PROJECTS

TaxCPC Data Import:

Framework: Spring Boot, Hibernate

Web Technology: HTML, CSS, JavaScript

Programming language: JAVA

Database: Oracle

Client: Figment Global Solution

TaxCPC provides smart solutions for every enterprise to simplify their tax filing 24*7. This project is used to Import Large-size Files of Banks into a Database.

my role is to develop Java code to connect with databases and import large-size files into databases and design pages as per client requirements

Document Management:

Framework: Angular 8, Spring Boot, Hibernate

Web Technology: HTML, CSS

Programming language: JAVA

Database: Oracle

Document management is used to import documents into a database and from this project, we can view that document also there are many operations in the project like edit, delete, and view.

Here my role is to design HTML as per client requirements and develop Java code such that to perform operations like save, delete and update.

Bank APIs Utility:

Framework: Hibernate

Programming language: JAVA

Database: Oracle

Bankers use the Bank APIs project for payment processing.

My role is to develop a Java code so a bank can make payments by calling APIs.
