

Kunwar Sourabh Kumar Singh

Senior Cloud Engineer

Senior Engineer - Cloud Services and Software with advanced understanding of Java Spring Boot framework, Docker, Kubernetes, Google Cloud Platform, and Machine Learning. Detail-oriented team player with strong organizational skills. Ability to handle multiple projects simultaneously with a high degree of accuracy.

Work History

2022-07 - Current	Senior Engineer - Cloud Services and Software <i>LTIMindtree, Bengaluru, Karnataka</i> - I am currently working on LTIMindtree's GenerativeAI product, CanvasAI, and have experience in designing and developing scalable enterprise-grade solutions where I have been involved from scratch. I collaborate with a team of 143 members. This software can generate human-like text by analyzing provided prompts, images, and code. In this project, I am involved in the development of a Generative AI product. I work in an Agile environment with technologies such as Java Spring Boot, Angular, Python Flask, and various LLMs. I am proficient in Angular, Java, Python and LLMs. - Worked on Internal project Talent Recruitment Program with team of 10 members. This app allows companies and candidates to arrange, conduct, and review interviews. - Used strong analytical and problem-solving skills to develop effective solutions for challenging situations. - Passionate about learning and committed to continual improvement.
----------------------	---

Education

2020-08 - 2022-05	Master of Technology in Mechanical Engineering <i>Indian Institute of Technology (ISM) - Dhanbad</i>
----------------------	--

Accomplishments

- Published two research Paper based on Machine Learning
- <https://doi.org/10.1016/j.matpr.2022.06.253>
 - <https://doi.org/10.1002/pc.26974>

Certifications

2022-12	Certified Kubernetes Application Developer
2023-04	Google Cloud Platform Associate Cloud Engineer

Publications

- Computational data-driven based optimization of tribological performance of graphene filled glass fiber reinforced polymer composite using machine learning approach:** Implementation of machine learning model to analyze the mechanical properties of composite materials. For this task, I utilized the Python programming language along with the Pandas, NumPy, and Scikit-learn libraries. <https://doi.org/10.1016/j.matpr.2022.06.253>
- Data-driven modeling for predicting tribo-performance of graphene-incorporated glass-fabric reinforced epoxy composites using machine learning algorithms:** I utilized the Python programming language, along with the Pandas, NumPy, and Scikit-learn libraries, to implement a machine learning model for analyzing the mechanical properties of composite materials. <https://doi.org/10.1002/pc.26974>
