

SUMMARY

I am an ambitious software developer with 2 years of experience and a post-graduate in computer application. I've worked in high-end professional and technology environments, which has advanced my skills to expert levels in MySQL, Core Java, J2EE, SpringBoot, Microservices, HTML, CSS, JavaScript and React. My experience includes working in advanced professional environments, particularly as a Java developer.

TECHNICAL SKILLS

Back-end : Core Java, Adv. Java, SpringBoot, Hibernate and SQL.

Front-end : HTML, CSS, JavaScript and React.

Developer Tools: Git, STS, VS Code, Jenkins, Docker, MySQL workbench, Ubuntu, Putty and Postman.

WORK EXPERIENCE

Java Developer in Astrikainfotech

12/2023 – Present

I joined a dynamic startup as a Full Stack Java Developer, where I'm gaining experience in the entire software development lifecycle, including development, deployment, and testing. Developed strong skills in system design and database structuring, specializing in Java Spring Boot. Led successful project deployments across various testing environments. Committed to Agile methodologies, actively participating in daily Scrum meetings to drive collaboration and efficient task management.

Full Stack Java Developer in Revature

04/2022 – 11/2023

After completing a 3-month training program at Revature, I transitioned into the role of Full Stack Java Developer. Subsequently, I was onboarded to the project as a full stack java developer. I was part of two important projects: **Practice Management System** and **The News and Blogs Bulletin**. I helped manage these projects well. I thoroughly analyzed client requirements and translated them into actionable development plans. I implemented agile methodologies to ensure smooth frontend and backend development, utilizing technologies such as Spring Boot, Angular, React, Jenkins, Docker, and AWS for efficient integration and deployment.

PROJECTS

Loan Originating System (LOS)

12/2023 – Present

- Developed the backend in Java and deployed it on Jenkins and AWS.
- Implemented functionality in the Loan Originating System (LOS) to verify candidate information related to student education loans sourced from the **Sales portal**.
- Worked on APIs, SQL-script files, document-letter generation, testing, bug fixes, and deployment.
- Utilized agile methodology for the development of this product.

Practice Management System (PMS)

07/2023 – 11/2023

- Development of APIs as per functionality required by client.
- It was develop using Springboot, MicroServices and Angular.
- Its provide a platform for the hospital to book appointments for patients, accept or reject appointments by the doctor, collect patient information by the nurse.
- Worked on both **frontend** as well as **backend** in this project.

CERTIFICATION

Certificate in JAVA from HackerRank.

EDUCATION

MANU University Hyderabad

08/2022

Master of Computer Application (MCA)
