

PRAMILA DALE

PUNE, Maharashtra / pramiladale92@gmail.com / +918275815830

Summary

Highly qualified Software Test Engineer with over 3+ years' experience in software industry, solution-oriented and hand-on technical utility player, centered in software testing. Experience lies in Automation Testing, Manual Testing, Functional Testing, Database Testing, and ETL-BI Testing.

Experience

Ericsson India Pvt Ltd (June- 2020 – Till date)

Software Test Engineer, PUNE,
Maharashtra

- I am having detail oriented professional experience with an 3+ years in Software testing along with Backend Testing – Database validation, ETL Testing, BI testing in Decision Support System (DSS).
- Experience in automation testing, software development, DevOps, or a combination of these roles.
- Experience with automated testing tools and frameworks, Web technologies
- Programming skills in Python and GUI Automation.
- Experience in planning test cases to ensure full test coverage.
- Ability to improve testing processes and techniques on existing system.
- Strong experience in designing and automation framework using Test Automation Tools like (Selenium & Pytest).
- Strong Experience in Programming, Selenium WebDriver.
- Experience in API Testing (both manual and automation).
- Extensive exposure to Back-end/ETL testing with high-level of SQL skills is required.
- Good experience in OOPS concepts.
- Strong automation skills using Python, API's Testing etc.
- Experience with various domains such as Oracle, CRM and OMS -Telecom billing .
- Also having Knowledge of software testing that includes Impact assessment, requirement analysis, test scenarios and test case design, test case execution, system testing , system integration testing .
- Strong grip on UNIX commands.
- Understand the SRS and Mapping document sheet.
- Have written Test cases for ETL to compare Source and Target data.
- Experience in ETL process consisting of Sourcing, Mapping.
- Good knowledge on fact and dimension tables. Prepared and run SQL queries to verify Dimension and Fact table.
- Performed Source to staging testing in terms of Data completeness, Data Uniqueness, Data Validity, Data Integrity, Data Transformation, and Data Quality.

- Strong Knowledge on SQL Queries.
- Involved in review of test case and share review comments with team members.
- Report the defect via HPALM defect management tool to development team.
- Actively involved in Database testing. Checked the data for insertion, updation and deletion operation.
- Design various types of report like daily status report, weekly status report and Business Impact report and share with top management.
- Participate in walkthrough session during review of test scenario with customer and modify changes and circulate the MOM with other team member.

Skills

• Sound knowledge of Telecom and Payment domain, • Black Box Testing, • Telecom CRM and Billing, • ETL-BI Testing, • Test Scenario Identification, • Informatica/SSIS ETL Tool, • Jira-Project Management tool, • HPALM tool., Report Testing, Postman Tool, • Strong in ETL-BI and Data Warehousing concepts, • IME Mediation system , • Expert in SQL and Database Testing, • Functional and Non-Functional Testing, • Test Case Writing and Execution, • Microsoft Azure /Oracle Database, • Automation Testing, • Python Selenium Web Driver, Pycharm, Pytest, • Jenkins, JMeter, • Agile/Water Fall, • Unix, • Quickly learned new skills and applied them to daily tasks, improving efficiency and productivity

Education

Bachelors of Engineering
Mechanical Engineering

Languages

English, Hindi, Marathi

PROJECTS

Title-CCPM

Client-AT&T

Description-

Call Centre performance management:- Main objective of this project is to maintain the AT&T agents hierarchy data and there commission distribution based on their sales performance

This was an implementation of near real time data warehouse on sales related data.

Continuous data replication into DWH via golden gate from OMS and CRM systems for U-verse, Wireless, Wireline & DTV services.

It helps customer to view reports related to sales happened with analytic capability

Roles and Responsibilities-

- Design and Develop Test strategy, Test plan, Test reporting, test conditions, test scripts, test data, and expected results for test streams, including Product Test, Integration Test, Technical Test and Deployment Test.
- Develop automated/manual Test scenarios to test High Level and Low Level Software requirements

- Estimate Testing efforts.
- Develop test cases and test procedure for High Level and Low Level Software requirements
- Develop Software integration test Scripts to verify the correct implementation of High Level requirements
- Establish traceability from SW Requirement and Test.
- Perform peer review on test cases, test procedure.
- Writing Complex SQL to validate the requirements.
- Performing end to end validation.
- Analyzing requirements and participating in design review calls.
- Creating Test Strategy.
- Preparation and maintenance of Test Plans.
- Stakeholder communication including sign-off on test activities and deliverable.
- Manage the creation and maintenance of test scenarios and scripts.
- Creating Environment to run the Test Cases.
- Executing schedule to test the dependencies.
- Preparation and maintenance of the run and Execution Plan.
- Participation in defect management meeting and progressing resolution.
- Creating daily and weekly status/defect Report.

Title- ETE Flow through (US) TDAS Payment And EDW

Client–AT&T

Description-

AT&T is one of the leading wire line and wireless service provider in North America, AT&T Light speed project - U-verse includes fiber optic technology and computer networking to bring digital TV, high-speed Internet, and digital home phone service together as a fully integrated experience.

This project involves complete End-To-End functional testing of Telecom OMS/CRM Billing, Payment & EDW applications. Application designed to meet the business requirements for AT&T ETE Flow through and TDAS.

Roles and Responsibilities-

- Handled Test Plan/Detailed Test case creation.
- Worked for Data Creation via Automation tool and saving it to a repository for all to use.
- Working with broadband network management system to assign the DSLAM and Port to different regions for AT&T.
- Working on the data cleanup's part to make it available for next releases to reduce the redundant work.
- Done target database validation, perform ETL testing for quality, quantity and format of data.
- Worked as main point of contact from the Team and training new joiners.
- Working closely with defect management team to resolve the defect on priority.
- Working on different GUI like CRM, OMS, WEB Portal, OPUS, PDC to complete the Wireless and wire line flow and DIRECTV flow.

- Handling Daily status call with client to update them about the progress.

Title- TDATA

Client- AT&T

Description-

AT&T. Data Analytics for Targeted Applications -

T.DATA matches AT&T products & services to the consumer by constructing information using AT&T's consumer data by detecting and recording behavioral patterns within its consumer systemic memory profile and enabling experiences to design actions for those anticipated behaviors and offering customized services and products to targeted customer

T.DATA constructs information using AT&T's existing consumer data and recognize consumer's expectation that AT&T already knows. TDATA detects and records behavioral patterns within it's

Consumer systemic memory profile enabling AT&T experiences

To design actions for those anticipated behaviors

Roles and Responsibilities-

- Responsible for test execution and generation / maintenance of all records pertinent to testing.
 - Collaborate with developers and QA leads to improve testability, automation, and tools
 - Preparing automation scripts
 - Execute automated test during sprint and release cycles
 - Troubleshooting automation software issues
 - Creating automation test plans and cases
 - Preparing detailed automation test reports
 - Reviewing technical specifications and design documents
 - Responsible for applications systems analysis , testing and programming for QA automation
 - Writing Complex SQL to validate the requirements.
 - Performing end to end validation.
 - Analyzing requirements and participating in design review calls.
 - Creating Test Strategy.
 - Preparation and maintenance of Test Plans.
 - Stakeholder communication including sign-off on test activities and deliverable.
 - Manage the creation and maintenance of test scenarios and scripts.
 - Creating Environment to run the Test Cases.
 - Executing schedule to test the dependencies.
 - Preparation and maintenance of the run and Execution Plan.
 - Participation in defect management meeting and progressing resolution.
 - Creating daily and weekly status/defect Report.
 - .
