Database : Oracle, DB2.
Test Management Tool : Quality Centre HP Alm, RTC (Internal Tool), Postman, Jira, Azure TFS
Other Tools : Toad, SQL Developer

PROJECT DETAILS

Project	1
Project Domain	Healthcare
Project Name	Cotiviti
Client	Independent Health
Role	Test Engineer
Organization	Atos Syntel
Location	Bangalore
Duration	Dec 2022 – Till date

a) *Project Description*

Independent Health (IH) has contracted with Cotiviti LLC., to perform data mining and recovery review services of our Medical Claims to identify and recover overpaid or improper medical claims and other claim recovery opportunities. There have been discrepancies related to term dates within the eligibility files that Cotiviti brought to IH's attention. Cotiviti's analysis conclusion was that this is widespread and occurs on every claim to date, thus, leading them to believe that it affects every claim sent to them. The impacts specifically are related to term dates. After a review of the dates by the enterprise architect and EDW architect it was determined that there was an issue related to the EDW load and what was being pulled. The conclusion of the EDW team was that the files should not pull eff/exp dates in D_ACCT for account term dates since those dates apply to the account itself and not to the member's relationship to the account.

Project	2
Project Domain	Banking
Project Name:	SFBAU
Client	State Street Bank & Trust Company (US)
Role	Test Engineer
Organization	Atos Syntel
Location	Bangalore
Duration	May 2021 – December 2022

b) Project Description:

SFBAU Transaction Exposure Monitoring (TEM) System application/framework is a centralized repository to hold the positions, collateral, loan, Exposure, security and counterparty reference data for multiple business lines.

Tem source data from upstream systems (SPD, MDD, CMS, LMS), through files or golden gate approach.

Data received has to undergo various process. Once the normalized data is available the system Constructs the portfolio followed by which TEM generates The business line-AFS, Fact repos (GT Repos), FXGT, ECES and EC VaR are integrated on TEM.

The limits and the UCI data is received from CMS, LMS system, Market Data from MDD and the asset

Classification from RDDates the data files required for risk engines

And feeds into Risk Metrics for VaR calculation. The data n TEM has to follow through 7 levels of services or modules for each business line

Integrated on the TEM framework. The services are namely On boarding, Core load or Normalization, Risk portfolio Constructions, Risk Engine Interfaces, Aggregation, post processing and Information Delivery Services.

The data is consumed by CCST System, RDR Systems, and ESP System – to generate IDR Reports.

Project	3
Project Domain	Retail
Project Name:	Debenhams Retail
Client	Sears Holdings Corporation, UK
Role	Test Engineer
Organization	Atos Syntel
Location	Bangalore
Duration	Dec 2019- Apr 2021

c) Project Description:

Sears Holdings Corporation is the nation's fourth largest broad line retailer with over 4,000 full-line and specialty retail stores in the United States. Sears Holdings is the leading home appliance

retailer as well as a leader in tools, lawn and garden, consumer electronics and automotive repair and maintenance. Sears Holdings Corporation operates through its subsidiaries, including Sears, Roebuck and Co. and Kmart Corporation. The company will continue to market products under brands held by both companies.

Project	4
Project Domain	Healthcare
Project Name:	APC Data Edit
Client	UnitedHealth care, US
Role	Software Test Engineer
Organization	IBM
Location	Bangalore
Duration	May 2018 – July 2019

d) Project Description:

The Network Contract Management (NCM) department reviews CPT and HCPCS codes on a quarterly basis via a multistep process to determine which codes should be updated and loaded to Health Rules. These codes are used as part of the claims adjudication process and do contain effective dates which also is considered when a claim adjudicates. These are service codes that identify what services were rendered to a member. These can include, but not limited to ambulance, skilled nursing, hospital, ancillary services, and others. The review process begins after a communication is received from Optum via email that the latest files are available. Once the email is received, the files are securely downloaded, reviewed by NCM for new, termed, or changed codes. Full detail of the process for both the CPT and HCPCS is listed below under 'Current SOP'. The SOP's listed below contain the steps which are desired to be automated going forward to reduce manual intervention. Through automation, less errors should occur. Overall, the base file contains all the codes, then there is a change file that contains codes with dates. There is a level of formatting NCM does to prepare files to load that will need to be considered as part of the project deliverable. In addition, the codes should be consistent across all regions (DEV, INT, UAT etc.) of Health Rules. Current CPT SOP

PERSONAL DETAILS

Name : S.Gouse lazam
Father's Name : S.Nazeer ahamed
