Having over all 2.5 years of Experience in IT Industry in automating, and optimizing mission critical deployments over large infrastructure.

Around 2 years of experience on creating CI/CD pipelines

Having knowledge and experience on linux administrations

Created and maintained Continuous Integration/Delivery pipelines using GitHub

Actions, Jenkins.

Integrated security checks and vulnerability scanning into the CI/CD pipelines to ensure the early detection of security issues and compliance with industry standards.

Having knowledge on orchestrated Docker container cluster using kubernetes.

Created appropriate dashboards, log management, backup, and monitoring systems to facilitate maintenance and management of deployed software.

Creating Infrastructure as a code - Terraform

Knowledge of scripting languages such as bash.

Docker and containerized applications reducing deployment issues and probability

Implemented and managed kubernetes and openshift clusters, improving applications and resilience.

Having good knowledge and hands on experience on Repository concepts like github, bit bucket and git lab.

Collaborated with development and operations teams to streamline workflows and foster a culture of collaboration.

Implemented automated testing strategies, including unit tests, integrated tests and end to end tests, to validate code changes and reduce manual testing efforts.

Assisted in the design and implementation of disaster recovery and back up strategies for critical systems ensuring data integrity and business continuity.

Collaborated with qa teams to implement automated testing for infrastructure code.

Monitored and analyzed system performance using grafana prometheus, ensuring optimal system health and availability.

Work Experience

Devops Engineer

Cloudastra - Noida, Uttar Pradesh

June 2021 to Present

I am a seasoned DevOps engineer with a proven track record of optimizing software development and deployment pipelines. Over the past two years, I have honed my skills in automating, monitoring, and scaling infrastructure, ensuring seamless integration between development and operations teams. My expertise includes implementing CI/CD pipelines, managing containerization technologies like Docker and Kubernetes, and orchestrating cloud-based environments. I am committed to enhancing efficiency, security, and reliability in software delivery while staying current with the latest DevOps practices and tools

AWS

Linux

Jenkins, GitHub actions

Docker, Kubernetes

Open shift, ECS

Shell scripting

Networking, VPN and SSL

Apache, Nginx, Tomcat

Windows/Red hat/Ubuntu/Vmware

GitHub, Gitlab, Bitbucket, Jira, Slack

Mongodb

Grafana, Prometheus

Marriott hotels

App Server

Aws, jenkins, docker, kubernetes and openshift

:

Nginx

Marriott

Description:

The Marriott chain began with two motels in the 1950s. The first opened as a Quality in airport motel near Washington, D.C., and another motel nearby, the Twin Bridges, a few years later. With the opening of the second motel, Marriott was born as a brand name. The Twin Bridges property was demolished in 1990, but the Key Bridge property still operates, but as a full-service hotel. In 1967, Marriott opened its first resort hotel, Camelback Inn, in Arizona, United States. Marriott Hotels & Resorts expanded outside of the United States for the first time in 1969 with the opening of the Marriott in Acapulco, Mexico.

Marriott

By 1975, Marriott Hotels & Resorts had expanded to Europe, with the Amsterdam Marriott hotel opening that year.

Roles and Responsibilities:

Worked on Delivery pass functionality

Worked on fixing the defects

Worked on Creating jenkinspipeline

Understanding the requirements, design document and then writing the pipelines to fulfill requirements.

Responsible for communicating with client to understand the requirements.

Worked solving pods issues in openshift.

Involved in defect fixing and updating the status.

Responsible for timely delivery on the assigned modules / artifacts.

Project :

Title

:

Client

C-prime

:

World bank - UK

Role

:

Devops enginner

Team Size

:

Technologies

:

bit bucket - Jenkins, KY

Description:

A bank is a financial institution that serves as a secure and regulated intermediary for individuals, businesses, and governments to manage their money.

Banks offer a range of financial services, including deposit accounts, loans, investments, and payment processing. They play a vital role in the economy by facilitating the flow of funds, providing access to credit, and safeguarding deposits through insurance programs.

Roles and Responsibilities:

Worked on integrating bit bucket and jenkins

Worked on jenkins jobs

Worked on fixing the jenkins jobs failure errors

Worked on jenkins pipeline

Created unit and integration test cases with groovy

Understanding the requirements, design document and then writing the code to fulfill requirements.

Responsible for communicating with client to understand the requirements.

Project :

Title :

Betswap

Client

:

Tarun

Technologies :

Linux, AWS, Docker, Terraform and monitoring tools

App Server

:

Nginx

IDE

:

Eclipse

Tools

:

Devops enginner

Description:

BetSwap is a cutting-edge online platform designed for sports enthusiasts and bettors. This innovative platform allows users to trade or exchange sports bets with others, creating a dynamic marketplace for sports wagering. BetSwap offers a unique approach to sports betting by enabling users to buy and sell betting positions, offering more flexibility and strategic options than traditional sportsbooks. It brings together a community of sports fans looking to optimize their bets, providing a new level of engagement and excitement in the world of sports betting.

Roles and Responsibilities:

Worked on cloud platforms like AWS and GCP to deploy and manage applications.

Optimized cloud resource utilized and cost

Worked on Git and git hub to manage code and infrastructure changes

Worked on creating code pipelines in aws

Worked on creating ecs ad ecr and rds in aws

Worked on defect fixes

Analysis of New Requirements

Developed and manage infrastructure templates using tools like terraform

Worked on Docker and AWS ecs and ecr to containerize applications and manage their deployment at scale.

Setup and maintaining and monitoring system like Prometheus and grafana to track system performance and creating alerts.

Collaborate with security teams to implement security best practices and compailence standards.

Education

BTech

tech engineering college - Washington, DC

1990

DIPLOMA

Intell engineering college(JNTUA University)

Skills

- AWS (2 years)
- DevOps (2 years)
