

Pravalika Vudugu

AWS DEVOPS Engineer

Mobile: +91-8885451995

E-Mail: pravidevops06@gmail.com

OBJECTIVE:

Energetic, determined, team-oriented, and diligent professional with **2 years and 6 months** of experience in **AWS cloud services & DevOps and Linux administration** seeking an opportunity to utilize my skills in a professional capacity, employing comprehensive knowledge and vast professional experience.

PROFESSIONAL SUMMARY:

- Having a good knowledge of **AWS, Terraform, GIT, Docker, Jenkins, Maven, Kubernetes**.
- Expertise level knowledge of Amazon EC2, AmazonS3, Route53, Amazon RDS, Amazon Elastic Load Balancing, AutoScaling, Cloud Watch, Python and Terraform.
- Proficient in Administrating **AWS IaaS/PaaS** services like compute **Virtual Machines, Network Services, Monitoring, and Auto scaling etc.**
- Hands on Experience of Writing **Jenkins Pipelines** to deploy and update multiple resources in **AWS**.
- Backup the **EC2** instances and volumes by creating snapshots and saving them in S3 buckets for Disaster Recovery.
- Handling multiple requests in **IAM** like creating users, groups, and roles.
- S3—Working with **S3** to create the buckets to store objects
- Taking instance backups as Amazon Machine Image (**AMI**) and launching these when we need similar servers.
- Experienced in using **Jenkins** as a continuous integration tool to create new jobs, managing required plug-in, configuring the jobs, selecting required source code management tool, build trigger, build system, and post build actions, scheduled automatic builds, notifying the build report.
- Configured servers remotely using **ansible playbooks** to install packages, start services, copy files etc.
- Experience in ansible, automated deployment process by writing ansible playbooks Using different modules, loops, facts, vars, ad-hoc commands, vault.
- Configured servers remotely using ansible playbooks to install packages, start services, copy files etc.
- Experienced working on several **Docker components** like Docker Engine, Hub, Machine, creating Docker images, Compose, Docker Registry and handling multiple images primarily for installations and domain configurations.

- Experience on orchestration tool **Kubernetes** to provide a platform for automating deployment, scaling, and operations of application containers across clusters of hosts.
- Good Knowledge on **AWS Lambda, Boto3, SQS, EFS** and **Kubernetes**.

ACADAMIC PROFILE :

- Christu Jyothi Institution of Technology & Science, Jangaon in the year of 2019.

PROFESSIONAL EXPERIENCE :

- Worked as **AWS Devops Engineer in We-do-IT India PVT LTD** from October 2020- March 2023

TECHNICAL SKILLS :

Operating System	: Windows-2012,13,16 & Amazon Linux, SUSE Linux, Red Hat Linux 7.
Cloud Platform	: AWS
Devops	: Git, Maven, Nexus Jenkins, Docker, Ansible, Kubernetes.
Code Quality Tool	: Sonar Qube
Scripting Languages	: Shell script, Groovy & Python
Containerization Tool	: Docker, Kubernetes
Infrastructure Management	: Ansible, Terraform, Cloud formation

PROJECT DETAILS :

Project#1:

Name	: EBAY
Role	: AWS Devops Engineer
Environment	: Linux, GIT, MAVEN, Jenkins, Nexus, Tomcat

Roles & Responsibilities:

- Design, implement and maintain all AWS infrastructure and services within a managed service environment.
- Provide daily monitoring, management, trouble shooting and issue resolution to systems and services hosted on cloud resources.
- Implement process and quality improvements through task automation. Institute infrastructure as code, security automation and automation or routine maintenance tasks.
- Created snapshots to take backups of the volumes and images to store launch configurations of the EC2 instances.
- Installed/Configured and Managed Nexus Repository Manager and all the Repositories.
- Created various branches for each requirement and merged from development to release branch, created tags for releases using GIT.
- Deployed web applications into different application servers using Jenkins.
- Generated reports on different bugs & tickets using JIRA/ Bug tracking; created & solved blocked/unassigned tickets
- Automate the build process using Jenkins jobs. Monitoring daily builds using CI tool Jenkins verifying logs if build fails.

Project#2:

Name : Eureka Forbes

Role : AWS Devops Engineer

Environment : Linux, GIT, MAVEN, Jenkins ,Nexus, Tomcat

Roles & Responsibilities:

- Experience on configuring VPC, EC2, RDS, ELB, Route53, IAM Services
- Implemented Docker, Jenkins master and Jenkins slave module.
- Making the applications containerized using Docker files.
- Installed/Configured and Managed Nexus Repository Manager and all the Repositories.
- Created various branches for each requirement and merged from development to release branch, created tags for releases using GIT.
- Deploy and monitor scalable infrastructure on Amazon web services (AWS) configuration management.
- Creating multiple VPC's and public, private subnets as per requirement and distributed them as groups into various availability zones of the VPC.

- Created NAT gateways and instances to allow communication from the private instances to the internet through bastion hosts.
- Performing Patching activities on the Auto scaling group instances to take effect of patched AMI.
- Deployed web applications into different application servers using Jenkins.
