EXPERIENCE

ConstaCloud, Korba — Server Admin

NOVEMBER 2022 - NOVEMBER 2023

Server Deployment and Configuration:

- Responsible for Installation, configuration, and maintaining the **LAMP** stack on **AWS EC2 instances**.
- Set up and customize **AWS EC2 instances** environments based on project requirements of laravel and wordpress deployment.

Performance Monitoring and Optimization:

- Monitoring server performance through **AWS Cloudwatch** metrics and analyzing resource utilization, identifying bottlenecks on **AWS EC2 instances**.
- Implemented performance optimization strategies, such as tuning **Apache MaxRequestWorker** and **php max_children, max_request and idle timeout** configurations for better resource allocation.
- Responsible for performing routine system checks to ensure the reliability and efficiency of **AWS EC2 instances**.

Security and Patch Management:

- Responsible for Implementing and maintaining security measures, including firewalls, intrusion detection systems, and security patches.
- Keep **AWS EC2 instances** up to date with the latest patches and updates to **mitigate security risks**.

PROJECTS

Taskmaster Microservice on Kubeadm (October 2023- Present)

- Created and configured Kubernetes cluster on **EC2 t2.medium instance** with **kubeadm**.
- Deployed Flask microservices and MongoDB on Kubernetes cluster and created **NodePort service** to access the microservice.
- Created **persistent Volume** on Kubernetes Cluster for MongoDB for storing new tasks registered on taskmaster microservice.

Automating the Delivery of Highly Scalable Reddit Clone Application using CI/CD Pipeline with Docker, Docker Hub, and Kubernetes Minikube (Nov 2023- Present)

- Created a **EC2 t2.micro instance** for **CI** and configured **Docker** on it to **containerized** the Reddit Clone App, created its **docker image** and pushed into **docker hub container registry**.
 - Created a **EC2 t2.medium instance** for **CD** and configured **Docker** and **Kubernetes Minikube** on it to deploy the container images to the appropriate environment leveraging Kubernetes features such as **services and ingress**.
 - Implemented monitoring and logging functionalities to identify and troubleshoot any issues that may arise. The pipeline was designed with automation in mind, minimizing manual interventions and reducing the likelihood of human errors.
-

SKILLS

- AWS
- Ansible
- Terraform
- Docker
- Kubernetes
- Kubescape
- Jenkins
- Git & Github
- Linux
- SQL Workbench

PROGRAMMING/SCRIPTING

Bash: intermediate level of writing automation and provisional scripts.

Python: intermediate level experience with libraries like boto3 and beautifulsoup.

EDUCATION

Guru Ghasidas University, Bilaspur — MCA

2019 - 2022 - Computer Science and Information Technology

CGPA - 7.5

MCMIT, Korba — BCA

2015 - 2018 - Computer Science and Information Technology
