About Me

Dedicated Software Tester with Expertise in Manual and Automation Testing, Selenium, Cucumber, Agile, Scrum, and TestNG | Strong Management and Communication Skills.

Profile Summary

As a highly motivated and dedicated software tester, I have a strong foundation in manual and automation testing, including Selenium for system integration and regression testing. I have worked on an insurance company project as a QA, proficient in requirement analysis, test case development, and execution. I have excellent communication skills, collaborating effectively with cross-functional teams and accurately describing bugs. My experience includes functional testing, regression testing, system integration, smoke testing, and black box testing. I am committed to staying updated with new and emerging trends in the testing industry and seeking a challenging role in a dynamic organization to utilize my technical skills and management abilities for the growth of the company.

Work Experience

2022 - 2023

Quality Assurance Tester

Atos Syntel

Key Result Area

During my tenure as a Software Tester in the insurance domain, I was responsible for executing test cases, generating and verifying XML files, and coordinating the transfer of XML data to the Fuse team. Additionally, I dedicated time each day to self-improvement through e-learning, gaining basic knowledge in various technologies such as microservices, cloud computing (specifically Azure platforms), Selenium, Cucumber, Postman, HTML, CSS, JavaScript, XML, ALM tools, and Core Java. My proactive approach to continuous learning allowed me to enhance my skills beyond the scope of my project, contributing to my effectiveness in the insurance domain.

Projects

396 Days

Insurance domain

QA tester - Insurance company (Aegon)

- Diligently executed various test scenarios to ensure software quality and functionality met required standards.
- Collaborated closely with cross-functional teams, ensuring accurate test coverage and timely defect management using ALM, an efficient application lifecycle management tool.
- Actively participated in regression testing following SCM updates, identifying and addressing potential issues arising from software changes.
- Conducted XML validation and verification to ensure data integrity and adherence to industry standards.
- Contributed to test planning and documentation within an Agile development environment, adapting to changing project requirements.
- Employed SQL queries to validate the accuracy and correctness of PDF letters generated for customers, ensuring error-free and reliable communications.
