- Overall, 2.6+ years of experience in ETL Testing and Data quality Assurance
- Work experience in Greenplum, PostgreSQL, SQL server, Oracle, SSMS (SQL Server Management Studio), SSIS (SQL server integration services), Talend Data Quality, Jira, US healthcare

Work Experience

ETL tester /Data quality Assurance

ACS Solutions (Innova solutions)

June 2021 to Present

Environment: DataStage, Greenplum, PostgreSQL, SQL server, Oracle, SSMS, SSIS, DB Deployer, JIRA, Service now

Roles and Responsibilities:

- Followed Agile methodology (sprint and kanban) for gathering business requirements, analyzing & implementing the solutions
- Collaborated with Business Systems Analysts (BSAs) to gather business requirements, ensuring a clear understanding of expectations and needs.
- Reviewed business requirements and compared them to actual expectations. When discrepancies were found, I provided observations and worked to correct and align the business requirements accordingly.
- Based on the chosen testing approach, I formulated comprehensive test plans, test cases, and test data. Additionally, I prepared Quality Assurance (QA) scripts to guide testing efforts.
- Leveraged SSIS (SQL Server Integration Services) and SSMS (SQL Server Management Studio) tools for automating testing processes, streamlining ETL and database testing where applicable. e.g.- Created automation script for DDL and data validation between servers. Reduced 48-hour task to 2 hours during Facets upgrade.
- Conducted QA on development changes, including table validation, data extraction validation, and ETL job testing, ensuring early issue detection and resolution.
- Performed data quality testing using Talend Data Quality tools and conducted data profiling, data cleansing, and other checks in the database to validate and enhance data accuracy.
- Quickly addressed data discrepancies, anomalies, or unexpected results by debugging and backtracking issues, providing root cause analysis in a timely manner.eg- Having a Defect ratio of 35-40% per total tasks
- Utilized Jira to create defect reports and collaborated closely with the team to expedite issue resolution, maintaining a focus on minimizing downtime.
- Took a pivotal role in deploying development changes to production for both databases and ETL objects, employing DB deployer and DataStage tools. Proficiently identified and communicated reasons for failures to the development team, enabling prompt corrections of ETL job and database changes through Jenkins.

- Maintained QA test documents and explained the QA test cases used for User Acceptance Testing (UAT) and business validation, contributing to successful UAT signoffs.
- Conducted knowledge transfer sessions for (2) junior staff members and internal project members (6), emphasizing Facets Tables to elucidate the connections between business requirements and source tables, thereby enhancing their comprehension of the data.
- Successfully managed direct client communication, independently seeking task clarifications, addressing queries, gathering requirements for new assignments, and proposing strategies for application enhancements.
- I am proficient in Data Warehouse and RDBMS concepts.
- Having solid knowledge in writing SQL queries.

Education

Bachelor of Technology in Electronics and Communication Engineering in Electronics and Communication Engineering

Keshav memorial institute of technology

2021
