Cognizant Technology Solutions

Sep 2018 – Jan 2022

Chennai, Tamil Nadu

Project: Walgreens

Project Description:

Walgreens Boots Alliance is an integrated healthcare, pharmacy and retail leader serving millions of customers and patients every day. Walgreens Boots Alliance has many sub projects. The Project I worked was asembia. This is a web based application. This project track the patient information like patient name, contact details, diagnosis details, Rx details, Refill details, delivery of drugs, delivery tracking, shipment ect., The patient information is stored in Microsoft SQL. We use SQL query to fetch the patient details. This project also has automation testing. I am also part of automation testing for sometime

Responsibilities:

- Have a call with BA to know about the future releases
- Make a test plan, test strategy based on the Business requirement
- Do Test design and execute the test cases
- Performed system testing and completed on time
- Raised all the clarifications on the requirements during scrum/triage calls with BA
- Sprint stories were completed with proper testing and documentation
- Involved in E2E Testing
- Identified the defects earlier to ensure Zero defect leakage in production environment
- Followed up with development team to get the defect fix until it is tested with no issue
- Framed SQL Queries for all the data validations performed
- **Do Automation Testing using Selenium Java**
- Successfully completed all the release items
- Provided walkthrough to Business on the test results for each of the story handled
- Provided KT on the project to the newcomers and clarified doubts

Associate

Cognizant Technology Solutions

Aug 2022 – Current

Project: Option Care

Project Description:

Option care is the largest independent home and alternate site infusion services provider in the United States. This project helps a patient to provide a drug or medical equipment that they needed through courier. The process when patient opt for optioncare, their details are stored, when they need any drug or medical equipment, based on the prescription they send the order to the patient through delivery after getting approval from A/R manager. These all process is in one application, we tested all these process in that application

Responsibilities:

- Have a call with BA to know about the future releases
- Make a test plan, test strategy based on the Business requirement
- Do Test design and execute the test cases
- Performed system testing and completed on time
- Raised all the clarifications on the requirements during scrum/triage calls with BA
- Sprint stories were completed with proper testing and documentation
- Involved in E2E Testing
- Identified the defects earlier to ensure Zero defect leakage in production environment
- Followed up with development team to get the defect fix until it is tested with no issue
- Framed SQL Queries for all the data validations performed
- Successfully completed all the release items
- Provided walkthrough to Business on the test results for each of the story handled
- Provided KT on the project to the newcomers and clarified doubts
