PROFESSIONAL SUMMARY:

- Having 4.3 years of experience in Information Technology (IT).
- Having 3.5 Years of experience as soc analyst (Security Operation Centre).
- Experience in Cyber Security on analyse threats and discover vulnerabilities, track remediation, develop reports.
- Hands on experience on performing Incident response, Malware analysis.
- Perform security assessments on networks, computer systems, and web-based applications as part of a Secure Development Life Cycle.
- Develops customized dashboards for operations, security, and management teams.
- Good hands-on experience in log and monitoring management systems, security event monitoring network-based and host-based intrusion detection systems, firewall technologies, malware detection and enterprise-level.
- Provide daily summary reports of network events and activity relevant to cyber defence practices.
- Provide timely detection, identification, and alerting of possible attacks/intrusions, anomalous activities, and misuse activities and distinguish these incidents and events from benign activities.
- Working understanding of OWASP Top 10 vulnerabilities.
- Moderate knowledge of networking fundamentals (TCP/IP, Network Layers, etc.)
- Experience in 24x7x365 security monitoring and incident response activities, on-call rotations, and shift rotations as need.
- Strong technical skills and the ability to work independently as well as in a team environment.
- Motivated self-starter with strong written and verbal communications skills, and the ability to create complex technical reports on analytic findings.

Key Skills:

- **Software:** MS Office Suite (Word, PowerPoint, Excel)
- **Operating System:** Windows, Linux
- **SIEM Tool:** Arcsight, Splunk, Qradar
- **Networking:** Switches, Routers, OSI layers, TCP/IP model, Security Solutions, Malware
- **Phishing Email Analysis: Nessus**
- Create, Modify and Update Security Information Event Management (SIEM) Tools.
- Perform Cyber and Technical Threat Analyse.

Currently working with : Cognizant

From Dec 2020– Till Date

Role: Security Analyst

Roles and Responsibilities:

- Monitoring 24x7 for P1, P2, P3 alerts in SOC operations for real-time monitoring, analyzing logs from various security/Industrial appliances by using Splunk, QRadar.
- Filling the Daily health checklist. Create, Modify and Update Security Information Event Management (SIEM) Tools.
- Working in GSOC (Global Security Operation Centre) with multiple clients.
- Creation of metrics and support KPIs, Dashboard, Trackers and Analyzing daily, weekly and monthly reports on DLP incident metrics update and close.
- Escalation of incidents that are determined to meet a threshold for greater investigation and review the DLP logs and close.
- Monitoring the DLP and Email and web logs and NIS Malware, Spam mails & Investigate and escalating to the L2 and closing the incidents.
- Carrying out log monitoring and incident analysis for various devices such as Firewalls, IDS, IPS, database, web servers and so forth.
- Good understanding of ITIL processes, including Change Management, Incident Management and Problem Management Preferred
- Report query adjustments, and various other SIEM configuration activities
- **IDS/IPS:** Monitored events, Log Analysis, verifying SNORT rule in packet analysis, responded to incidents, reported findings. Blacklisting/Whitelisting of IP's.
- **EPP:** Checking the Computer status and risk logs for client on regular basis.
- **DDOS Mitigation:** Monitor the Network level traffic, profiling over the network traffic and establishing base value and threshold values. Blacklisting/whitelisting of IP's at network level.
- Initiating cloud mitigation estimating impact of DDOS
- Interacting with Clients, Security Experts and concerned team to mitigate threats.
- Processing and Escalating SIEM Alerts and follow up until closure
- Spam/phishing Mails processing and actions with respective service till the containment.
- AV – Malware deletion Failed: Tracking down infected device and removal of virus through manual scanning and within the manager.
- . Source Fire/ MacAfee NSM IPS alerts Monitoring – Investigate the source of alert and remediate the infection
- Palo Alto Threat Monitoring – Malicious DNS traffic Alerts. Take Action to block in all security devices and track down the infected system to remediate.
- Perform Advanced Threat Investigation source from SOC monitoring. Take action to block in all security devices and track down the infected system to remediate.
- Using analysis tools to continuously monitor and analyse real time logs for any suspicious event
- Monitoring organization's network for security breaches and investigating violation.
- Work as part of a growing team, to disseminate information to others – which makes us continually improve.
- Perform real-time monitoring, security incident handling, analysis and escalations of security events from multiple log sources

Worked as System Admin from (Nov 2019 – Nov 2020).

Roles and Responsibilities:

- Monitoring and analysing server performance, Enabling Performance for analysis
- Managing the internal and external certification and licenses expire related issues.
- Tracking mails for various issues and reports as per management need.
- Understanding internal, external mail flow and Troubleshooting Mail routing issues.
- Upgradation of Exchange services packs & Rollups versions.
- Managing the Logs and Databases Mount status as per the requirement.
- Troubleshooting on Outlook issues like calendar issues, deleted emails issues and restoration of deleted emails, Rules issues, Offline address book issues, outlook Mail sync issues, outlook offline issues, delegation access issues...etc.
- Coordinated with technical teams for administration and support services of Active Directory and DNS replications.
- Worked in Exchange Admin Centre.

EDUCATIONAL QUALIFICATION:

- Degree In B.Com (Andhra University) in 2014.
- Post Graduation Completed in 2016(Andhra University)

Declaration:

I hereby declare that the information furnished above is true to the best of my Knowledge.
