## SUMMARY

Dedicated and results-oriented professional with a Bachelor's degree and 2 years of experience in data analytics. Motivated and detail-oriented professional seeking a challenging role in the field of Analytics and Operations, leveraging a strong skillset in SQL, Python, Power BI, and Tableau to monitor key metrics, drive strategic decision-making, and enhance overall business performance.

---

## EXPERIENCE

### Senior Analyst

Capgemini

October 2021 - Present, Pune

- Transformed the raw data from 5+ different sources into usable data by applying transformation at view level and stored in Common Data Model (CDM) for visualization purposes.
- Researched, analyzed, and interpreted large volumes of data to identify trends, opportunities, and audiences.
- Assisted in the development and testing of machine learning algorithms for predictive analytics and data-driven decision-making.
- Conducted exploratory data analysis and feature engineering to improve model accuracy and interpretability using Python, SQL, and SAS resulting in more efficient data management and reporting.
- Achieved customer requirements by working with various **Tableau Desktop** functionalities.
- Involved directly with business executives to identify key design and business questions and standardize key metrics and measures.

---

## PROJECTS

### Server Availability Report

- Designed a dashboard for clients to monitor Server availability and provide insights about uptime percentage and outages.
- Collected monitoring data of cloud and on-premises servers from 2 sources - Opsview and Splunk.
- Joined this data with ITSM data (last 6 months) to gather insights about incidents raised for down servers.
- Created **sets** to view the top 10 and bottom 10 servers by availability.
- Applied various **actions** for navigation. By clicking on the server name the user can navigate to the details page and view the actual outage time for a server and 7 other columns giving key insights.
- Used 5+ **parameters** to control different dimensions that can affect availability i.e., related tickets raised in ITSM, planned downtime. Users can control these parameters and downtime calculations vary according to these.
- Improved Splunk and ITSM team's integration, by identifying top 10% down CI's, which resulted in high customer satisfaction.

### Lead Score Case Study

- X Education, an online course provider, implemented a lead scoring model to improve lead management and increase conversion rates.
- Facing a typical rate of 30%, the company aimed to meet the CEO's ambitious target of 80% conversion.
- Through meticulous data analysis and machine learning techniques, a predictive model was developed to assign lead scores based on various features.
- Upon integration, the model enabled the sales team to prioritize leads effectively, resulting in a significant uplift in conversion rates
- Beyond revenue growth, the initiative enhanced sales team productivity and solidified X Education's competitive position in the market, highlighting its commitment to innovation and customer-centric practices.

---

## SKILLS

**Technical Skills:** SQL, Python, Tableau, Excel, Statistics

**Other Skills:** Presentation, Teamwork, Conflict Resolution

---

## EDUCATION

### Bachelor of Engineering

St. Vincent Pallotti College of Engineering and Technology • Pune- 2021

### Higher Secondary

St.Paul Junior College • Nagpur- 2017
