## Education

**BLDEA's V.P. Dr. P.G. Halakatti College of Engineering and Technology**

**Sep. 2019 – May 2022**

*Bachelor of Engineering in Electrical and Electronics - CGPA - 7.5*

*Vijayapur, Karnataka*

**Governmebnt Polytechnic College**

**2015 - 2018**

*Diploma in Electrical and Electronics - Percentage - 76.69%*

*Vijayapur, Karnataka*

**Poorna Prajnaya English Medium School**

**2005 - 2015**

*SSLC - Percentage - 76.64%*

*Rampur, Karnataka*

## Relevant Coursework

- Power Electronics
- Analog Electronics
- Switchgear and Protections
- Power System
- Digital Electronics
- Basic VLSI Design
- Electrical Machines 1
- High-voltage Engineering

## Experience

**Shri Prabhulingeswara Sugars and Chemicals Ltd.**

**April 2022 – May 2022**

*Internship Industrial Training*

*Siddapur, Karnataka*

- It is integrated company primarily engaged in manufacture of sugar and allied products. Plant is fast-growing industrial group with capacity of 12000 TCD and 55.5 MW power generated at cogeneration unit.
- Assigned to observe the basic workflow along with different parts of Power Generation Plant and its transmission to various high power components.
- Got an exposure and knowledge about different components used in Power Generation Plant like alternators, turbines, power transformer, distribution transformer, boilers, cooling towers, master power unit

## Projects

**Automated Crop Monitoring System | Arduino Uno**

**January 2022**

- This Project targets to monitor the soil quality and the crop condition by measuring all the underlying parameters via sensors and give a detailed report which can help in further betterment of the yield.
- Sensors will give the reading of parameters like the salinity level of sand, water content, temperature, humidity and the air quality of the surrounding environment. The readings are given to Arduino which on further processing gives us results which can be used in watering system and safety equipments.

**Automated Water Supply and Distribution | PLC and SCADA**

**November 2021**

- In any country facilitating potable drinking water is the vital service to the public. Though urban areas are well developed but water distribution service is not automated in some of the places..
- Hence efficient water supply is possible only when all the prime requirements are met. Superior automated process of water distribution system using SCADA and PLC along with water theft monitoring is presented in this paper.
- System facilitates monitoring and control of the entire system from control using SCADA and PLC. Unskilled operator can easily understand and restores the data for graphical interface which is more advantageous. Real-time water theft identification and around 75 percent of water loss can be saved. .

**Hybrid Power Generation using Piezo electric Transducer and Solar Panel | Circuit Analysis**

**October 2020**

- Solar electricity is renewable source of energy that has been with use since the onset of life. Solar energy is captured through the solar panels and then it is converted to solar electricity using Photovoltaic (PV) technology. PV solar panels are longer lasting and efficiently convert energy from the sun to electricity.
- Piezoelectric Energy Harvesting is done by the piezoelectric effect. The essence of the piezoelectric effect works as follows: by applying a mechanical stress to a crystal, one can generate a voltage or potential energy difference, and thus a current..

## Technical Skills

**Languages:** Python, C

**CAD and Soft Skills:** AutoCAD, MS Office Suite

**Hardware :** Circuit Analysis, Basic VLSI Design

- This paper proposes an advanced automated water distribution system utilizing SCADA and PLC technologies, complemented by water theft monitoring, to enhance efficiency and reliability.
- By harnessing power from water flow, process parameters are developed and validated in a prototype model, addressing the critical need for automated water supply in urban areas
- Additionally, a GSM modem facilitates real-time communication to alert authorized operators of any water theft or pipe leakage incidents, ensuring timely intervention and maintenance.
