ABOUT ME

I am a versatile and experienced DevOps Engineer with a strong proficiency in time management. I excel as a communicator, possessing proven interpersonal skills, and am adept at collaborative teamwork. I also proactively take initiative when the situation demands it. My problem-solving acumen is finely tuned and I maintain an unwavering enthusiasm for learning and eagerly embrace new challenges.

WORK EXPERIENCE

Assistant System Engineer (Devops)

Tata Consultancy Services - Chennai (July 2022 - Present)

- 1 year of professional experience in DevOps tools with a strong focus on AWS cloud services.
- Handling L1 and L2 level issues, participating in client calls, and resolving tickets to meet SLAs.
- Setting up and managing Git repositories, implementing Git and GitHub branching, Merging strategies, and fostering code collaboration within distributed teams.
- Implemented and maintained Jenkins pipelines to automate build, test, and deployment processes, thereby establishing a comprehensive (CI/CD) workflow.
- Creating and managing multiple Docker files, images, and containers using the Docker containerization tool.
- Implemented and managed high-availability Kubernetes clusters, ensuring seamless deployment of microservices to Kubernetes clusters with zero downtime.
- Utilizing Terraform to orchestrate the deployment and administration of cloud resources through Infrastructure as Code (IaC) practices.
- Configuring and managing various AWS services based on business needs such as EC2, S3, VPC, IAM, SNS, CloudWatch, Cloudfront, Route53, EBS, RDS, ELB and Auto Scaling.
- Creating complex IAM policies, roles, and user management to control access within AWS.

- **Setting up and managing security groups and VPC to ensure a secure environment.**
- **Creating and overseeing S3 buckets, configuring ACLs, managing connections between diverse zones, and effectively blocking suspicious IP/subnets.**
- **Creating alarms and notifications for EC2 instances using CloudWatch.**
- **Creating and managing AMLs, snapshots, volumes, and upgrading/downgrading AWS resources.**

TECHNICAL STRENGTH

- **Devops Tools: Git, Jenkins, Docker, kubernetes, Terraform, Ansible.**
- **AWS Services: Ec2, VPC, SNS, SQS, Elastic load balancer, Elastic Ip.**
- **Scripting: Shell Scripting**
- **Monitoring / Logging tools : Cloud Watch , Cloud Trail.**
- **Security tools: IAM, AWS Security Hub, Amazon Guard Duty ,Amazon Inspector, AWS Web Application Firewall (WAF)**
- **Storage tools : S3 , Elastic Block Storage(EBS), Elastic File System (EFS).**
- **Database tools: Relational Database Service , Mysql.**
- **Operating System: Linux, Ubuntu, Windows**
- **Deployment Servers: Apache, Tomcat**
- **Atlassian tools: JIRA, Service now**

DECLARATION

I hereby declare that the above-furnished details are true and correct to the best of my knowledge.
