PROFILE SUMMARY

Experienced System Integration Engineer in the WWAN domain and experience in Build and Release Management, Jenkins, scripting CI/CD, Linux commands, GIT, Gerrit, and JIRA.

EMPLOYMENT DETAILS

Nov 2021- October 2023 **DevOps & System Integration Engineer**
L&T Technology Services Limited (**Intel Technology India Pvt. Ltd.**)

- Monitoring the Mainline(ML) and resolving builds if any builds are broken.
- Planning and Managing Customer Build, Deployment of customer package, and Release of Bi-Weekly Customer Build to Fibocom
- Upload the Customer build to the artifact, Release note preparation, and notify the release details to Verification teams.
- Monitoring Jenkin's Automated builds and fixing the builds if it is failed.
- Performed daily builds will announce in Share point for verification.
- Perform Sanity for each customer release on the Modem and prepare the report.
- Debug the build failure and Rebuild.
- Performed sanity for Daily Builds.
- Planning and managing of Officially Build, Deployment and Release of Weekly Customer Builds and Patch Builds.
- Working on the Engineer Builds requested by the Developer.
- Working on branching, committing, and syncing the Work area.
- End to End ownership for Pre-Integration for CRs.
- Planning to Release the build with defining content and code freeze date.
- Worked in JIRA/UTP tool for tracing the issue
- Performing Automated HARTS sanity for Customer packages.
- Testing on Intel Platform with Fibocom chipset.
- Giving training to the new joiners about the Project works.

OTHER WORKS:

- Learning projects related training and works from lab team to deliver the product with quality and easy to identify the issue and root cause.
- Knowledge of basic AT commands.
- Integration of hardware and software to check testcase and delivering it to customers.
- Providing suggestions to team members to make better work environment.
- Base Board Connection with the platform and making the platform Bootable by flashing IFWI, BMC, CPLD chips, and VR.

TECHNICAL SKILLS

- Jenkins, Scripting
- CI/CD, GIT
- Gerrit, Linux
- JIRA, UTP
- Jfrog – Artifactory, Docker basics
- Build and Release Management
- DevOps

COURSES & TRAININGS

- Successfully completed ‘CISCO Networking Academy CybersecurityEssentials’ course conducted by CISCO.
- Arduino Botics, a two-day National Workshop organized by the Indian Institute of Science in collaboration with EI Systems.
- MAT LAB with Arduino, a two-day National Workshop Organized by the Dept of Electrical & Electronics Engineering in collaboration with Entho Technology Solutions India Pvt. Ltd.
- Implant Training in the Area of “Electrical Maintenance” at Salem Steel Plant.
- Completed my Implant Training at Electric Loco Shed Erode.

MINI PROJECT

Project Name:- Condition Monitoring of Doubly Fed Induction Generator Using SCADA Data Analysis

- Monitor the wind Turbine using a SCADA system to reduce the maintenance cost. This system is designed for online monitoring of the operation of the wind turbine.
- This helps to reduce the chances of failures in wind turbines and increase their lifespan.
- The Monitoring system is built with a PIC microcontroller for the processing unit. Sensor information is processed and transferred to the PC to collect information cloud storage process and it can be analyzed remotely.
- It is uploaded to the cloud using Internet data. Remotely we can able to detect upcoming problems or failures.

EDUCATION

Bachelor’s in Engineering (BE) - Electrical and Electronics Engineering from Sona College of Technology 2017 - 2021 in Tamil Nadu.
