

Prajwal S K
Senior Cloud DevOps Engineer
Prajwalsk999@gmail.com
Contact: **+91-9606708205**

Skill Summary:

To be able to work as DevOps Engineer look forward to meet the organization goals that can greatly use my potentiality in the Software Configuration Management, Build and release, Integration, automation, deployments, delivery of release management.

Professional Experience:

- I'm Having 5.2 Years of experience as a **DevOps Engineer** & good hands-on with **Software Development Life Cycle (SDLC) processes**, like **Infra-provision, Configuration, build & deploying the Web Based & Enterprise Application**.
- Good professional experienced in **Linux, Git, GitHub, Bit bucket, maven, Go, Gradle, SonarQube, Jfrog, Apache tomcat, Jenkins, Docker, Kubernetes, Ansible and AWS cloud infrastructure**.
- Experienced in SCM Tools GIT, GitHub and bit bucket to maintain Branching, Tagging, and Merging Concepts in with Distributed version control systems.
- Experienced to Build our source code using maven and ant build tools for CI
- Have configured required tools for our CI/CD in manual and automated process
- Experienced to create different types jobs like free style, maven project and pipeline
- Have created **master slave architecture** in Jenkins using ssh protocols for distributing the builds to nodes.
- Good hands-on experience to work with Linux based operating systems
- Experienced to write **Docker file** to create **docker images** and run it as **docker containers deployments**. Also created **Docker-volumes** for taking container data backup, also worked on **Docker-compose** to running multi-container applications.
- Experienced to write custom **Docker file** for containerization the applications to deploy in Kubernetes Cluster.
- Good hands-on experience to configure **Kubernetes orchestration** deployments for **Highly Available Cluster & Auto-Scaling** groups. Also experienced to configure Kubernetes Cluster setup with **KOPS** and also **EKS** using **AWS services**.
- Good hands-on experience to work with **Helm Package manager** to deploy Kubernetes applications.
- Good hands-on experience to setup and integrate **Prometheus** with **Grafana monitoring** for application servers.
- Experienced in configuration management tool like **Ansible** to configure required configurations in different remote instances using ssh protocols.
- Have configured Elastic Cache (Redis) cluster for diff environments for high availability.
- Created **Ansible-vault** for **encrypting** the data in security format, and also worked on **Ansible-roles** to diffenenceate to find the complex problems in **playbooks**.

- Hands on experience to create **Amazon Machine Images** (AMI's) using Packer. And also worked on different services like EC2, EBS, EFS, S3, ELB, Cloud Formation, Auto scaling, IAM and VPC.
- Ability to work within a Team with **strong analytical, problem-solving and communication skills**. Flexible and adaptable, work in ambiguous situations.
- Performed continuous Build and Deployments to **Dev, Stage or QA and Prod** environments. Working with cross functional, geographically distributed team to provide **24/7** deployment support across multiple environments.

Educational Qualification:

- Diploma and BCA from Oxford collage-,2019.

Professional Experience:

- Working in Accenture, Bangalore as Specialist DevOps Engineer from July 2019 to till now.

SPECIALITIES:

Operating Systems	:	Linux
Infra Provision	:	Cloud Formation
CI/CD Tool	:	Jenkins, Bamboo, GIT LAB.
Containerization	:	Docker
Orchestration	:	Kubernetes
Database	:	PostgreSQL
Configuration Tool	:	Ansible
Tracking Tool	:	JIRA
Cloud	:	AWS
Build Tools	:	Maven
Version Control	:	Git, GitHub
Scripting Languages	:	Shell, YAML & Groovy
Web & Application server	:	Tomcat, Nginx & httpd
Code analysis tools	:	SonarQube
Artifactory Repository	:	Jfrog, Nexus
Monitoring Tool	:	Prometheus & Grafana ELK

Project#4: Metric Platform**Client: Ericsson****Role: Specialist DevOps Engineer****Description:**

Capital markets and investment banking activities and securities services in the United States are offered through SG Americas Securities. It has provided the financing needed for the world to transition from one development model to another. Ericsson is a sustainable bank with a proven stability on which customers can depend.

Responsibilities:

- Coordinate between key team members, including developers, QA, and support to promote, schedule, and perform deployments in various environments according to development timelines.
- Administer and manage all the SCM tools like GIT and Build environments including source management tools and build machines.
- Created Master-Slave architecture using SSH Protocols, to distribute the builds. Configured required different plug-ins in Jenkins.
- Good experience to create resources from Amazon web services like EC2, ELASTIC LOAD BALANCING, AUTOSCALING, EBS, VPC, Cloud watch, Lambda, S3 and etc.
- Hands-on experience in configuring and troubleshooting Jenkins, Create Job schedule builds as per the project needs.
- Having experience in creating custom Docker Images and Docker containers using Docker file for multi-container deployments.
- Experienced to create custom Docker Images and Docker containers using Docker file. And good to work with Docker Networking
- Deploying Kubernetes to AWS using KOPS and EKS as for the project, Created services for the deployment in Kubernetes.
- Experienced to setup Prometheus & Grafana monitoring for k8s cluster to monitor application endpoint metrics. Maven to Create Build artifacts and other build automation tasks.
- Accelerate application delivery with great Productivity, Reliability, Security, and Control using the Tomcat Application Server.
- Automate release processes, deployment, build to eliminate manual work, and human error using scripts.
- Automating the infrastructure as a code using ANSIBLE. Developed and Maintained playbooks for Configuration Management using ANSIBLE.

Project#3: Saudi Telecom

Client: Virtusa

Role: DevOps Engineer

Project Description:

Saudi Telecom Company, (stylized as stc) is a Saudi Arabia-based digital company that offers telecommunications services, landline, mobile, Internet services, enterprise digital solutions, entertainment, fintech, and computer networks. The Saudi Telecom Company expanded beyond the borders of the host country and that the acquisition of 25% of the Axis Group - Malaysia and it is working in the field of telecommunications value of \$3.04 billion.

Responsibilities:

- Experienced in all SCM activities like Branching, Tagging, and Backup/Restore to Managing SCM tools GitHub including installation, configuration, and maintenance.
- Coordinate between key team members, including developers, QA, and support to promote, schedule, and perform deployments in various environments according to development timelines.
- Configured and worked on maven build tool for packaging for our source code
- Handling all phases of Build activities daily builds using continuous integration Jenkins, Debugging compilation, and runtime issues in build failures.
- Configured Jenkins master slave cluster using SSH protocols in AWS infra
- Configured Jfrog integration for storing the artifacts and dependencies with Jenkins to build and deploy.
- Performed continuous Build and Deployments to Dev, Stage or QA and Prod environments. Experienced to configure various tools with Jenkins as per project.
- Responsible for Installation, Configuration, Access Control, Configuration jobs in Jenkins to implement Nightly Builds and Milestone Builds using Jenkins, Automated whole Build, and release for java web application using Jenkins.
- Worked on different services to setup infrastructure with security guidelines as per company norms, services are ec2, VPC, S3, ELB, cloud formation, cloud trail, IAM, EBS, Elastic Cache, Lambda, Auto scaling etc.
- Worked in 24/7 rotational shift timings as per project needs.

Project#2: Lifeworx**Client: NYC****Role: DevOps Engineer****Description:**

Lifeworx is the premier child care, elder care, and nanny and chef service provider in New York. Lifeworx, a member of the BBB (Better Business Bureau). The main aim of Lifeworx is to enhance the overall quality of your life by creating a less stressful home environment and taking care of day-to-day tasks for you, so that you have more time to spend with the ones you love. Our job is to take up the slack for working couples, busy families, professionals and elders. It provided over 20,000 services to hundreds of satisfied clients throughout Westchester, Fairfield and NYC.

Responsibilities:

- Coordinate between key team members, including developers, QA, and support to promote, schedule, and perform deployments in various environments according to development timelines.
- Administer and manage all the SCM tools like GIT and Build environments including source management tools and build machines.
- Created Master-Slave architecture using SSH Protocols, to distribute the builds. Configured required different plug-ins in Jenkins.
- Hands-on experience in configuring and troubleshooting Jenkins, Create Job schedule builds as per the project needs.
- Having experience in creating custom Docker Images and Docker containers using Docker file for multi-container deployments.
- Experienced to create custom Docker Images and Docker containers using Dockerfile. And good to work with Docker Networking
- Deploying Kubernetes to AWS using KOPS and EKS as for the project, Created services for the deployment in Kubernetes.
- Experienced to setup Prometheus & Grafana monitoring for k8s cluster to monitor application endpoint metrics.
- Maven to Create Build artifacts and other build automation tasks.
- Accelerate application delivery with great Productivity, Reliability, Security, and Control using the Tomcat Application Server.
- Automate release processes, deployment, build to eliminate manual work, and human error using scripts.
- Responsible for Installation, Configuration, Access Control, Configuration jobs in Jenkins to implement Nightly Builds and Milestone Builds using Jenkins, Automated whole Build, and release for java web application using Jenkins.

Project#1: Wave PTT(Push To Talk)

Client: Motorola

Role: Software Analyst

Project Description:

Push-to-talk (PTT), also known as press-to-transmit, is a method of having conversations or talking on half-duplex communication lines, including two-way radio, using a momentary button to switch from voice reception mode to transmit mode. It is a service option for a cellular phone network that enables subscribers to use their phones as walkie-talkies with unlimited range. A typical push-to-talk connection connects almost instantly. A significant advantage of PTT is the ability for a single person to reach an active talk group with a single button press; users need not make several telephone calls to coordinate with a group.

Responsibilities:

- Experienced in all SCM activities like Branching, Tagging, and Backup/Restore to Managing SCM tools GIT and bit bucket including installation, configuration, and maintenance.
- Handling all phases of Build activities daily builds using continuous integration Jenkins, , Debugging compilation, and runtime issues in build failures.
- Notify broken builds to appropriate stakeholders and enable for successful build Copy the built package to appropriate team for testing.
- Created custom Docker Images and Docker containers using Docker for Kubernetes orchestration.
- Experienced to create custom Docker Images and Docker containers using Docker file. And good to work with Docker Networking
- Deploying Kubernetes to AWS using KOPS and as for the project, created services for the deployment in Kubernetes.
- Experienced to setup Prometheus & Grafana monitoring for k8s cluster to monitor application endpoint metrics.
- Developing and maintaining scripts to automate the build, packaging as well as automation of time-consuming, error-prone tasks associated with the build to creating and maintaining Continuous Build Process documentation.
- Collaborate with QA and Development managers on release schedules and content of builds, release, and patches Validate and test the release to ensure it is operating as the completeness of release notes and publish release package communication.

Configured jobs for scheduled Builds to DEV and stage environments and to perform automated deployments using Jenkins Installation of plug-ins on need basis in Jenkins
