

Mosin Khan

Data Scientist

I'm a dedicated Data Scientist with a specialized skill set in quantitative modeling, focused on crafting solutions that address complex challenges. I am actively pursuing opportunities to enhance company's growth while advancing my professional development in this field. My strength lies in thriving within collaborative, team-oriented work environments.

EXPERIENCE.

Elixir.AI (Pvt. Ltd.) | Aug-2021 - Present | Pune, India.

Data Scientist | Python, Pandas, Power-BI, Tableau, Selenium, BeautifulSoup, SQL, TensorFlow, keras.

Description:

- Facilitated productive client discussions to **diagnose business challenges** and **define requirements**.
- Created a **web scraping** scripts for publicly accessible websites, optimizing data collection processes and resulting in an impressive **88% reduction** in the **time required** for **gathering data**.
- Utilized **SQL** to extract data from the client's databases.
- Harnessed the power of **panda's** functions to perform ETL (Extract, Load, Transform) operations, effectively **cleansing and manipulating data**. This approach yielded remarkable **time savings of 73%**, particularly when dealing with large datasets.
- Designed data-driven **dashboards** to monitor key performance indicators (KPI's), enabling well-informed **decision-making** and offering real-time insights into crucial **business metrics**. This strategy contributed to a **25% boost** in business growth.
- Utilized **python** to **automate** daily **reporting** and create **custom metrics**.
- Revamped the data processing system, resulting in a remarkable **70% reduction** in **report completion time**. This transformation proved highly effective in optimizing operations.
- Developed a store **image recognition and categorization model** that significantly enhances efficiency by saving **83.33%** of the team's manual workload.

Elixir.AI (Pvt. Ltd.).

Data Scientist | Python, Pandas, Excel.

Description:

- Utilized **panda's** functions to execute ETL (Extract, Load, Transform) operations, efficiently **refining and manipulating data**.
- Developed a **model** capable of detecting **illegal buildings, encroachments, and unauthorized garbage dumps**. Our **solution** has substantially reduced the manual workload of the data analyst team by an impressive **72.3%**.

EDUCATION.

Bachelor Of Engineering in Computer Engineering. (B.E).

SPPU(Pune university) JSPM's jayawantrao Sawant College of Engineering.

2020

Pune

CORE SKILLS.

Programming language: Python

Visualization Tools: Power-BI, Tableau, Excel

Database Languages: SQL, Mongo db.

Machine Learning, Statistics, Natural Language Processing (NLP).

web Scraping :Beautiful soup(bs4), Selenium

DATA SCIENCE PROJECTS.

Face Recognition using open CV and VGG 16 Transfer Learning.

- I have proficiently built a **model** using the OpenCV and Keras libraries to **accurately** identify my face with a **92%** success rate.

Spam Classifier.

- I've developed a **model** with an accuracy rate of **83.6%** for classifying **spam SMS and emails**. This model leverages the **BagOfWords** technique to convert text data into a numeric format and employs **Naive Bayes** for processing.

Optimization of steel composition using genetic algorithm.

- This solution significantly decreases the **manual** workload of the **metallurgy expert** by **95.4%**, enabling the attainment of the desired hardenability in specific steel formulations through the utilization of **Genetic Algorithm, Optimization, crossover, and mutation**. The skills employed encompass **Java and Python**.

CERTIFICATES

Machine Learning

Python

Statistics

ADDITIONAL SKILLS.

Good communication skills

Problem-Solver

Teamwork and Collaboration

Adaptability

Time Management
