CAREER CONSPECTUS

- Data scientist with 3.10 years of experience in delivering valuable insights through data analytics and machine learning driven modelling solutions to challenging business problems across various domains. Well versed in Python & SQL programming & worked with large data sets using different classification, regression, machine learning algorithms.
- Experience in implementation of Machine learning algorithms covering Classification, Regression, Clustering, Time series Forecasting, and Natural Language Processing
- In-depth knowledge in **SQL Server** with experience in designing and implementing databases, writing queries, stored procedures, functions, triggers and views.
- Good team player with excellent communication skills and strong attitude towards learning new technologies.

TECHNICAL SKILLS

Programming languages	Python
Database	SQL Server, MySQL Server, PostgreSQL
ML/NLP Libraries	Pandas, NumPy, SciPy, Scikit Learn, NLTK.
Tools	PyCharm, Jupiter Notebook, Azure, AWS, SQL Alchemy
Visualization tools	Tableau, Matplotlib, Seaborn
Version Controlling Tools	GitHub, TFC
Skills	Data science, machine learning, python, SQL, Data analysis, Statistics, NLP
Web frame works	Django, Flask

EXPERIENCE

Sequence of Alarms & Historical Data, Supra Controls Private Limited-- (10\23 to 01/24)

Description: Developed a model to identify the risk factors associated with chatter and Managing patterns related to alarm data. it includes the number of unique tags, the totalNumber of calculations, and the average memory usage per calculations adjust the Information as needed.

Responsibilities:

- Analyzing the data using machine learning and statistical techniques to identify patterns that are associated with in time period.
- Identify features and factors that contribute to the prediction of chatter.
- Fetches data from the PostgreSQL database in parallel for each table within the specified date range.
- Used packages such as Numpy, Pandas, Scikit Learn to perform various analysis as needed.

Customer Churn Prediction, Super code games– (12/21 to 07/23)

Description: Developed a model to identify the risk factors associated with churn and predicted the churn probability for each potential customer, which would help the organization to come up with a possible strategic retention plan.

Responsibilities:

- Understanding the business problem and identifying the mostsignificant features from the data sets shared by the client.
- Manipulation and exploratory data analysis to identify, analyze and interpret data to find out trends/ Performed data cleansing, data patterns in large data sets using python.
- Developed Churn model for insurance sector using and provided association rules to provide specific conditions in which customers have left the company. This enabled the client to target current customers who satisfy those conditions and come up with strategies to reduce churn significantly.
- Used packages such as NumPy, Pandas, Scikit Learn to perform various data analysis as needed.

Sensitive data discovery identification, Super code games– (12/19 to 11/21)

Description: Developed Data Discovery In-house tool (DD) at Super code games to automate the process of identifying sensitive data across a data set, such that data is not lost, misused, or accessed by unauthorized users. DD tool gives enterprise teams deeper visibility and control over the data by quickly scanning the data using pattern search, machine learning and natural language processing techniques to generate a detail report of data which are classified as sensitive. The tool actions contributed for 30% automations in businesses every year.

Responsibilities:

- Build data pipelines which includes data collection from multiple sources, data cleaning, feature extraction, model validation and visualization.
- Performed text analytics to identify sensitive data across a data set using natural language processing concepts like named entity extraction and machine learning algorithms like naive bays to classify data into predefined codes/classes
- Used packages such as NumPy, Pandas, Scikit Learn, SciPy, NLTK to perform various data analysis as needed.

SCHOLASTICS

- ✓ B Tech(EEE) - JNTU Kakinada - 62% of marks - (2013 - 2017)
- ✓ Intermediate – Board of Intermediate Education (AP) – 74% of marks - (2011 -2013).
- ✓ SSC - State Board (AP) - 71% of marks - (2010 - 2011).
