- POWER BI REPORT CREATION
- SNOWFLAKE DEVELOPER
- DATA MODELING
- MS SQL SERVER DB DESIGN
- LARGE SQL QUERY HANDLING
- SQL QUERY OPTIMIZATION
- DATA WAREHOUSE DESIGN
- SSIS ETL PROCESS
- SSRS REPORT CREATION
- CLOUD COMPUTING SERVICES ON MICROSOFT AZURE
- GOOGLE VISUALIZATION REPORT CREATION
- API INTEGRATION AND MAINTENANCE USING .NET FRAMEWORK
- SITE SCRIPTS AND SITE DESIGNS IN ONLINE AND FULL STACK DEVELOPER
- DESIGN AND IMPLEMENTATION OF SOLUTIONS AND CUSTOMIZATIONS FOR CLIENT-SERVER APPLICATIONS
- TESTING AND DEBUGGING
- THIS EXPERIENCE HAS BEEN GAINED THROUGH WORKING WITH VARIOUS TOOLS AND TECHNOLOGIES SUCH AS SNAP LOGIC, C#, .NET FRAMEWORK

SELVA KUMAR A

SENIOR POWER BI DEVELOPER

PROFILE

I have 12+ Years of experience in Database Development and Business Intelligence (Data integration, Analytics and Reporting) involved in various aspects of SDLC by performing different roles such as SQL Programmer, Senior Database Developer and Business Intelligence Architect for Large Applications. Extensive working experience in Design, Development and Maintenance of SQL Server database that includes but not limited to creating complex **Stored Procedures. Triggers. Views. Functions. etc.**

CERTIFICATIONS

Microsoft Certified In,Power Bi Data Analyst

EDUCATION

MSc (Computer Science)

Madurai Kamaraj University

EXPERIENCE SUMMARY:

Total experience in Software Development is 12+ years.

Snow Flake 1 year.

Power BI and Sql Server 6 + Years.

Data Analyst 6+years

SSBI Tools like SSIS,SSRS 3 Years.

Visual Studion C# 3 Years.

PROFESSIONAL SUMMARY:

- **Specialized in designing and architecting Power BI Reports**
- **Executed end-to-end migration of on-premises data warehouse to Snowflake.**
- **Optimizing data models, implementing ETL processes, ensuring security compliance**
- **Facilitating seamless BI integration for improved analytics.**
- **Well versed in MS Dynamic and Start Schema**
- **Specialized in designing and architecting Database and Complex Batch Processiong Solution using MS SQL Server**
- **Specialized Dax Quries**
- **Well Versed in Data Modelling and Data Visualizations**
- **Highly Proficient in designing Data Warehouse and Business Intelligence Solution using Microsoft Business Intelligence Suite(SSIS and SSRS) and T-SQL**
- **Have Excellent Skillset in Designing creative, user friendly and self service reporting solution using PowerBI**
- **Experienced in Performance tuning of SQL Server database by applying tools and techniques such as Indexing, ReIndexing, Execution Plan analysis and Index Tuning Wizard**
- **Cloud computing services on Microsoft Azure**
- **Google Visualization report creation**
- **API integration and maintenance using .Net Framework**
- **Site Scripts and Site Designs in Online and Full Stack Developer**
- **Design and implementation of solutions and customizations for client-server applications**
- **Testing and debugging**

PROFESSIONAL EXPERIENCE AND SOME OF MY RECENTLY WORKED PROJECT DETAILS:

#1	TechLeaf Solutions
----	--------------------

Team Size	5
Role	Senior BI Developer and Data Analyst
Technologies	Snowflake, SQL Server, Power BI Report Development, Power BI Dataset Creation

Project Description:

The project involved implementing a comprehensive Power BI analytics solution to transform raw data into actionable insights across diverse business domains. The domains covered included sales, marketing, accounting, finance management, and customer relationship. The primary goal was to provide stakeholders with a unified and interactive reporting platform, enabling data-driven decision-making across the organization.

Responsibilities:

- Analyze existing on-premises data sources, structures and data flows to determine migration requirements
- Use Snowflake Database View
- Developed robust data models in Power BI to accommodate the unique requirements of each business domain.
- Designed and created visually appealing dashboards for each domain, incorporating key performance indicators (KPIs), metrics, and actionable insights.
- Enabled real-time monitoring of sales pipelines and marketing ROI.
- Worked with finance and accounting departments to implement financial reporting solutions in Power BI.
- Integrated insights from different domains to provide a holistic view of organizational performance.
- Implemented robust data governance practices to ensure the accuracy and reliability of the data used in Power BI reports.
- Conducted regular data quality assessments and addressed any discrepancies.
- Implement the Snowflake schema in the database.
- Create scripts and procedures for ETL (Extract, Transform, Load) processes to populate the Snowflake schema.
- Develop Power BI reports and dashboards for retail and online store analytics.
- Implement DAX (Data Analysis Expressions) calculations for advanced analytic
- Successfully designed and implemented a scalable Snowflake schema, improving data organization and efficiency.
- Developed interactive Power BI dashboards providing insights into sales performance across retail and online channels.
- Enhanced data quality and accuracy, resulting in more reliable analytics outcomes.
- Implemented robust security measures to safeguard sensitive customer and financial data

#2	Eu Yan Sang
----	-------------

Team Size	12
Role	Senior BI Developer
Technologies	SQL Server, Power BI Report Development, Power BI Dataset Creation

Project Description:

Eu Yan Sang is a company that specialises in traditional Chinese medicine. It currently runs 170 retail outlets in Singapore, Malaysia, Hong Kong and Macau, plus four factories in Hong Kong and Malaysia. The group also operates 28 TCM clinics in Singapore, Malaysia and Hong Kong. Eu Yan Sang has an extensive distribution network with over 170 Eu Yan Sang retail outlets in China, Hong Kong, Macau, Malaysia, and Singapore. Additionally, it operates 30 TCM clinics in Singapore, Malaysia, Hong Kong, and China and a food and beverage outlet in Malaysia.

Responsibilities:

- Requirement analysis
- Use Snowflake Database View
- PowerBI Report Development
- PowerBI Data Set Creation
- Manage SQL Server Views
- Provided Support for Previously Delivered Reports
- GFDR Data Migration to Serverless Synapse
- ETL Process Using Boomi
- Functional testing
- Performance testing
- Production migration

#3	Eyecare Service Partners (ESP)
----	--------------------------------

Team Size	4
Role	Senior BI Developer
Technologies	SQL Server, Power BI Report Developement, Power BI Dataset Creation

Project Description:

ESP is a rapidly growing healthcare organization that is revolutionizing the way patients receive eye care in the United States. With a focus on consolidating and optimizing the operations of locally dominant and clinically differentiated ophthalmologic and optometric practices, ESP is quickly becoming the industry leader in terms of quality and scale. By leveraging data from nearly 30 eye care brands across the country, ESP has developed a patient-centric model that delivers exceptional care and quality outcomes through their dedicated providers and staff.

Responsibilities:

- Requirement analysis
- Accounting Business Understanding
- Query Optimization
- Batch Process Creation
- Power BI Report Creation
- Functional testing
- Performance testing
- Production migration

#4	Software System, Australia
----	----------------------------

Team Size	12
Role	Power Bi Report Developer and SSIS Developer
Technologies	POWER BI,SQL Server, SSIS

Project Description:

The client manages a comprehensive medical data warehouse that contains detailed information about patients, hospitals, doctors, pharmacies, and payment tracking. They collect survey data related to patients' health issues and use the data warehouse to generate reports for analysis and decision-making. The data warehouse serves as a valuable resource for healthcare providers and administrators to gain insights into patient health, improve healthcare outcomes, and optimize operational efficiency.

Responsibilities:

- Requirement analysis
- Database design
- TSQL Development
- Data Modeling
- Power BI Report Creation
- Data Validations
- Unit testing
- Integration
- Functional testing
- Performance testing
- Production migration

#5	Vinu Zachariah USA
----	--------------------

Team Size	9
Role	Database Architect and PowerBI Developer
Technologies	SQL Server, Power BI

Project Description:

Client handles a Learning Express Library data warehouse which provides details about tutorials, practice tests, e-books, flashcards and articles undergone by users across Consortiums/Institutions for their academic skill-building, standardized test preparation, career development and more.

Responsibilities:

- Developing Data Modelling
- Data Analysis
- Creating Visualizations for Power BI Reports
- Building Power BI Reports to provide usage statistics
- at consortium/institution level on number of sessions started,
- user registrations, page hits, logins, searches, number of individual
- resources added to user accounts including tests, tutorials, computer courses, e-books, etc
- Developed Dax Queries for all types of functional needs
- Data Model Creation
- Power BI Report Creation
- Integration
- Maintenance of the data warehouse and ETL enhancements
- Final implementation and testing
- Error handling
- Production deployment

#6	Net ready
----	-----------

Team Size	10
Role	Data Analyst and PowerBI Developer
Technologies	SQL Server, Power BI

Project Description:

Clients can begin using the product within one week of implementation. This SAAS-based ERP solution offers over 40 configurable types of commissions, incentives, and recognitions that can be tailored to specific business needs.

The product is customized for various domains, including retail (acornkids.com in South Africa, kidsbeehappy.com in Scotland, and umgalelo. Africa in South Africa), insurance (Old Mutual in South Africa), real estate (propertyservicebook.com in South Africa), tourism (Greentea.com in South Africa), and restaurant chains (GoDineClub.com in the USA). The solution is designed to streamline and optimize business operations in each of these industries, providing increased efficiency, profitability, and customer satisfaction.

Responsibilities:

- Requirement analysis
- Designed and developed custom reports using Power BI to provide valuable insights into business performance.
- Designed and developed Data Modelling and Data Visualizations for all production Details
- Developed DAX Queries for Data Modelling and all required functions
- Conducted in-depth requirement analysis to gather and document functional and technical specifications.
- Created effective database designs that align with business requirements and optimize performance.
- Developed complex TSQL queries and procedures to extract, transform, and load data from various sources into the database.
- Integrated various systems and applications to ensure seamless data flow and business process optimization.

- Conducted thorough functional testing to ensure that the system meets all functional and non-functional requirements.
- Performed rigorous performance testing to identify and address performance bottlenecks, ensuring that the system meets performance requirements.
- Managed the production migration process to ensure that the system is deployed successfully and meets all production requirements.

#7	Gambit Finance Belgium
----	-------------------------------

Team Size	15
Role	Power BI Report Developer and Data Modelling Developer
Technologies	POWER BI, SQL Server

Project Description:

A data analytics product has been developed to profile banking customer data for investment advice and risk management. The product integrates customer data from leading banks, including Ami Corp, Credit Suisse, and Commonwealth Bank.

Responsibilities:

- Requirement analysis
- Designed and developed Power BI reports to provide insights into customer data and investment opportunities.
- Designed and developed Data Modelling and Data Visualizations for customer data from various sources
- Optimized DAX Queries for requirements and Developed Modelling
- Conducted detailed requirement analysis to determine product specifications and functional requirements.
- Designed and developed SSIS packages to extract, transform, and load customer data from various sources into the database.
- Developed and implemented an effective database architecture and design to optimize data storage and retrieval.
- Integrated various systems and applications to ensure seamless data flow and business process optimization.
- Deployed the solution and ensured its successful implementation in the client's environment.
- Provided ongoing support and maintenance to ensure the continued performance and effectiveness of the product.

#8	Mahilen Technologies, India
----	------------------------------------

Team Size	2
Role	Project coordinator and Developer
Technologies	Visual Studio .NET2019, ASP.NET, ADO.NET, Angular JS, J Query,Internet Information Server, My SQL Server 2019, JSON

Project Description:

Gurukulakalvi.com is an online platform that caters to students preparing for various competitive exams at different levels. The platform offers a range of study materials and resources, including current affairs and general knowledge sections that are particularly popular among students.

Responsibilities:

- Requirement Analysis
- Conducted detailed analysis and design of requirements to develop effective study materials that meet the needs of the students.
- Created e-materials that are easy to access, understand, and use for students preparing for different competitive exams.
- Designed and developed PDFs using data to provide a comprehensive and engaging learning experience.
- Created reports using Google Visualization to provide insights into student performance, progress, and areas of improvement.
- Designed UI and API Creations to enhance the user experience and make it easier for students to access the platform's resources.
- Developed an efficient database and architecture design to ensure optimal storage, retrieval, and management of student data and study materials.
- Deployed the solution and provided ongoing support and maintenance to ensure the continued performance and effectiveness of the platform.

#9	Mahilen Technologies, India
----	------------------------------------

Team Size	2
Role	Bus Booking System (API Integration,Full Stack Developer)
Technologies	Visual Studio .NET2010, ASP.NET, ADO.NET,Internet Information Server, My SQL Server 2019, JSON

Project Description:

The Online Bus Ticket Reservation System is a web-based application designed to streamline the process of bus ticket booking and management. It enables customers to easily reserve and track bus tickets online. The system maintains a centralized database containing customer information, bus schedules, and reservation details.

Responsibilities:

- Requirement Analysis
- Analyse user requirements
- Design the application architecture and develop the user interface
- Implement payment gateway integration
- Create reports using data visualization tools
- Develop and design the database architecture
- Deploy the solution to the production environment.

#10	Bombay Dyeing – Mumbai, India
-----	--------------------------------------

Team Size	40
Role	Database Design,Front End Design & Document Management System
Technologies	Visual Studio .NET,C#, ADO.NET, Internet Information Server, SQL Server, XML

Project Description:

In Bombay Dyeing, we have successfully implemented an enterprise document management solution that is integrated with Oracle HRMS, finance, and CRM applications. Currently, Bombay Dyeing is operating in a fully paperless environment with a fully functional workflow integrated with Oracle ERP. I was responsible for designing the solution for the DMS as well as the architecture for the integration. This s In Bombay Dyeing, we have successfully implemented an enterprise document management solution that is integrated with Oracle HRMS, finance, and CRM applications. Currently, Bombay Dyeing is operating in a fully paperless environment with a fully functional workflow integrated with Oracle ERP. I was responsible for designing the solution for the DMS as well as the architecture for the integration. This solution was implemented in 12 departments of Bombay Dyeing with more than 70 users.

Responsibilities:

- Requirement Analysis
- Conduct user requirement analysis
- Design the application architecture and develop the user interaction application
- Create reports according to user requirements
- Demonstrate the product and consult with the user in tri-weekly iterations
- Deploy the solution and organize support as required

#11	Air India
-----	-----------

Team Size	25
Role	Database Design,Front End Developer & Document Management System
Technologies	Visual Studio .NET,C#,ASP.NET, Internet Information Server, SQL Server, XML

Project Description:

CP Tracker is a software application designed to automate the process of tracking Container-Palette transport messages. The application receives and processes these messages, scanning and parsing the data to extract relevant information, and stores the data in a database for future reference. The application runs in the background and can be installed on any computer connected to the intranet.

Responsibilities:

- Requirement Analysis
- Analyse user requirements and design the application architecture.
- Develop the GUI design
- Implement the application using appropriate programming languages and technologies
- Debug and test the application to ensure it meets functional requirements
- Design and implement Crystal Reports for presenting all reports
- Deploy the application and provide support and maintenance as required.
- Database design

#12	S.K. Agencies
-----	---------------

Team Size	20
Role	Database Design,Front End Developer & Document Management System
Technologies	Visual Studio .NET,C#,ADO.NET, Internet Information Server, SQL ServerXML

Project Description:

The Dealership Communication System facilitates communication between various dealers and manufacturers. It enables the transfer of day-to-day information between dealers and manufacturers, which aids in making important management decisions. This system also allows dealers to place online purchase orders for vehicles and parts.

Responsibilities:

- Requirement Analysis
- Analyse and design requirements
- Develop XML parser to convert database tables into XML file format
- Design the user interface
- Code and debug the application
- Test the application
- Deploy the solution.
