AWS DEVOPS(4 YEARS+)

HIGHLIGHTS

- **Primary Skills:**
 - CI/CD Tools: Jenkins
 - Scripting Languages: Shell
 - Build Tools: Maven, ANT
 - Version Controls: Git
 - Container Tool: Docker and Kubernetes
 - Configuration Management Tool: Ansible
 - Cloud Services: AWS
 - HashiCorp Configuration Language: Terraform
- **Additional Skills:**
 - Operating Systems: Linux (Centos,RedHat,Ubuntu),MS Windows 10

SUMMARY

- Experience in Information Technology industry dedicated to optimization experienced DevOps engineer understands the melding of operations and development to quickly deliver code to customers as well as DevOps development in Linux systems. (RHEL CentOS Ubuntu and Window)
- Experience in installation and automation/ configuration management
- Good knowledge of **Groovy and Scripting**
- Knowledge of integrating **Jenkins, TFS, Git** to provide **CI/ CD**
- Experience in launch, restart, terminate instances with AWS, whenever required
- Good in documenting and automating the build systems and tools such as **Maven, Ant in Jenkins**
- Excellent Ability in managing all aspects of the software configuration management process including code compilation, packaging /deployment /release methodology and application configurations
- Good knowledge of configuration management tool **Docker** setup for deployments
- Knowledge of virtualization on **Kubernetes**
- Expertise in deploying various kinds of applications to **Tomcat** environment
- Well-versed in **Software Development Life Cycle (SDLC)**, project management, project release, and configuration management plans
- Expertise in using various operating system which include **UNIX, Linux and MS Windows**
- Excellent in performing load balancing for web application and database for high availability
- Knowledge of business domain creation and setup in production
- Hand-on experience in administrating, deploying and managing **Ubuntu, CentOS servers**
- Excellent in managing day-to-day tasks/activities in coordination with team
- Expertise in installing and configuring **Jenkins** and TFS (CI automation tool) on Linux server/Windows which includes adding plugins and creating new **Jenkins** jobs and adding new nodes with credentials. As well as Using TFS install and configure on windows server and includes adding plugin from TFS marketplace and Create new Pipelines and installing Agent to perform CI Operations
- Well-versed in installed, configured and maintained **Git, Docker, JFrog** Artifactory on Linux servers
- Expertise in build and release management of all projects on Linux OS using make as the build tool

- Experience in version control tools **Git and SVN**
- Hands-on experience in build automation tools such as Maven/ Gradle/ MSBuild and configuration management tools such as Ansible
- Well-versed in installing configuring and maintaining Artifactory server to store binaries
- Experience in providing administration support for Git versioning system
- Well-versed in sets up new tools and develops automated release engineering scripts to increase both CM and Software Development team's productivity and quality
- Continually work towards making improvements in the Build, Deployment and Release process
- Experience in repository configuration and cloning on **Git**
- Hands-on experience in **AWS, Kubernetes, Docker.**
- Efficient analytical problem solving and decision-making skills
- Ability to collaborate with clients/project teams as well as work independently

EDUCATIONAL QUALIFICATION

- B-TECH (MECH ENGG.)

PROJECT EXPERIENCE

MAR'20 to July22

Project	: GK UAP DEVOPS FOR ASURIAN
Client	: ASURIAN (AJKK,TJKK,DOCOMO,ACYAN)
Role	: AWS DEVOPS TECHINAL
Duration	: mar 2020 to july 2022
SCM Tools	:BITBUCKET,GITHUB
Configuration Language	:TERRAFORM
CI CD Tools	: JENKINS
SCRIPTING LANGUAGE	: GROOVY SCRIPT, SHELL SCRIPTING
CLOUD	: AWS (EC2,ECS,S3,LAMBDA,VPC, AWS AppConfig, Route 53, Key Management Service, IAM, Elastic Container Registry, Certificate Manager, CloudWatch, RDS, DynamoDB,)
Tools	: Service Now, Kibana,Runbook,PRTG.

Description: -

This is a Mobile Insurance project where we develop and Menten there services and websites.

Role and Responsibilities:

- Worked with scripting language like Shell Scripting, Groovy script.
- Working on source control tools like BitBucket, GitLab, Github.
- Develop and report on key CI/CD metrics enabling data-driven decision making.
- Advanced level knowledge on Continuous Integration & Continuous Delivery practices, process.
- Worked on Container based tools like Docker,Created Docker files and build images and push to the Docker private registry. Set up the local development environments through Docker containers for new developers.
- Experience in DevOps Engineering in automating, building, and deploying of code within different environments (Dev, SQA, UAT, LT, STAGE and Prod).

Ajay Mahananda

- Supported development sprints by automating instance provisioning using cloud formation and code deployments using Jenkins, and Bitbucket.
- Created users, repositories, branching, tagging, patch fixes, pull request, and trained users on the Git version control system.
- Monitored the automated build and continuous integration process to ensure correct build execution and facilitate resolution of build/ release failures.
- Performed build and release of all software cycles engineering, test, production, update, patches and maintenance.
- Experience in designing, building, maintaining and coordinating an automated build/ release from development to production environment that also satisfies the internal audit and compliance.
- Performed build and release of all software cycles engineering, test, production, update, patches and maintenance.
- Implementing Terraform to create infrastructure in AWS environment.
- Implementing AWS various services and configure as per required
- Analyse AWS Services reducing data and memory and also reducing billing .

Aug 2022 to till now

Project 1: STROM (MR Automation Test)

AUG'22 to till now

Client: Philips

Role: DevOps Engineer

Description: Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI Automation is an automation project from Philips Innovation campus. It has 8 components to automate and worked on Site Activity Service (SAS) component to automate.

Responsibilities:

- Engaged in admin of the TFS server (Azure DevOps Service)
- Installed Agent to perform the team foundation background job agent service provides a single Windows-based service to schedule repeating tasks on servers that are running Azure DevOps. The service runs through the registration database, identifies all Azure DevOps
- Maintained track of different releases that are being carried over in different environments
- Created .DLL files using MSBuild
- Checked test result implement NUnit in Pipeline
- Checked code coverage implement NCover in Pipeline
- Automated the built process using TFS
- Automated and monitored built with TFS. Troubleshoot application related issues
- Used TFS to automate the whole pipeline, with email notifications enabled for each success and failure of built or the process
- Made application, reports and script ready for the release on time
- Troubleshoot application related issues by logged verification
- Verified deployments logs to check for successful deployments on deployment server
- Engaged in documentation of the patch process and built/ release process

Ajay Mahananda

- Gained experience in bug tracking and analyzing test results and prepared release notes
- Worked closely with development on building and deployment issues
- Performed deployments to multiple environments using Ansible
- Used SCM tools to update and install necessary tools and package

Environment: Git, MSBuild, NUnit, NCover, TFS, PowerShell Scripting, JFrog, Windows, Application Server, Ansible

COMPANY : GLOBE ACTIVE TECHNOLOGY LIMITED
