
Profile

Seeking an opportunity to utilise my years of experience and skills in data engineering and analysis to make a real impact. Proficient in SQL, ETL processes, data ingestion, data visualisation tools, cloud technologies and basic ML algorithms. With strong analytical mindset and collaborator ,effective communication and a passion for innovation, delivering high-quality solutions on time and within budget

Skills

Programming Languages & Databases - Python, PySpark, MySQL, PostgreSQL, MongoDB(No sql), Java, C++.

Big Data & Data Management - Hadoop, Spark, Data Warehousing, Data Lake, Hive, Sqoop, Kafka, Airflow.

Cloud Technologies -Azure(DataFactory, Databricks, Synapse Studio, Blob Storage,Function App, Key Vault), AWS (Lambda, S3, RDS, Redshift,EC2).

DevOps - Docker, Git.

Analytical tool- PowerBI

Data Modelling, Quality Assurance & Optimization.

Experience

Coditas Solutions | Associate Data Engineer

Pune, Maharashtra | 08.2022 - Current

- working as Associate Data Engineer for Basix.ai which is a Canada based data driven sales acceleration platform from Basix
- building the stream processing data pipeline which can ingest both standardised and non standardised data from various sources Data Ingestion/Pipeline Technologies
- building the data lakehouse along with data modelling which will store all the data and also monitors and analyses this data.
- Using data lakehouse along with other sources to analysis the data and gather important insights and predictions technologies used for analysis
- Besides data platforms also worked on the Reconciliation which will report stream processing of data
- Performed ETL operation on data using dataflows, function in Azure Datafactory and timer trigger for every 30 mins to storage data in blob storage
- Explored about Http,Timer and Blob storage trigger in azure Functions App and Created a Http Timer trigger function which is called using data bricks notebook without waiting for response
- Created Transaction and Archived table script where data is transformed and loaded from Source in Data bricks and explored about medallion architecture
- Worked on Delta Table in Databricks regarding Merge query and explored about vacuum , optimization and spark cluster pool
- Worked on azure synapse pipelines,Dedicated SQL pools,External table and connected with azure function for downstream applications

Coditas Solutions | Associate Software Engineer

Pune, Maharashtra | 01.2022 - 08.2022

- By the end of the six-month internship developed a solid foundation in Python, Django, PySpark, SQL, Git, and Power BI and ETL processes
- Emphasise to coding best practices and standards to ensure clean and maintainable code
- Successfully managed code changes using branching and merging strategies, ensuring seamless integration of new features and bug fixes and actively participated in code reviews

Education

Acharya Institute of Technology | Bachelor of Engineering

Bangalore, Karnataka | 07.2018 - 07.2022

CGPA - 8.0/10

Relevant Coursework - Python for data Science, RDBMS , Associate Data Engineer (AZ-203) , Big Data Ecosystem.

Projects

Credit Card Fraud detection

- This project involved detection fraud in credit card transaction on streaming data using technologies like Airflow,HDFS , Sqoop ,HBase ,Airflow ,AWS RDS and provide real time analysis using power
- worked with full load data handle and incremental data handle including real processing
- Also provide a Dashboard for all insights and important data

Analyze ClickStream Data For E-commerce

- Leverage Hadoop to analyze and identify most efficient path for customers making an online purchase.
- Performed cleaning and filtering of data using hive.
- Merged the clickstream data with the traditional customer data in order to get better insights into the behavior of the customer using HQL.
