

PAVANI ATLA

ANALYST - DATA SCIENCE & ANALYTICS

+91 9790744424

pavaniatla20gmail.com

<https://www.linkedin.com/in/pavaniatla20/>

Hyderabad, Telangana

PROFILE

Passionate about extracting insights from complex datasets over 3 years of experience. Proficient in Python, Data Science, Strong in statistical analysis, machine learning, and data visualization. Committed to driving data-driven decisions. Proficient in programming and problem-solving. Aiming to improve business performance through data science

KEY COMPETENCIES

- **Languages & DB:** Python, R language ,SQL
 - **Analysis & Visualization:** Pandas, NumPy, Seaborn, Elastic search, Matplotlib, openAI, dotenv, Excel
 - **APIs & Version Control:** Flask, Streamlit, Git, Github
 - **Tools and IDEs :** GitLab, PyCharm, Jupyter
 - **Cloud Computing:** AWS EC2, S3 Bucket, AWS lambda, Azure logic app, Azure function apps
 - **Machine learning :** NLP, Web Scraping
-

PROFESSIONAL EXPERIENCE

Chat with Snowflake Data Retrieval

Analyst

Project Description:

Led the development of a dynamic Streamlit-based application designed for seamless file selection and Snowflake data retrieval. Integrated cutting-edge technologies to enhance user interaction and streamline data exploration

- Led development of a Streamlit app for file selection and Snowflake data retrieval. Integrated Streamlit, Snowflake Connector, Pandas, OpenAI GPT-3.5, and dotenv. Designed an intuitive Streamlit UI with dropdowns for table selection and real-time display.
- Established Snowflake connections and executed SQL queries for efficient data retrieval.. Managed SQL query execution using Pandas DataFrames for seamless data manipulation.
- Successfully led the development of a Streamlit-based application, contributing to improved data exploration and user interaction.
- Enhanced the project by integrating OpenAI GPT-3.5 for dynamic prompt generation, leading to more engaging user experiences.
- Implemented robust error handling mechanisms and ensured data security, contributing to the reliability of the application.

Intelligent Web Scraping and NLP-Based Data Extraction

Python Developer

Project Description:

Developed an intelligent system capable of a web scraping system for extracting data from websites and attachments.

Implemented Elastic Search for robust storage and retrieval of collected data .Applied advanced NLP techniques to identify and extract similar entities for insightful analysis. Enabled valuable insights generation for informed decision-making.

- Designed and implemented a robust web scraping system for diverse data extraction, incorporating Elastic Search for efficient data storage and real-time indexing.
 - Integrated cutting-edge NLP techniques, including advanced entity recognition and textual analysis, to extract meaningful insights from various data structures and attachment types.
 - Demonstrated adaptability by handling diverse file formats (PDFs, documents, images) and proficiently utilizing NLP methodologies like Named Entity Recognition (NER).
 - Applied semantic similarity analysis algorithms to unveil nuanced connections between entities, enhancing the depth of data analysis.
 - Identified duplicates and established associations within the collected data through meticulous analysis and pattern recognition techniques.
-

Project: Supply Chain @ Python Developer

Roles and Responsibilities:

- Developed Python code to identify and handle duplicate orders. Sent email notifications with original email attachments when duplicate orders were detected. Utilized Azure Blob storage to store the extracted and processed data.
- Served as a lead, providing technical support to both the Canadian and US Managed Service teams for email processing. Conducted rigorous unit testing for every development update and change.
- Monitored the entire process, promptly addressing and resolving technical issues. Validated data records to ensure proper formatting during extraction.
- Ensured the tool sent technical email alerts for duplicate orders, irrelevant orders, exceptions, and sales orders.
- Managed service orders in alignment with the US and Canada business Run Book. Implemented and monitored a data pipeline using Azure Logic Apps.

Project: Health Care @ Python Developer

Project Description:

To transform data from database, Excel files, and CSV files, into a consistent format and generate a report using python libraries matplotlib and seaborn .

- Gather data from multiple sources, including a database, Excel files, and CSV files. Implement a data transformation algorithm using pandas to clean and standardize the data Develop an algorithm to merge data from multiple sources into a single dataset.
- Implement a feature to allow users to specify the data sources and the merging criteria Develop an algorithm to generate a report using matplotlib and seaborn to visualize and analyze the data.
- Develop an automated email system to send the report to a specified email address. Implement a feature to allow users to customize the report's content and format.
- Integrate the system with a database to store and retrieve data and reports. Test the data transformation and report generation functions to ensure they are functioning correctly and accurately transforming and reporting the data.
- Provide documentation and training materials to facilitate the use of the data transformation system and API by users

EXPERIENCE

Company - Mouri Tech

- Analyst April 2023 - Till Now
- Associate Software Engineer Feb2022 -Mar2023
- Associate Trainee July 2021-jan 2022

EDUCATION

Bachelor Of Engineering

- Saveetha Engineering College 2016-2020
- Specialization In Electronics & Communication Engineering

AWARDS

- Received Certificate of Appreciation through out the year for innovation and effect client delivery.
- Nominated as GEM Award for Development delivery excellence.
- Nominated as EMPLOYEE OF THE YEAR Development delivery excellence.
