.
- Developing **controller classes** to handle user interactions.
- Implementing **CRUD** operations in repositories using Spring Boot.
- Conducting unit testing using **JUnit**.
- Exposing and testing **RESTful** Web Services using **Postman** and handling **HTTP status codes**.
- Securing the application and **APIs** with **Spring Security** with **signing** and **signup** feature, Spring Validation and Spring **JWT Token**.
- Managing project dependencies using **Maven**.
- Handling **exceptions** in the project.
- Implementing **pagination** and sorting for reading data from the database.
- Understanding and implementing **E-R** diagrams in the code.
- Implementing various database relationships like **One-to-One**, **One-to-Many**, **Many-to-Many** mapping.
- Fixing bugs reported by testers and performing **debugging**.
- Conducting product demos for **customers**.
- Integrating **Email API** in the application.
- Collaborating with the team and **Participating** in daily stand-up meetings to provide project updates.
- Developed and Maintained **Healthcare** applications using a stack of technologies.
- Implemented Lombok annotations to reduce boilerplate code in entity classes.
- Developed server-side logic, **APIs**, and **database** interactions.
- Created **Entity classes**, **Controller** classes, and **DTO** classes.
- Utilized **Hibernate JPA** for data persistence.
