

Nilesh S. Parihar

Associate AI Engineer

Contact

- ✉ nileshparihar594@gmail.com
- ☎ +91 738-738-7501
- 📍 Durgam Cheruvu, Madhapur, Hyderabad 500081

Hard Skill

- **Languages:** Python, SQL.
- **Web stack:** Flask.
- **Operating Systems:** Linux, Windows.
- **Database:** SQL, MongoDB, 3C(Command, Constrains, Clauses), CRUD operations, Subqueries, Window functions, Joins.
- **Machine learning**- Linear, Ridge & Lasso, Logistic Regression, Naïve Bayes Classifier, KNN, SVM, Decision Tree, Random Forest, Ada-Boost, Gradient Boosting, XGBoost, K-means Clustering.
- **Python Packages**- NumPy, Pandas, Sci-py, Scikit-learn, Seaborn, Matplotlib, Flask.
- **NLP:** Text understanding, representation & classification techniques, Text clustering skill
- **Libraries:** nltk, spacy, gensim, textblob, langdetect, googletrans, Dtale, Sweetviz, Autoviz

About Me

Dedicated and detail-oriented AI enthusiast with over 3 years of experience. Eager to learn new technologies and to apply them for real world applications. Proficient in data preprocessing, visualizing and creating insights. Seeking a challenging position in a reputed organization where I can learn new skills, expand my knowledge, and leverage my learnings

Professional Experience

- **Associate AI Engineer | FLATWORLD SOLUTIONS, Bengaluru**
3.4 Years | Dec 2019 to May 2023
- **AI/ML Engineer | CloudPlinth Technologies, Hyderabad |**
June 2023 to Oct 2023
- **Data Scientist | PharmaForce Infosoft Pvt. Ltd, Hyderabad | Oct 2023 to Jan 2024**

Key responsibilities:

- A professional with experience in Python, Data Science and Machine learning with expertise in Financial and Healthcare domain projects.
- Able to investigate Data Visualization and summarization techniques conveying key findings.
- Ability to write a clean and production code with Object Oriented Programming in Python.
- Thorough understanding of Probability and Statistics, Bayesian methods.
- Experience in data management tools - Relational and SQL databases.
- Knowledge of Python's Data Analysis and ML Libraries.
- Source code management and Version Control system using Git and GitHub

TECHNICAL SKILLS

- *Deep Learning: Neural Networks, Deep Learning, ANN, CNN, DNN, Transfer Learning, Back Propagation, Linear Algebra, Activation & loss functions, optimisers, Tensorflow 2.x, Keras,*
- *AWS: Elastic Compute Cloud, Sagemaker, Notebook instance, AWS container, Simple Storage Services S3, Deployment, Multi cloud environment.*
- *Maths & Stats: Filter, Wrapper, Embedded Method, P-Value, T-Test, Z-Test, ANNOVA test, Chi-Square Test, Info-Gain Test, Hypothesis Testing.*
- *Probability, statistics, linear algebra, probability, statistics, linear algebra.*

PROJECT DETAILS

- **Project :** **Optimization of production process and end product quality improvement.**
Domain : Manufacturing/FMCG
Duration : Apr 2022 – Feb 2023
Description : Edible oil industry is vast and rapidly growing. Our client, major player in the industry, was concerned about the high variability in quality, which was leading to increased product rejections and production losses, our regression model which was selected after scrutinizing all the technical aspects helps to optimize their refining process, reduce waste and improve the overall quality of their end product.
- **Project :** **Drug Development against Plasmodium Falsiparum parasite (Malaria).**
Domain : Healthcare/Pharmaceutical
Duration : Dec 2020 – Feb 2022
Description : Our client had a profound history of research, development, and marketing of highest quality drugs for the treatment of a wide range of diseases.
Our powerful tree-based model helps in predicting potential drug candidates reducing the time and cost of drug development, and ultimately contributing to the fight against malaria, which is a major global health concern.
- **Project :** **"Intelligent Digital Platform (IDP): Enhancing Academic Efficiency and Accessibility through AI-Driven Solutions"**
Domain : Education Sector / Education Technology
Duration : June 2023 – Present
Description : As part of the IDP (Intelligent Digital Platform) project at our university, I led the development of a smart calendar powered by AI to optimize teacher distribution among 1st, 2nd, 3rd, and 4th-year engineering classes, managing up to 3 lectures daily. Additionally, I created a virtual AI voice assistant that integrated Wikipedia and Chat GPT, enhancing accessibility and productivity within the university community. Furthermore, I implemented a "Plotting Scattered" 3D visualization, offering a proactive view of all students and presenting their academic records to facilitate data-driven decision-making and personalized support for their academic growth.
- **Project :** **"Client-Specific File Reception Prediction: A Data-Driven Insight Project. Enhancing Operational Efficiency through Predictive Analysis of Client File Reception."**
Domain : Pharmaceutical/Healthcare

Duration : Oct 2023– Jan 2024
Description : The data science project significantly contributed to organizational insights by accurately predicting client-specific file reception over an extended period. Leveraging machine learning models, including random forest, XGBoost, and artificial neural networks, provided precise predictions for informed decision-making.

This newfound understanding of client behaviors and file reception trends empowers the organization to optimize resource allocation, enhance operational efficiency, and make strategic decisions based on data-driven insights.

- **Project : "AI-Driven Brewery Optimization: Preventing Beer Loss with Real-Time Insights".**

Domain : Brewery Industry / FMCG

Duration : June 2023 – Oct 2023

Description : Minimizing Beer Loss with Real-Time Data Insights. This data-driven project employs advanced analytics and real-time sensor data to develop an AI-powered alert system for proactive detection of potential beer loss during the production process. By leveraging AI algorithms, the brewery can swiftly respond to deviations in process parameters, optimizing brewing efficiency, and ensuring top-notch product quality while minimizing beer loss incidents.

- **Project : Revitalizing Insurance Customer Retention: A Data-Driven Solution for Predicting Churn and Enhancing Customer Satisfaction with Machine Learning.**

Domain : Insurance

Duration : Jan 2020 – Nov 2020

Description : An Advanced Data Analytics Framework for Enhancing Customer Retention and Satisfaction in the Insurance Industry. This project involves the development of a sophisticated machine learning model using anonymized insurance contract data. By analyzing key factors that lead to customer churn, we were able provide insights into areas where the client can improve its services and customer satisfaction levels.

Roles and Responsibilities

- Understand, analyze, and interpret large datasets
- Develop advanced programs to extract the data needed, prepare data for further analysis
- Discover, design, and develop analytical methods to support novel approaches of data and information processing
- Perform analysis to assess the quality of the data, determine the meaning of the data, and provide data facts and insights.

<u>Personal Details</u>	<u>Education Background</u>	<u>Soft Skill</u>
• DOB: 16/5/1992 • Languages: English, Hindi, Marathi • Hobbies: Chess • Marital Status: Unmarried	• B.Tech 2019 Rajasthan Technical University 69.05% • DIPLOMA 2013 MSBTE 58.61%	• Observation • Decision making • Communication • Multi-tasking • Coordination
