Projects

Project Name: Find Kaizen

Technology: Reactjs(Front End), Laravel (Admin + API), GraphQL (API)

URL: <https://findkaizen.mobilegiz.com/>

Description:

- We can create multiple products from the category and company wise.
- We need to allow product for the filter, search, listing from the admin side.
- We can add multiple filter (Range filter, Multi select, Single Select) Filter from the admin side and use in front side.

Project Name: Exchequer

Technology: Mobile App(Front End), Laravel (Admin + API)

Description:

- There is 3 user for this app. 1. Admin
- 2. Organization 3. Member
- Organization need to purchase the subscription for the join to the app
- After purchasing subscription organization can

add multiple

users, members, fees(plan), projects/event,
meetings

- The member can pay to the organization for the
dues, funds, donations

Project Name: Ichill

Technology: Mobile App(Front End), Laravel
(Admin + API)

Description:

- Users can create their playlists based on their preferences, mood, or occasions. Ichill also offers pre-made playlists curated by admin.
- The user can subscribe, create playlist, add songs to playlist
- Subscribers can download songs and listen to them offline without an internet connection, which is convenient for users on the go.

Project Name: Mineapp

Technology: Mobile App(Front End), Laravel
(Admin + API)

Description:

- Admins can manage different services offered on the platform.
- Admins can manage user and service providers accounts, profiles, and access permissions.
- Customers and Service Providers can create accounts, log in, and manage their profiles.
- Customers can explore available services, view descriptions, and select the ones they need.
- Once a service is chosen, customers can book appointments with service providers.
- After service completion, customers can leave reviews and ratings for the service received.

Project Name: Grapevine

Technology: Mobile App(Front End), Laravel
(Admin + API)

Description:

- Admin can create multiple missions and each mission has multiple milestone
 - Customers have access to a list or catalogue displaying available missions on the platform.

- Customer can access the mission based on their current location.
- Customers can view details about each mission, including its description, milestones, and associated rewards and join the mission.
- Customers receive real-time updates or notifications about nearby missions and their progress as they move within or near those designated locations.
- As customers accomplish each milestone within a mission, they receive rewards or incentives.
- Rewards could be in various forms like cash reward and reward points.

Project Name: Cstoremaster

Technology: Mobile App(Front End), Magento 2(Backend + API)

Description:

- Users have the ability to create various items, including multiple Customers, orders, RMAs (Return Merchandise Authorizations), invoices, purchase orders, automatic POs (Purchase Orders), and requests related to GEEK+ Robotics.
- The primary handling of orders is through robotics, while the backend manages and processes the order requests.
- Administrators also have the capability to manually create orders in the system.

Project Name: Smartverc

URL: <https://www.smartverc.com/>

Technology: Mobile App(Front End), Codeigniter(Backend + API + Frontend),

Description:

- The application is primarily designed for stock market-related purposes.
- Admins have the ability to create multiple subscription plans categorized as fixed portfolio and custom portfolio options.
- Customers can purchase these plans and

receive weekly advice for managing their portfolios.

- The stock market data is updated at intervals of every 15 minutes within the application.

Project Name: Stuckmock

URL: <https://studymock.com/>

Technology: Laravel(Backend + Frontend)

Description:

- Admins have the capability to add multiple test series designed for government exam preparation.
- Students can purchase these plans to participate in online examinations.
- Subscribed students have access to download previous papers and questionnaires from the website.
- Students can view their exam scores upon completion.
- Exams are time-based; when a student starts an exam, an automatic timer is displayed on the screen to track the exam duration.

Project Name: AdityaIoT

URL: <https://adityaiot.com/>

Technology: Laravel(Backend + Frontend + API)

Description:

- Admins can add various services such as CCTV installation and network camera setup to the platform.
- Customers have the ability to view these services and apply for them as needed.

Project Name: Taqohm

URL: <https://taqohm.com/>

Technology: Laravel(Backend + Frontend)

Description:

- Admins can manage multiple exams categorized by levels within each class.
- Each class comprises multiple exams, and for each exam, there are associated details such as PDFs, videos, and previous papers.

- Customers have the ability to add these exams or subscribe to them for access.

Project Name: Expanded Clay Aggregate (ECA)

URL: <https://www.expandedclayaggregate.com/>

Technology: Codeigniter(Backend + Frontend)

Description:

- Admins have the capability to manage multiple aspects such as products, services, charts, media, jobs, benefits of products, and blogs within the system.
- All these details are visible to users on the front-end side of the application or website.

Project Name: NKA Services

Technology: Mobile App(Front End),
Codeigniter(Backend + API)

Description:

- The system functions as a garage management system tailored for garage owners.
- Garage owners have the ability to manage spare parts inventory and customer information.
- Owners can input detailed customer information along with multiple vehicles into the portal.
- They can create bills and invoices based on the added parts and services provided.
- Customers receive automatic service reminders based on their last service date, facilitating timely maintenance.

Project Name: Vini Online

Technology: Mobile App(Front End),
Codeigniter(Backend + API)

Description:

- The application's primary function is to manage employees based on their roles, oversee inventory sales, and track sales activities linked to each employee.
- The app features multiple managers, each overseeing a team of employees.
- Managers have the authority to supervise their

team's activities and assign sales tasks based on specific areas.

- When an employee leaves the company, a unique identification number (IPAN) ensures that all location data synchronizes automatically with the system through API integration.
- The admin panel allows managers to access and review the roadmap of their employees.
- The system highlights areas where employees have successfully sold products in green on the map. Conversely, areas where sales were declined by customers are highlighted in red to denote restricted purchase zones.
