

Summary

Highly skilled and detail-oriented software developer with 5 years of experience designing, developing, and deploying enterprise-level applications. Proficient in multiple programming languages, software development methodologies, and database management systems. Strong problem-solving skills and ability to work effectively in a team-based environment.

Skills

- Java, Python
- Spring Framework, Boot
- Spring Cloud, RabbitMQ
- Docker, Kubernetes
- Spring JPA, Security
- MySQL
- Microservice Architectures
- Git, SVN
- HTML5 & CSS

Work Experience

LTIMindtree

Software Developer • 2022 - Present

- **Key Contributions :**

- Customized Artemis ActiveMQ Plugin: Developed a customized Artemis ActiveMQ plugin to facilitate efficient monitoring and scheduling tasks, thereby enhancing task execution and monitoring capabilities.
- Hyperic Functionality: Leveraged Hyperic's multifaceted functionalities, including ADR (Auto-Diagnostic-Remediation flow), DCFC (Daily Control Functional Check), and Alert Management, to bolster Mwatch's monitoring and management capabilities.
- Notification Enhancement: Resolved an issue related to software notifications, ensuring prompt and reliable notifications for end-users.
- Security Module: Played a pivotal role in enhancing the project's security module, addressing vulnerabilities, and strengthening data protection.
- Developed a DHCP monitoring system utilizing event IDs to detect IPv6 and IPv4 address exhaustion, triggering automated alerts. Integrated seamless ticket creation for efficient incident resolution, and designed a scalable architecture to handle growing network demands.

Education

Bachelor of Technology in Computer Science

Lovely Professional University • 2017-2021

Academic Project :

- **e-Farming Store Application:**

- The e-Farming Store Application is a robust platform developed using Spring Boot with role-based authentication, RESTful APIs, and a MySQL database. This secure system enables users to engage in farming activities while controlling access based on user roles. The application provides RESTful APIs for managing farming-related data, allowing users to perform CRUD (Create, Read, Update, Delete) operations on essential resources.
- **Key Contributions:**
 - Authentication and Authorization:
 - Implemented user authentication to ensure that only authorized individuals can access specific parts of the application.
 - Defined various roles and permissions for different user types, enhancing security and user management.
 - Employed a built-in authentication mechanism, storing user data securely in MySQL.
 - CSRF Protection:
 - Implemented in-built Cross-Site Request Forgery (CSRF) protection to safeguard against malicious actions initiated by forged requests, bolstering the application's security.
 - CRUD API Development:
 - Designed and developed comprehensive CRUD APIs for the user interface and product management, facilitating efficient data manipulation and management.

- **Microservice Architecture in Banking Application:**

- Designed and developed a robust microservices-based banking application using Spring Boot, Version control, incorporating advanced features for enhanced security and scalability.
- **Key Contributions:**
 - Authentication and Authorization:
 - Implemented robust user authentication with role-based access control and distinct permissions. Secured user data in MySQL and employed built-in CSRF protection for enhanced application security.
 - Containerization:
 - Docker to containerize the application, streamlining deployment across various environments.
 - Utilized Docker Hub to restore or store repository from local
 - Docker Compose to manage multi-container development environments for QA, developer, and production stages
 - RESTful API Development:
 - Designed and developed RESTful APIs seamlessly, ensuring data consistency and reliability.
 - Error Handling:
 - Implemented robust error handling mechanisms to provide meaningful error messages and streamline troubleshooting.
 - Configuration Management:
 - Leveraged Spring Cloud for centralized configuration management.
 - Established a configuration server and implemented server registry and discovery for seamless communication between microservices.
 - Implemented RabbitMQ for efficient message queuing between microservices and also enabled monitoring and optimal performance and responsiveness
 - Container Orchestration:
 - Implemented Kubernetes for container orchestration, enhancing scalability and reliability.
 - Utilized Helm for efficient management of Kubernetes applications.
 - Implemented Ingress concepts to manage external access to services within the Kubernetes cluster.

Intermediate

Narayana Junior College • 2015 -2017

Certifications

Spring Boot 3, Spring 6 & Spring Hibernate for Beginners

Udemy Course • 2021 -2021

Master Microservice with SpringBoot,Docker, Kubernetes

Udemy Course • 2023 -2023

Spring Security 6 along with AUTH02, JWT

Udemy Course • 2023 -2023

Python, jupyter and Django for beginner

Udemy Course • 2023 -2023

Organization

Pahal-An initiation:

- Pahal an Initiation is a TIER 6 Organization, which is working under the aegis of Division of Student Welfare, Lovely Professional University
