SUMMARY

- Results-driven Java Fullstack Developer with with two years eight months of experience specializing in building robust and scalable applications. Proficient in Java, SQL, Spring MVC, and microservices architecture. Adept at delivering high-quality code and resolving complex technical challenges.

EDUCATION

- Madan Mohan Malaviya University of Technology** Gorakhpur, India
Bachelor of Technology - Electronics and Communication; Percentage: 77.2 July 2017 - June 2021

SKILLS SUMMARY

- Languages/Frameworks:** Java, SQL, ElasticSearch, Spring MVC, Microservice, Rest API, Spring Boot, Spring Security, JPA, React
- Tools:** GIT, Eclipse, Git, Maven, IntelliJ, Postman, Jira, SonarQube
- Platforms:** Linux, Windows
- Courses:** Data Structures, Algorithms, Operating System, Networking, MySQL
- Certification:** Java, SAFe Agile
- Miscellaneous:** Agile Methodology, Ticket handling, Debugging, Issue Resolution, Agile, CI/CD, XML, JSON

EXPERIENCE

- CGI**
Associate Software Engineer JULY 2022 - presently
 - Migrated services from a Service-Oriented Architecture (SOA) to a Microservices architecture can yield several benefits, including enhanced scalability, reduced complexity, increased cost savings, improved performance, and enhanced collaboration.
 - Conducted comprehensive testing of Implemented APIs, including unit testing, integration testing, performance testing, and reliability testing to assess application flow, code quality, load, latency under varying user conditions and attaining a commendable 90 percent code coverage to ensure the resilience of micro-services
 - worked on complex requirements including dynamic user authentication, authentication/authorization based on role's based on workflow approve access to reduce in multitasking using spring security
 - Utilized CI/CD pipelines to address errors encountered during the build and deployment phases, ensuring smooth progress and efficient delivery of software solutions.
 - Enhanced application performance through optimising code complexity and SQL queries results in 40 percent decrease in load time.
 - Worked on client reported defect's, handled QA logged defect's also worked with front-end team to integrate React components using JavaScript, also worked on documentation using Swagger

Jio Platforms Limited

- Jr. Software Developer* October 2021 - july 2022
 - Developed a Network Data Analytics Function (NWDAF) for 5G networks. Utilizing REST APIs from 3GPP documentation, I designed a microservice architecture. I also managed Elasticsearch mapping for efficient data storage. Additionally, I contributed to both client and server-side development and created a simulator for comprehensive testing
 - Technologies used in project TechStack Used in project Advance Java, Netty as Embedded Server, Microservices, JSON, REST-API, HTTP client.

Plumocot Systems - Intern

- Student Developer (Intern)* Remote
Jan 2019 - April 2019
 - Unity Platform:** Argumented Reality and virtual Reality using Unity, Integrated it into Android Application also contributed on Implementing features and testing it

PROJECTS

- Bank Application :** TechStack used in this projects are JAVA, JDBC and MySQL, i have implemented user cases like login, signup, withdraw amount, credit amount, transfer money, view money, login as admin etc. in console based application and also implemented Junit test cases
- Dynamic website for restaurant- (HTML, CSS, BOOTSTRAP, JAVASCRIPT, JQUERY):** Dynamic website compatable to all size of screen and having multiple pages it is divided into navbar, mainbody, and footer in navbar used bootstrap also to make design faster

HONORS AND AWARDS

- NCC B certificate and camp certificate - May, 2020
- NCC C certificate and camp certificate, 2021
