Phone: 9561131003

Profile Summary

- Well Knowledge of Python, Statistics, SQL, OOPs, Flask and Machine Learning Algorithms, looking to fill a position in which my experience can be an asset to the company. I am a strong team leader, goal oriented and committed to the successful outcome of the project. Experienced in Data Science roles across industries.
- I am looking for a role where I can leverage my skills and experience for the betterment of the Organisation and further improvement to my own learning.
- Knowledge of industry best practices and a deep understanding on how data is extracted, transformed, scrubbed and loaded in Data storage environments.
- Ability to communicate analytical results in a way that is meaningful for business stakeholders and provide actionable insights.
- Reviewed and edited requirements, specifications, business processes and recommendations related to the proposed solution.
- An effective communicator with the capabilities to relate to people at any level of business & management.

Skills

- **Skills:** Sql, Data analytics, Python, Machine Learning, OOPs, SQL, Flask, Power BI, EDA, Docker, GitHub, Exception handling, packages and modules, AWS, Deep Learning, API, NLP, Time series, Django, Django restframework, DBT, Snowflake, ETL, Power BI.
- **Python Library:** NumPy, Pandas, Matplotlib, BeautifulSoup, Selenium, Seaborn..
- **Data base:** MongoDB, MySQL, SQL.
- **IDE:** PyCharm, Jupyter Notebook, Visual Studio Code.
- **Machine Learning Skills:**
 - Linear Regression Model
 - Logistic Regression Model
 - K – Nearest Neighbor
 - K – Means Clustering
 - Support Vector Machine
 - Decision Tree, Random Forest
 - Ridge & Lasso Regression
 - Elastic net Regression
 - Adaboost
 - Xgboost
 - Gradientboost
 - DBSCAN
 - Hierarchical mean Clustering

Education

- Akkamahadevi Women's University **Vijaypur**
MSC in computer science with 73%
- Rani Channama University **Belagavi**
BSC with 80%
- Department of Pre University Education **Karnataka**
PUC 2nd year with 58%
- Karnataka Secondary Education Examination Board
SSLC With 72%

Certifications

- Training and Certification from iNeuron, Bangalore in **Full stack Data Science**.
- computer algorithms and Data computing, Interpretation Skills.
- Ghantheya Baduku.

Working Experience

- Company name : Cognizant Technology Solutions India Pvt Ltd .
Designation: - Software Developer .
(From Nov 2023 to Feb 2024)
- Company name: Ambi Health Systems Pvt Ltd.
Designation: - Software Developer .
(From March 2023 to Sept 2023)
- Company name: Source Code technology Pvt.Ltd
Designation: - Data Engineer
(From June 2020 to March 2023)
- Company name: Sbit Services Pune.
Designation: - Technical
Assistant Back end Developer.
(From April 2019 to Sept 2019)
- College name: Banjara Arts Science and Commerce college Vijayapur
Designation: - Computer application lecturer.
(From Jun 2018 to Nov 2018)

Projects

1. Project name : Automatized Medical Chatbot

Description: An automatized medical chatbot is a system with human interaction using natural language diagnosis to provide medical aid. The vast amount of information that is available on the internet allows chatbots to provide accurate and systematic statistics based on the user's demand and requisite. We built a diagnosis bot that engages patients and explains their state using natural language.

Technologies used : Python Libraries(Pandas,Numpy),EDA,API's,Postman,Docker,AWS

Responsibilities:

- Data Analysis and Manipulation using Pandas and NumPy:
- Spearheaded data preprocessing and cleaning tasks for diverse datasets, ensuring data quality and integrity.
- Feature Engineering and Transformation:
- Engineered new features using Pandas to capture nuanced patterns, enhancing the predictive capabilities of machine learning models.
- Wrote structured, clean, reusable, and testable code using Python.
- Created backend components, APIs (Application Programming Interfaces), and database integration to support frontend functionalities.
- Leveraged skills in Software Development Lifecycle including requirements analysis, design, development, testing, deployment, and maintenance; engaged in code reviews, debugging, and troubleshooting to ensure the quality and performance of the software applications.
- Integrated user-facing components built by front-end developers with the logic of the backend.
- Tested own code and peer-review output from fellow developers.
- Dockerizing the application.
- Deploying in AWS Cloud.

2. Project name - Machine learning Project on Credit Card Defaulters

Description: Build such a model which identifies whether the customer is going to default for the credit card payment or not. Backend of the application is python. The module developed on Jupyter Notebook with Python kernel brought down the time of data. Here Pandas, Numpy, Matplotlib, Machine Learning, EDA, feature engineering technologies are stacked. Here I am responsible for data supervising the data cleansing, validation, data classification and data modelling activities. To develop algorithms in Python like KNN, K-means, linear regression and SVM as part of data analysis. [github]

Technologies used: ML algorithm, Matplotlib, Python, MySQL, sklearn libraries.

Responsibilities:

- Requirement discussions with the clients and also coordinating with Operations team to understand the manual work around done by the team.
- Review the estimates for work items, help the team with impact analysis and participate in estimation justification meetings with the clients.
- Identifying the points from where we need to get data sources and data consolidation process

- Involved in Data Pre-processing Techniques such as data cleaning, visualizing the data, identifying outliers and making data ready for Machine Learning Techniques.
- Machine Learning Algorithms Evaluation.
- Doing ETL with pentaho, spoon, pgadmin and for data warehouse snowflake.
- Analyze the results of all algorithm outcomes and deciding the best one.
- Model Deployment process once signoff is in place.

3. Project name- Images Scraper

Description: Scrapping of a particular images from the website. the technologies used here are pandas, matplotlib, seaborn, flask. the backend of project is python.

Technologies used- python, beautiful soap, selenium, api, mysql

4. Project name- Machine learning project that detects future fires based on certain Weather report:

Description : Using Data Science and Machine learning, we can build a model that takes in the detected fires dataset learns and detects future fires based on certain Weather report. Storing the Sourced dataset to MongoDB. Building a Flask App hosted on Heroku.

Technologies used: ML algorithm, matplotlib, python, mysql, sklearn libraries.

Responsibilities:

- Review the estimates for work items, help the team with impact analysis and participate in estimation justification meetings with the clients.
- Involved in Data Pre-processing Techniques such as data cleaning, visualizing the data, identifying outliers and making data ready for Machine Learning Techniques.
- Model performance evaluation and presentation to the business users.

Personal Details

Date of Birth	:	21/April/1996
Gender	:	Female
Marital Status	:	Married
Languages Known	:	English, Hindi, Marathi, kannada
Address	:	Third floor, Flat.no.18, Arun bag Narhe, Pune Pin -411041

Declaration

I hereby declare that the above-mentioned information is correct up to my knowledge and I will solely be responsible for any discrepancy found in them
