

LALIT MOHAN SONA | JAVA DEVELOPER

Bangalore, Karnataka, India | +91-6363018449 | sona.lalitmohan06@gmail.com

PROFESSIONAL SUMMARY

I am a proficient **Java Developer with 3.1 years** of experience, dedicated to crafting robust applications. My skills are centered around the creation of RESTful APIs and leveraging Spring technologies. I am driven by a strong enthusiasm for backend development, which motivates me to consistently perform at a high level and collaborate seamlessly within dynamic team environments.

CORE COMPETENCIES

- **Spring Framework** (DI, IoC, AOP, Web)
- **Spring Boot** (Auto-Config, Starters, Annotations)
- **RESTful API** Design (HTTP, URIs, Status Codes)
- **API Integration**
- Version tool (**Git**, **GitHub**, **Git bash**)
- DTO Design with **Model Mapper**
- Database (**JDBC**, **JPA**, **Hibernate ORM**)
- **JSON** Manipulation
- **SQL** Querying and Schema management
- Familiar with these **IDEs**: - Eclipse, Postman, Spring Tool Suite, IntelliJ IDEA, VS Code
- **MVC Architecture (Spring MVC)**
- Front-End (**HTML**, **CSS**, **JS**)
- **J2EE** Concepts (**Servlets**, **JSP**, **JPA**)
- **Agile** software development
- **OOPs** Principles
- Unit Testing (**Junit**)
- **Microservices** principle
- **AWS** Cloud Services
- **JWT Token Authentication** (securing APIs and managing user session)
- **Spring Security**

EDUCATION

- **B. Tech** from **BPUT University**, Odisha

PROFESSIONAL EXPERIENCE

Sigma InfoSolutions Ltd.

Java Backend Developer | 2nd Dec 2020 - Present

- Designed **system architecture following MVC pattern** and defined data models, employing Hibernate JPA and Lombok for efficient data modeling.
 - **Created RESTful APIs** for essential models using Spring MVC, and maintained the repository layer with Spring Data JPA.
 - **Implemented DTO classes** for seamless data transfer, incorporating mapping with Model Mapper, and employed MySQL for data storage, executing CRUD operations with JPA.
 - **Ensured robust API security with Spring Security**, configuring JWT authentication for user sessions and role-based access control, and conducted thorough API testing using tools like Postman and JUnit to validate functionality.
 - **Developed and implemented the service layer** to handle business logic, ensuring a clear separation of concerns in the application's architecture.
 - **Generated and verified JWT tokens** to enhance authentication and authorization processes, contributing to a secure and efficient user session management system.
-

PROJECT DESCRIPTION

PROJECT NAME: ZUMPER-2.0

TECHNOLOGY : Java , Hibernate ,JDBC, Spring MVC, Spring Boot ,
Spring Security, Spring MVC, RESTful Webservices,
MySQL DB, Postman, Swagger, Junit, Git and GitHub.

TEAM SIZE : 7 Members

METHODOLOGY: Agile Scrum

- Developed an expansive **vocational rental website**, establishing a resilient platform that facilitates connections between property **owners** and potential **customers**. This versatile marketplace empowers property owners to effortlessly list their rentals, while users can seamlessly explore, review, and inquire about both permanent and vacation rental options.
- The project is extensive, comprising numerous modules such as User, Property Listing, Property Search, Online Booking, Property Details, Tenant/Buyer Verification, Review and Rating, Property Management, Subscription Fee, Legal Document Verification, Q&A, etc. My responsibilities primarily involved API development using Restful web services for **various** modules, including **User, Property Listing, Property Search, Online Booking, Review and Rating, Q&A, Chat Assistance, Payment** gateway, **Email** integration, **OTP** verification etc.

PROJECT DESCRIPTION

DURATION : 1.2 year.

PROJECT NAME: B-FIT

TECHNOLOGY : Java, JDBC, Hibernate, Spring Boot, Spring Security,
Spring MVC, RESTful Webservices, MySQL DB, Postman,
, Swagger, Junit testing, Git.

TEAM SIZE : 7 Members

METHODOLOGY: Agile Scrum

- The online appointment and doctor booking application is a user-friendly platform facilitating seamless scheduling of medical appointments. Patients can easily search for and select doctors based on specialization and availability, while real-time calendars prevent overbooking. The system sends automated reminders and notifications, and optional telemedicine features enable virtual consultations. A secure payment gateway allows for hassle-free transactions, and a review system ensures transparency. Admin tools provide efficient system management.
 - My responsibilities primarily involved API development using Restful web services for **various** modules, including **User, Doctor Search, Appointment Booking, Review and Rating, Q&A, Chat Assistance, Payment** gateway, **Email** integration, **OTP** verification etc.
-

ROLES AND RESPONSIBILITIES

- Developed **RESTful APIs** using **Spring MVC** for real estate project.
 - **API Development:** Designed, implemented, and maintained Java-based APIs, ensuring scalability and efficiency.
 - **Application and API Security Enhancement:** Strengthened security with user features and **JWT** token.
 - Implemented **microservices** and sorting techniques for enhanced data handling.
 - **Third-Party API Integration:** Seamlessly integrated third-party APIs for improved communication.
 - **Spring MVC Utilization:** Leveraged Spring MVC for modular component development and project structure improvement.
 - **JSON Manipulation:** Expertise in handling **JSON** data for effective communication between client and server.
 - **Database Management:** Designed and optimized database schemas for improved performance. Utilized Hibernate for ORM mapping, ensuring data integrity and consistency.
 - Implemented complex SQL queries and database optimizations.
 - **Development Tools:** Familiarity with **IDEs** such as Eclipse, Spring Tool Suite, **IntelliJ** IDE, and VS Code.
 - Efficient use of **DTO** design patterns with Model Mapper for seamless data transfer.
 - **Entity Class Design:** Designed entity classes to maintain data integrity and consistency.
 - **Backend Business Logic:** Executed backend business logic within the service layer.
 - **CRUD Operations Execution:** Proficiently executed CRUD operations using Spring Boot repository.
 - Proficient in **Hibernate** and Spring **Data JPA for ORM**
 - **Code Refactoring:** Conducted code refactoring to improve code readability and maintainability. Implemented design patterns to solve recurring problems and enhance code structure.
 - Followed by **Agile methodologies** for iterative development and timely delivery.
-
