Bachelor of Engineering at PRIST University, Tanjavur

EXPERIENCE

CSS Corp, Chennai

Software Test Analyst

July 2019-Till date

Project: Myer- Automation

Description: It was an Australian based e-commerce website named “Myer” .It offers products like women's, men's, and children's clothing, footwear and accessories, cosmetics and fragrance etc..

Roles and Responsibilities:

- Analyzing the user stories.
- Based on the acceptance criteria I will do feasibility check and decide what all the part going to done by automation.
- Have used the concept cucumber framework in my project.
- I will create a feature file and also test data. In feature file I will be writing test cases for each scenario.
- In Step definition there will be a code snippet and need to write the required business logics.
- Have created separate file for each page as per application and stored all relevant locator by using POM concepts.
- Expertise in finding locators by using x-path.
- Have used the tool maven for executing the selenium framework.
- In POM.xml file where I store all the dependencies.
- Have implemented singleton concept in my project.
- Have used base class where I will have all reusable methods.
- Have maintained property file which have key and value pair combination.
- To generate JVM report have used reporting class.
- Tracking defects until defect closure.
- Working in Agile methodologies and participated in agile ceremonies meetings.
- And attend daily stand-up call meetings with my team members and discuss what modules have completed or if facing any issue will be discussed in that meeting.
- I will push my code to my branch by using GIT tool.
- Once the user stories are completed, I will give pull request to add my code in master.

Project: Peoplecare - Manual and Automation

Description: The project is Health care based in Australia that provides goods and services to treat patients with curative, preventive, rehabilitative or palliative care

Roles and Responsibilities:

- Understanding Business Requirement Specification.
- Based on the user stories I will do feasibility check and decide what part can be done by manual.
- Prepare test cases, test scenario, test data. I have validated test data with valid and invalid inputs for positive, negative and integration testing.
- Get review from peer lead or team members.
- Once it is approved, I will start scripting and executing the script.
- While I am testing, I will raise bugs and track defects until closure.
- Tool Used: JIRA for bug tracking.
- Once the bug is closed will update the status as done.
- Currently working in agile methodologies and have participated in agile ceremonies meetings.

DECLARATION

I here by declare that all the above stated information is true to the best of my knowledge.
