To take up a challenging role for putting my strength to the best use, explore my knowledge and helping me to advance to a more suitable position in the Industry.

PROFESSIONAL SUMMARY

I have 13 years of experience in IT industry and 8+ year's domain subject matter expertise in Banking/Credit Card/Telecom/E-Commerce Services as a **Lead ETL (AbInitio) developer** with 2 Years of support environment experience.

- ETL design and development with experience in large scale Business Intelligence and data warehousing projects in banking, ecommerce and credit card/Payment card industries.
- Hands-on development experience with various abInitio components such as Rollup, Scan, join, Partition by key, Partition by Round Robin, Gather, Merge. And advance components as
AbInitio 3.5.x or 4.0.x software suite – Co>Op, EME, BRE, Conduct>It, Express>It, Query>it, Control>Center
AbInitio 3.5.x or 4.0.x frameworks – Acquire>It
Databases - Oracle 11G/12C, Teradata, MongoDB, Snowflake, Cassandra
Others – JIRA, Service Now, Linux 6/7/8, SQL Developer, AutoSys, and Microsoft Office
- Ability to design and build AbInitio graphs (both continuous & batch) and Conduct>it Plans , and integrate with portfolio of AbInitio software Testing the changes and ensuring the successful implementation of requirements. Build graphs interfacing with heterogeneous data sources.
- Liaise with various business and project stakeholders on an ongoing basis to understand their needs and priorities as well as to pro-actively. Experience in designing and delivering complex, large-volume data warehouse application and source-code control using EME. Build Control Center Jobs and Schedules for process orchestration. Build BRE rule sets for reformat, rollup & validation use-cases. Build SQL scripts on database, performance tuning, and relational model analysis and perform data migrations. Ability to identify performance bottlenecks in graphs, and optimize them. Ensure AbInitio code base is appropriately engineered to maintain current functionality and development that adheres to performance optimization, interoperability standards and requirements, and compliance with client IT governance policies. Build regression test cases, functional test cases and write user manuals for various projects. Conduct bug fixing, code reviews, and unit, functional and integration testing. Participate in the agile development process , and document and communicate issues and bugs relative to data standards
- Good analytical and problem solving skills coupled with creativity and can-do attitude
- Experience of working in a multi-cultural environment with ability to remotely coordinate with various spread across different locations and time-zones
- Responsibilities include building relationships with stakeholders' holders, understanding business issues, gathering and analyzing requirements, feasibility study, modeling data flows, inventing and specifying creative solutions and working with development team to implement solutions that delight customers.
- Efficient in developing data management solutions using UNIX shell scripts, Autosys, Ab Initio, Oracle – RDBMS, SQL/PLSQL, TeraData.
- Core experience in full life cycle Data warehousing development projects which include requirement gathering, analysis, design, development, Unit testing, release, implementation and support. Technical experience in Design Mapping specifications, HLD, LLD, Development Coding, Unit testing

- Extensive exposure of Production support environment – Project implementation life cycle, troubleshooting, root cause analysis and issue resolution, automation, enhancements, upgrades, migration, problem management and maintenance of Data Warehousing applications and tools.
- Extensive experience in interaction with business users and functional POC for gathering the business requirements and functional specifications.
- Excellent communication and analytical skills and expertise in Domain knowledge.
- Having strong knowledge and experience in DW concepts and tools.
- Strong experience in end to end software development .Strong knowledge in ETL transformations and to enhance performance both in job and environment level and to troubleshoot and perform root cause analysis around issues and documenting the defect analysis.
- Exposure to Hadoop/Spark for LRR-CHINA regulatory reporting POC.
- Exposure to Azure for Clinical DM Liquidity Conversion in Optum.
- Exposure to Python scripting.

EXPERIENCE

Organization	Designation	Duration
Virtusa (Polaris Consulting Services and Pvt. Ltd.)	Lead Consultant- Technology/Business Analyst	April'2018-Dec2021
Compact Solutions, Ahmedabad	AbInitio Senior Consultant/ Senior Software Engineer	OCT'2014-SEP'2017
Tech Mahindra, Mahindra Satyam Pvt. Ltd./Hyderabad, Bhubaneswar	Team Lead/Senior Software Engineer	Feb'2008 – Oct'2014
Satyam Computers Pvt. Ltd., Hyderabad	Associate Software Engineer	

EDUCATION

Degree	University	Percentage (%)
B.Tech (C.S. & Engg.)	Biju Patnaik University of Technology, Odisha.	
		82%

TECHNICAL SKILLS

ETL Tool	Ab Initio / GDE / ACE / BRE
Languages	Functional Knowledge of UNIX Shell script and SQL/Oracle/Teradata
Database	Oracle 10G, Oracle-11G ,Teradata and Exadata
Operating Systems	Unix, Windows 2000/XP/Vista/7/8.1/10
Domain Knowledge	Credit Card, Banking, E-commerce, Payment Gateways
Tools & Utilities	Clarify, ServiceNow, OneGE, Citrix, Edit Plus, TOAD 6.5.0., Autosys 4.5, SQL Developer ,JIRA Tool

PROJECT PROFILES

1. United Health Group(Clinical Rx DataMart)	
Module	AbInitio – Azure Liquidity Code Conversion , ETL – AbInitio
Role	Lead AbInitio ETL Analyst
Team Size	Project: 7 Members
Environment	Database : Oracle 10G , Netezza, MySQL , Synapse

2. CITI BANK	
Module	RegInsight China / EMEA GDAP / GLRS
Role	Lead ETL Developer / Individual Contributor & GLRS-Support Lead
aTeam Size	Project: 9 Members
Environment	ETL AbInitio / Database : Oracle 11i , MySQL, Netezza

Reginsight China is a regulatory reporting automation project for China which deals with complex reports report for regulatory body. China Banking Regulatory Committee (CBRC) has set regulatory report quality Management standards and following those standards set by CBRC around 400 reports have been automated. RI China is a an end to end product where we deal with Feed processing from Genesis feed processor and load them into Operational data source , process them and load into relational data management which is used to generate the reports for the regulator. RI is a common framework which enables CITI's international operations to meet its local regulatory obligations.

- Generate country specific D/W/M/SA/A regulatory reports.
- Compare & Analyze data across multiple periods. Drilldown on contract basis for investigations.
- Centrally controlled reporting rules written on Rules harmony and interpretation of regulatory requirements by BRE AbInitio.
- Once rules written completed on RH, report integration starts in AbInitio with conversion to BRE language and helix installation which will re-package rules with Abinitio standard coding.
- Then reports will be segregated to sub-rule basis and data must flow from RH to drilldown table for showing complexity of amount involved which should match with regulatory committee amount specified.
 - Worked on the Quality Analysis of the products, responsible for the Defect tracking and Classification
 - Extensive usage of Multifile system where data is partitioned into four partitions for parallel processing. Wide usage of Lookup Files while getting data from multiple sources and size of the data is limited. Developed Generic graphs for data cleansing, data validation and data transformation.
 - Created several Ad-Hoc graphs to provide reports to instant requests from Business.
- In the project , I have a clear knowledge in version controlling using Ab Initio EME. Skilled in developing Ab Initio codes for various business requirements using AbInitio Co>Ops 3.1/3.2.
- Work experience in Plans/Sub-plans/MFS/Control center/BRE/Continuous flows.
- Theoretical Knowledge on Ab Initio Query>It.
- Functional knowledge on E2E implementation across the components used/involved.
- Experience in Autosys Scheduling.
Experience in continuous flow, Conduct>IT ,Multi files and meta programming.
- Analyze transformation rules, rating the complexities and preparing the estimations.
- Prepare and executing E2E, Integration, functional, smoke test cases. Writing SQL queries for data validation.

SHUTTERFLY	
Module	SHUTTERFLY (E-commerce & Finance) (Duration :- Jan'15 – July'17)
Role	ETL Developer and Analyst
Team Size	Project: 5 Members
Environment	ETL AbInitio / Database : Oracle 10G , TD

- Extensively worked on AbInitio Tool using various easy and complex components for both continuous and batch processing.
- Involved in design, testing and implementation.
- Created 10-15 different complex and medium level plans and graphs for populating data from e-comm server and loading them in to staging tables, fact tables and then in to dimension tables.
- Developed all outbound and inbound scripts in Unix.
- Modified 5-6 graphs for supporting and enhancing the new logic being used across all BL_DI environments. Involved in UAT and test cases for Oracle to TeraData migration activity.
- Designed/Involved in creating code for data processing system up to a volume of 2TB.
- Strong working knowledge of Data Warehousing techniques and Concepts experience including ETL processes, Star Schema/Snowflake Schema
- Worked on Databases like Oracle, SQL Server, TeraData.
- Extensive experience in interaction with business users and functional POC gathering the business requirements and specifications.
- Worked on the Automation of the ETL jobs using Autosys.
- Involved in System and Integration testing of the project.
- Worked closely with QA to help them understand the system to meet all the required test cases to be verified before the code is migrated to subsequent environments UAT and PROD.
- Written wrapper scripts to automate batch jobs and also provided production support when needed.
- Process and Transform delta feeds of customer data, which comes in daily.
- Performance tuning and migration. Support for suitable code implementation activity.

Client	3. Synchrony Financial (Bank, CreditCard, PG)
Team Name	COLLECTION & RECOVERY DM Run/Build (Duration Dec'08-Oct'14)
Role	Team Lead , Senior ETL Developer
Organization	Tech Mahindra
Team Size	10
Environment	ETL AbInitio / Database: Oracle 10G & Exadata Tools: Autosys, Toad, Unix

Project Summary:

The Collection warehouse “AS IS” system is having around 15000 jobs with lots of technologies such as SAS,perl,Unix scripting,PL/SQL.The project is for conversion of existing cumbersome process into more flexible process using ABINITIO as a ETL tool. The CDCI–RCF project deals with the credit card related data processing and loading. All the credit card related information like demographic,transaction,billing related information etc are being received as flat file/EBCDIC files, which will be processed under ETL using Abinitio Graphs, then the processed data will be loaded in to the target tables, which are in oracle.

- Introduction of Pre-ETL process and its integration with the existing ETL process to replace account numbers with tokens and separate out sensitive information. Design of a generalized look up process for replacing

token for account numbers with the account number in all the extracts before sending them to other systems via GEntran, Mainframe. Tokens creation for all accounts received (RCF) and storing them in the Token DM.

- Separation of sensitive fields and loading them in the secure info tables in Token DM.
- Database level changes in each table having account number to accommodate tokens generated for account numbers. History updates of tokens in all the tables having account number information.

Updating the Dependency of Autosys jobs for extracts for making the extracts pass through the generalized job for account number look up from token. Creation of a setup to make the account numbers available for the requested token numbers to business users.

- Ability to identify performance bottlenecks in graphs, and optimize them.
- Ensure Ab Initio code base is appropriately engineered to maintain current functionality and development that adheres to performance optimization , interoperability standards and requirements, and compliance with client IT governance policies
- Build regression test cases, functional test cases and write user manuals for various projects
- Conduct bug fixing, code reviews, and unit, functional and integration testing

Participate in the **agile development process** , and document and communicate issues and bugs relative to data standards

PERSONAL DETAILS

NAME	Santosh Kumar Dash
E-MAIL	eastskd166@yahoo.co.in
NATIONALITY	Indian
LANGUAGES KNOWN	English, Hindi and Odia

DECLARATION

I hereby declare that the above said information is true to my best knowledge.
