TECHNICAL SKILLS

Languages: - Python, SQL ,
Unix

ETL Tool: - Informatica,
Visual Studio-SSIS

BI Tool: - Tableau

Project Management: -Jira,
HPALM

Testing Tool: - Selenium

Python Framework's: -
Pytest Framework.

API Testing Tools: - Postman

Tools: - PyCharm

Eclipse

Excel

GitHub

Jenkins

JMeter

Allure Report.

WORK EXPERIENCE

QA Engineer

ZS Associates, Pune

- 3.9 + year of work experience in the area of Software Testing.
- Experience in Web Applications.
- Experience at a Tester within Agile software development process and Waterfall model and other model.
- Experience in understanding the Customer Requirements and deriving the Test Scenarios/Conditions based on the Requirements.
- Experience in Executing different types of system test cases based on the User requirements.
- Experience in various types of Black box testing.
- Experience in raising the defects using the Defect Management Tool like Jira, Git issue Tracker.
- Experience in preparation of execution status reports and Defect reports.
- Involved in Defect review meetings with the development team along with the testing team for the resolution of the defects.
- Experience in Automation testing with tool like Selenium.
- Knowledge in API testing with tools like Postman, Pytest script.
- Expertise in Telecom, CRM and Desktop domain applications.
- Exposure to all stages of SDLC, STLC and Bug Life Cycle.
- Expertise in different types of testing-Functional testing, System Testing, and Performance testing.
- Experience in Execution of Test Cases, Debugging and Bug reporting.
- Expertise in handling the customer issues, root cause and provide the resolution in time.
- Experience in Black Box Testing, E2E Testing, Validation testing, and Regression Testing.
- Knowledge on OOP's concepts and hands on in Python scripting.
- Experience in automation testing using Selenium WebDriver and Python.
- Experience in Git pipeline, Jenkins, Git Commands, Selenium Framework, Github repository
- Experience in developing Automation test scripts by understanding the Manual Test Cases.
- Experience in writing the Xpath expressions.
- Easily Collaborate with developers and project manager to accomplish project milestones and Business.
- Data flow validation from the staging area to the intermediate tables, Surrogate key check.
- Knowledge of all Data warehousing /DWH concepts, Good understanding of OLAP , OLTP, Star schema, snowflake schema
- Worked on Unix Platform and experienced in back end testing by executing SQL Queries.
- Involved in ETL process testing using Informatica/SSIS ETL tool
- Experience on Git, Docker and Jenkins
- Experience in Jira board and Agile SCRUM Framework is used for project activity needs.
- Ability to learn quickly and to correctly apply new tools and technology.
- Good understanding of Object Oriented Program.

EDUCATION: -

SSC from Maharashtra Board | 2014

HSC from Maharashtra Board | 2016

Bachelor of Computer Application | 2019

From Shree Shivaji Science College Amravati

Master of Computer Application | 2021

From Prof. Ram Meghe Institute of Technology and Research Amravati

Projects Handled: -

Project No:1

Project Name: Sympliant in Healthcare Domain

Testing: **Manual Testing and ETL Testing**

Description:

Project was a healthcare technology company revolutionize the monitoring, analytics, tracking and reporting functions in the GI lab. The sympliant automates the tasks of endoscope reprocessing compliances, documentation, and payment gateway and reporting in a powerful and easy-to-use. Where my responsibility is to test the whole web-based application of admin, hospital equipment application. I use scenarios to create hospitals, hospital department members with specific permission process of equipment form Admin application. And check the whole process of application of hospital equipment maintenance and equipment used by the hospitals. Also test the security functions used in application face recognition ID and Pin code. Done target database validation, perform ETL testing for quality, quantity and format of data.

Project No:2

Project Name: NEBMedical in Healthcare Domain

Testing: **Automation Testing**

Description:

Project was a Health and Private sector.

In this project I was the part of the Automation & Manual QA team. Where my responsibility is to test the functional part of the application using Selenium. My main role was to achieve a bug free functionality. Where the multiple data collections used for test the functionality of application. I used Data driven framework to pass the excel sheet data into the functionality automatically. I tested both regression and change request-based testing by writing an automated test script.

Project No:3

Project Name: West River Academy in Education Domain

Testing: Automation Testing & Manual Testing

Description:

Project is about School. West River Academy is an international fully accredited independent private school. It is for families who desire the benefits of private school enrollment and minimal educational activities. West River Academy offers students the opportunity to graduate from an accredited private academy (The High School Diploma Program). My main role is to achieve bug free web-based application. I used to do regression and functional, integration and negative, GUI testing on the application.

Task Handled in Projects:

- Understand and analyzed the customer requirements
 - Involved in daily meetings to identify issues and assign work.
 - Defining Test Scenario of newly assigned user story.
 - Performed Sanity Testing, Functional testing, Database testing, ETL testing, report testing Design Actively involved in System Integration Testing (SIT) of billing system and CRM database.
 - Done target database validation, perform ETL testing for quality, quantity and format of data.
 - Execute the test cases, registered defects and test summary reports in Jira
 - Designed test case and executed test cases based on Business Requirements for both Manual and Automation Testing.
 - Performed cross Browser testing for IE, Firefox and Chrome browser
 - Defect logging and reporting in to Jira.
 - Responsible for the test automation efforts estimation, test plan preparation, automation framework design, in-sprint story test automation and QA/regression sign-off.
 - Developed/Maintained the automated test scripts for functional and concurrent performance testing using the test tools/test framework written in Python/Selenium, Jmeter in the continuous integration environment using Jenkins.
 - Integrated the automated test suites from Jenkins, run regression on daily basis for every code changes, analyze the test results and report the test execution progress to project team.
 - Prepared/reviewed the test plan created for the different project tracks.
 - Review requirement/design and track the progress of the test scenarios, test cases developed from the team.
 - Identify the process improvement, tools for efforts saving for the tasks performed in the test life cycle.
 - Worked closely with the QM, Project team, Sr. Dev managers, Business/UAT for the weekly automation deliverables, mentored the team on the early automation concepts, using automation environment for the script development, work with the development team for the timely resolution of the issues/blockers reported on the stub & QA environments regression execution.
 - Preparing the automation daily status report, weekly report, metrics and project plan update.
 - Execute the scripts on daily basis and fine-tune the scripts to improve the script scalability and reduce the execution time.
 - Strong Knowledge of Generating Report in Allure Report ,HTML Report, Jenkins with Python.
 - 80% of the functional test cases are automated at the time of the production pilot testing and regression testing of the automated test cases been performed on each run on the new post pilot build.
 - Attended daily Agile scum meetings for status reporting on automation deliverables, led the team in developing the automation scripts for each sprint and assisted the functional team in the regression execution of the previous sprint requirements.
