

Jyothi Jilalla

Mobile Number:8121077460

Mail ID : reachjyothi1127@gmail.com

CareerObjective:

Seeking a challenging role to work in a professional environment that provides opportunity to learn key technologies, be an effective team player in developing, managing projects and to be an asset for the organization by delivering to the best of my capabilities

Summary:

Having over 3.6 years of experience in Cloud(AWS) and DevOps tools.

- Build/Release and DevOps methodologies and setting up and maintaining CI&CD pipelines and delivering releases for multiple Applications running on Linux based distributed Infrastructure.
- Experience in configuring AWS resources with IAC with **Terraform**.
- Expertise in supporting multiple projects during builds and release process.
- Hands on experience with version control tool **GIT** and **GITHUB**.
- Good working experience on **Linux Operating Systems.[RHEL]**
- Hands on Experience with Build Tool **Maven** to generate project Artifacts.
- Involved in installing **Jenkins** on a Linux Machine. And creating a Master and Slave configuration to implement multiple parallel builds through a build.
- Hands on Experience in automating build process using **JENKINS** and **GitHub-Actions** CI Tool.
- Good experience in deploying the files in **Tomcat** Server.
- Integration, deployment and administration of Java Application servers - Tomcat Application Server across Linux platforms.
- Experience in integrating Code Quality Analysis Tools like **SonarQube**.
- Experience in using Nexus, Artifact Repository Managers for Maven builds.
- Experience in writing Ansible playbooks and creating **Ansible** Roles for configuration management.
- Virtualized the servers AWS using the **Docker**, created the Docker Files, build the Docker Images, Docker Compose, run the Docker Containers for using different environment.
- I have good knowledge on **Kubernetes** in writing manifest files for Deployment, Service, Pod, Daemon Sets, Roles (RBAC), Persistent Volume (PV), Persistent Volume Claim (PVC), Storage, Namespaces.
- Monitored and maintained Kubernetes clusters using **Prometheus** and **Grafana**, setting up custom alerts for early issue detection and resolution.
- Managed **AWS EKS** clusters to orchestrate containerized applications.
- Designed and maintained infrastructure as code for **ArgoCD Kubernetes** clusters.
- Automated cloud resource provisioning and scaling with **Terraform**, reducing manual effort and improving agility.
- Expertise in Amazon AWS Cloud Administration which includes services like: **EC2, S3, EBS, VPC, ELB, AMI, SNS, RDS, IAM, Route 53, Auto scaling, Cloud Watch, AWS-EKS, Cloud Trail, Security Groups** etc...,
- Launching Amazon EC2 Cloud Instances using Amazon Web Services (Linux/Ubuntu/RHEL) and configuring launched instances with respect to specific applications.

- Experience to manage IAM users by creating new users, giving them a limited access as per needs, assign roles and policies to specific user.
- Responsible for setting up databases in AWS using RDS, storage using S3 buckets and configuring instance backups to S3 bucket.
- Experience with designing and configuring secure Virtual Private Cloud (VPC) through private and public networks in AWS by creating various Subnets, Routing Table, Security Groups, NAT Gateways

WorkExperience:

Working as a DevOps Engineer in **ADRET INFOTECH INDIA PRIVATE LIMITED**(2020 – 2023)

PROJECT 3:

Project Title : Farmers.com/css
 Client Name : Zurich-Farmers Insurance
 Role : DevOps Engineer
 Duration : November 2022 to Till Date
 Environment : GIT,Tomcat Maven,Jenkins,Ansible ,Docker,Docker Compose, Kubernetes, ArgoCD-Kubernetes,Prometheus, Grafana, Terraform and Linux

Description:

Customer Self Service (CSS) is the application that enables customers to handle Auto, Home, Life and Umbrella insurance business for Zurich Farmers. This is a customer facing application where the customer can buy insurance policies, pay the bill, view the policy document, enroll for paperless option, view and update policy details. Zurich Farmers has close to 15 million policies and all of them are managed by CSS system.

Roles and Responsibilities:

- Setting up the new build environment for various applications in Linux environment.
- Automate aws infra build with terraform, prepared Terraform modules and templets.
- Automated servers onboarding automation with Ansible.
- Prepared Ansible playbooks and roles for install agent and applications on windows and Linux.
- Managed to organizational standards by maintaining the source code in GIT for various applications.
- Creating and maintaining the development and release branches on GIT.
- Using Maven as a build tool, I could automate the process of building artifacts.
- Implementing Jenkins continuous integration tool including installing setting the jobs/plans and setting up the tool for deployment.
- Involved in installing Jenkins on a Linux Machine. And creating a Master and Slave configuration to implement multiple parallel builds through a build.
- Installing and configuring the GIT, Maven, Sonar, Nexus, Docker and Kubernetes with Jenkins for CICD.
- Used AWS services like EC2, S3, EBS and ELB for building infrastructure.
- Actively monitor and administer the applications and hosting environment to increase efficiency, improve reliability, and minimize downtimes.

- Measurement, optimization and tuning of system performance and ensuring that systems will run reliably and are highly available in a 24/7 production environment.
- Collaborated with development teams to containerize applications using Docker and Docker Compose for local development and testing.
- Deployed and maintained Kubernetes applications using ArgoCD Kubernetes.
- Integrated Prometheus for monitoring containerized applications, setting up custom alerts for critical performance metrics
- Configured Grafana dashboards to visualize and analyze application and system metrics, providing real-time insights into system health.
- Utilized Terraform to provision and manage infrastructure as code.
- Managing/Tracking the defects status using JIRA.
- Automating the manual process if any, by writing the Shell scripts.
- Involved in deployment of the application using Tomcat.
- Primary responsibilities include Build and Deployment of the java applications onto different Environments like QA, UAT, pre-Prod and prod.

PROJECT 2:

Client : Amica Mutual Group
 Duration : January 2021 to November 2022
 Designation : DevOps Engineer
 Environment : GIT, Github Actions,, Nexus, Shell, Apache, Jira, Maven, Docker, Ansible, Nagios, Kubernetes, AWS-EKS

Job Responsibilities:

- Responsible for Software Configuration Management, Installing Software and maintaining the Build Environment using Ansible.
- Worked on deployment automation of all the micro services to pull image from the private Docker registry and deploy to Docker swarm cluster using Ansible.
- Planning & scheduling build release time, Reviews coding.
- Administered Maven repositories source tree and user account administration, branching, merging, patch fixes, snapshots, and training users on the systems.
- Perform Build and release process through Maven
- Used Maven as a build tools on java projects for the development of build artifacts on the source code.
- Managed GIT Hub Enterprise and Automated current build process with Github Actions with proposed Branching strategies to accommodate code in various testing cycles.
- Updated existing shell scripts to reflect GIT changes
- Updated all the Github-Actions Continuous Integration jobs, dependent jobs, snapshot jobs, release jobs, Data Base deployment jobs to reflect GIT changes
- Worked on Kubernetes (aws EKS) with different environments DEV, TEST, and PROD environments.
- Deployed and maintained Kubernetes applications using Helm Charts, ensuring consistency and scalability
- Creating Ansible Playbooks, to Deploy VM and install the Components as per requirements.

- Implemented docker-maven-plugin in maven pom to build docker images for all microservices and later used Docker file to build the docker images from the java jar files.
- Implemented and managed CI pipelines using GitHub Actions to automate the software Integration process.
- Implemented a Continuous Delivery pipeline with Docker, and GitHub and AWS
- Designed and implemented a continuous build-test-deployment (CI/CD) system with multiple component pipelines using Jenkins to support weekly releases and out-of-cycle releases based on business needs.
- Extensive experience in using Build Automation tool Maven.
- Implementing a Continuous Delivery framework using Github-Actions, Ansible, Maven & Nexus in Linux environment.
- Designed and implemented a highly available Kubernetes cluster,Designed and implemented a highly available Kubernetes cluster, Utilized Helm Charts to package and deploy services and applications on Kubernetes clusters
- Orchestrated and managed AWS EKS clusters to ensure high availability and scalability for containerized applications
- Integration of Maven/Nexus, Github-ACTIONS, Urban Code Deploy with Patterns/Release, Git , JIRA

PROJECT 1:

Title : Solution Gateway
 Duration : March 2020 to January 2021.
 Role : Associate Engineer
 Environment : Git, Maven, Apache Tomcat App Server, Jenkins, Linux

Description:

The Solution Gateway is the asset management tool focused on providing access and visibility to intellectual capital. It is the trusted source for offering-aligned assets, providing a quick and easy way for you to access powerful assets in context, whether you are selling or delivering solutions.

Job Responsibilities:

- Setting up the build and deployment automation for java-based Projects by using Jenkins.
- Creating jobs using Jenkins.
- Integrated GitHub into Jenkins to automate the code check-out process
- Verify deployment logs to check for successful deployments.
- Troubleshooting application related issues by log verification.
- Worked on Jenkins by creating and scheduling jobs, builds and deployments.
- Configured the Jenkins with GitHub repository.
- Created Git Repositories and specified branching strategies that best fitted the needs for the client.
- Configured the SonarQube with Jenkins server.

- Configured the LDAP with Jenkins for security.
- Configured the nexus Artifact repository with Jenkins.
- Used Maven as a build tool on java projects for the development of build artifacts on the source code.
- Defined branching and merging strategies.
- Deployed the java applications into web servers like Apache Tomcat.
- Connected continuous integration system with GIT version control repository and continually build as the check-in's come from the developer.

TechnicalSkills:

OperatingSystems	Linux,CentOS,ubuntu,Windows
AWSServices	S3 bucket, VPC, EC2 Services, Open-VPN, SNS,CloudWatch, Storage services, APP-Stream, Cloud-Front,ElasticBean Stack, Complete-VPC,RDS, AWS-TransitGateway,CloudFormation,ELK-Stack (Elastic Search), AWS-Originations, Service-Catalog,ECS, AWS EKS
ProgrammingLanguages	Python
Scripting Languages	Shell Scripting
VersionControlTools	Git,GitHub
ContainerizationTool	Docker, Docker compose
AutomationTool	CloudFormation,Terraform.
ServerlessServices	ECS,AWSLambda
CICDTools	Jenkins, GitHub Actions
Build Tool	Apache Maven
Configuration Management Tool	Ansible
Monitoring Tools	Cloud-watch,Nagios, Prometheus, Grafana, ELK-Stack
Code Quality (continuous inspection)	SonarQube
Artifact Repository	S3,Nexus
Container Orchestration Tools	Kubernetes, AWS-EKS, ArgoCD-Kubernetes

EducationDetails:

B-Tech in Electronics and Communication Engineering from G. Narayanamma Institute of Science and Technology (GNITS) College,Hyderabad.(2016-2019)

Self-Summary:

Optimistic,Analytical&DecisionMaking,Co-operative andkeenobserver,Athirst forSkillUp-gradation.

I hereby declare that the information furnished above is true to the best of my knowledge and belief.

Place: Hyderabad
