CORE COMPETENCIES

- SDLC/STLC
- Automation Governance
- Requirement Gathering & Analysis
- Test Cases
- Project Planning & Execution
- Defect Management
- Incidence Development
- Testing Documentation & Reports
- Cross-functional Coordination

ACADEMIC DETAILS

- **Masters Degree in Software Engineering** from Thapar Institute of Engineering and Tech., Patiala in 2022
GPA – 7.62/10

TECHNICAL SKILLS

Robot Framework
Selenium, Java

Postman, Swagger,
Shell, Linux, JSON

Diameter Protocol
JavaScript, Cypress

Wireshark Network Packet
Capturing Tools

GIT and GITHUB, MySQL

Agile Framework, JIRA
TestNG, Cucumber, BDD

SHREYAS VYAS

TEST ENGINEER

*Decisive, strategic and performance-driven professional; targeting career in **Testing** with an organization of repute preferably in **Telecom/IT industry***

Preferable Location: Gurugram/Indore

PROFILE SUMMARY

- Achievement-driven professional with **over 2 years** of rich and extensive experience in Software Testing
- Expertise in **managing software testing lifecycle** involving requirement analysis, system study, designing, defect tracking, debugging, project sizing, status reporting, maintenance & documentation
- Proficient in **preparing & reviewing test plan**, test estimation, traceability matrix, risk mitigation plan, test cases, test execution, test results, and other activities like test data & daily status reports
- Skills in **designing automated test scripts/ cases** that are reusable
- Capabilities in **gathering & understanding requirements** of clients & stakeholders followed by translation into functional specifications as well as provisioning of suitable solutions
- Rich experience in **working with customers, senior management, vendors** and technical teams for interpreting business needs and translating the same into technical & operational requirements
- Aptitude in **managing complex technology projects** and in managing multiple stakeholders, priorities, resources, escalation & risks throughout the project lifecycle

WORK EXPERIENCE

Jul'22 – Till Now | Nokia Networks and Solutions India Pvt. Ltd., Gurugram

Growth Path:

Jul'21 – Jun'22: Graduate Engineer Trainee

Jul'22 – Till Now: Associate Automation Engineer

Role as Associate Automation Engineer:

- Interacting with clients for requirement gathering, system study & analysis
- Executing automated test suites to validate software functionality, identifying defects, and ensuring that software meets quality standards
- Collaborating with software development and quality assurance teams to design effective and comprehensive test cases & test scenarios
- Utilizing strong analytical and debugging skills to provide resolution and troubleshooting assistance for customer-reported functional issues
- Working closely with team members to help build platforms that streamlined the implementation & testing of functional features on VNF (Virtual Network Functions)
- Generating test cases for script testing, followed by automation, and performing test case executions across extensive, distributed groups, while also contributing to issue resolution through troubleshooting
- Crafting shell scripts to automate manual tasks

Role as Graduate Engineer Trainee:

- Generated and executed test cases using various tools, such as Robot
- Conducted network operations involving both 4G & 5G technologies, encompassing data, voice, SMS, and MMS services

SOFT SKILLS

- Analytical
- Collaborator
- Communicator
- Interpersonal
- Team-Oriented
- Problem-solver

PERSONAL DETAILS

Date of Birth: 24th February 1998

Languages Known: English & Hindi

Address: M.DJain Colony Sanawad
– 451111, Madhya Pradesh

- Designed and ran functional test cases to validate customer features
- Provided customer support in the 4LS team as mentioned below:
 - Offered customer assistance in addressing concerns related to various functional features
 - Recreated customer-reported issues on local platforms to facilitate troubleshooting
 - Verified successful creation of a Notification Server through API Testing using JSON

PROFESSIONAL PROJECTS

Project Name: Distributed Large Group

Duration: 1.6 years

Team Size: 15

Project Description: The project involved testing functional features for Vodafone UK customers. This encompassed the execution of network calls, including 4G, 5G, data, voice, SMS, and MMS calls. Additionally, conducted integration testing, evaluated features for other clients such as Verizon and Sunrise. This testing process demonstrated seamless functionality, even when handling a large volume of devices, such as mobile handsets, each with a suitable subscription data plan.

Furthermore, contributed to the project by developing a shell script designed for platform installation. This script streamlines the execution and testing of the Distributed Group feature, automating the installation of three Linux machines, thus enhancing the project's efficiency and effectiveness.

Role:

- Developed test cases for functional attributes
- Automated test cases utilizing the Robot Tool and carry out network calls via the Diameter Protocol
- Assessed and confirmed the functionality of the feature
- Analyzed logs and troubleshoot to rectify any functional issues
- Generated JIRA and Confluence Pages to document information and ensured the accurate verification of test cases
- Facilitated knowledge transfer to new team members for a comprehensive understanding of the feature
- Reported functional issues by raising them in the created issue tracker Confluence Page
- Investigated and resolved platform-related issues
